JJ you're about as dippy as they're made these days. One of us says he beleives that it's important for hams to learn to do morse code because it's a good, really simple and viable communications mode for hams, and suddenly you've got us all packaged up as ogres. You haven't a single clue, and you'r so far off that you have no clue that you have no clue. Probably a good thing, dipschitz like you, if intelligent, might be something of an annoyance. As it is you come in somewhere below a gnat.

Evidently you skipped code or you'd have some idea what ham radio would/will be without it. NO? no surprise, coming from you. That leaves you clueless, but we already knew that.

Unless I missed something, the Tech written includes NO information
on HF or HF operations, and FCC earlier stated that no HF privileges'
would be accorded to licensees who had not passed a written containing
material pertinent to their privileges.

Obviously today's FCC may have changed all that.

Simply stating the facts as perceived in terms of the membership's views.
This is NOT NCI's issue though ... though, as I have said over and over, I
personally would hate to see the digital/CW sub-bands overrun by SSB.

Your position as to Digital/CW subands is well documented, Carl. I was
simply quoting the "official" reply comments of NCI to the NPRM. It seems
pretty clear that, in general, they will be very soft on this issue. Maybe,
with your influence, you could convince them otherwise.

Studying the propagation before, during, and after the contest indicated
that the best results would occur on CW. The experience of our club bore
that out. Our SSB stations tried both tactics, i.e. camping on a frequency
to run stations and hunting and pouncing. Productivity was quite low on
SSB. It picked up the second afternoon but was not good. Our CW stations
also used both tactics and produced a high number of QSOs both ways
throughout the event.

I operated both SSB and CW modes for our club. Despite the fact that I am
NOT an experienced CW contester and that my CW ability is rather weak, even
I made far more contacts on CW even though I spent much more time on SSB.

Since the number of hams is growing FASTER than the general population, our current system IS working and we are using the right "bait." All you have to do is check the statistics that have been published several times on this newsgroup. So the documentary evidence supports the conclusion that we are already doing the right things.

The Bugs Bunny character in the Warner Bros. cartoons used this in lieu of "moron." So in the context in which it was used, it is indeed a put-down.

The Technician class license does not require passing a code test. Removing the code test entirely, therefore, should have no effect on technical skills.

Since Techs may currently earn HF privileges by passing a morse test, there are indeed HF questions on the Tech written. Get a copy of the current "Now You're Talking" and read it and the question pool. The old Tech+ operators and the current Tech with code certification get some voice on 10 meters and some CW on 10 meters, 15 meters, 40 meters, and 80 meters.

"Carl R. Stevenson" wrote ...

You asked me if I thought that Morse was "obsolete." For other than recreational use, I think that's largely so. Does that mean I want to ban/limit/restrict its use? No, of course not. And yes, the conversation/debate here has ALWAYS been about the TEST, and that's what all the fuss has been about. Some CW enthusiasts believe that the sky will fall if Morse testing is dropped. (More like they will have to share "their" bands with more folks and they will have to do their own "recruiting" of new Morse fans to ensure that they continue to have someone to communicate with in that mode as the actuarial tables take their toll on existing, code-using hams ... and I am NOT trying to "rush along" any OTs, just talking "facts of life" when I mention actuarial tables.) Another factor is that SOME folks (Dick, Larry, and others, actually BELIEVE that their Morse proficiency makes them "REAL HAMS" and that those who are not interested in, or proficient in, Morse are in some way "lesser beings." Morse is "obsolete" in the following way: It has been supplanted, in virtually every service except ham radio (where it has been maintained as a "tradition," "hazing ritual," etc.), by more modern, efficient, reliable, and convenient means of communications. (horse vs. car or airplane, for example) So, in that sense, it is obsolete (in practical terms on an overall basis), though it does live on (and I expect will for a very long time) as an avocation on a recreational basis.

First, please answer my question -- Is CW as efficient a mode as SSB? You went off on your diatribe about testing and got lost in the 50's (so to speak) As to the usefulness of Morse, it still is and will be for a long time to come, as a mode for recreational *and* emergency communications use. (your jaded unsupported specious opinion notwithstanding)

Speaking of obsolete, there's your buddy -- good old SSB -- a mode which has been (borrowing your words) "supplanted, in virtually every service except ham radio ... by more modern, efficient, reliable, and convenient means of communications." and *I* (wink) think it should be retired as soon as possible and we should stop using SSB for EMComm immediately -- I mean after all, it is just about as ancient as it gets in communication terms, right? Why use that ancient old SSB when I can hop on the Internet or bring up VTC or digital and get through faster and farther.

Unless you are a "non-traditional student" at old PSU, you have to take Physical Education classes. My son is taking Karate this semester, as a required course.

It has no bearing on his eventual carreer, yet he may elect to not take it, and not graduate. He has to take some history, to and there are plenty of other classes that have a questionable relevence to his eventual carreer.

Even the Electrical engineers have to take these classes.

The idea is actually sound, as it helps produce a more well rounded individual. It also takes into account that a person may not have the same "core competencies" their entire career. A narrowly focused education may prepare a person for a carreer that eventually dissapears.

>
>Actually, it's the "I couldn't be bothered to become as good as you" attitude
>which is ruining our hobby.

I would be willing to improve my skills in homebrewing, troubleshooting, APRS, VHF, direction finding, and other technical areas. However, the Hams in every club, of the several I've been to, are not interested in those areas.

Its not a lack of resources. Its that Hams don't want to. My local club even has a Network Analyzer and a dedicated shack with radio setps, parts, cables, soldering iron, etc. They have the resources to do the technical activities. They just chose not to do that and to do contesting, antenna setups, and CW.

And its not that I can't be bothered. I would actively contribute in those areas, if other Hams joined me.

>Well, then, once you get your No-Code Extra, we will all be looking forward
>to all those amazing technical advances you will personnaly create for the

Perhaps a change in attitude would benefit the ARS. Hams should have more than just a limited view of contesting, antennas, and CW. If Hams wanted to become good in many different areas, the ARS would benefit.

>However, since the
>NCTA has always claimed that code testing was standing in the way of

Not a valid comparison. It is more like making a child geometry or English Literature or history. These things are considered part of a basic education even though the child might not like it at the time. Later in life, they may find that this introduction led them to an area that interests them as an adult that they end up pursuing as a career.

It is more like the cases where I've talked to friends about music. Several had piano lessons as children. Many of them did not like them as a kid. However, as adults, they always make one of the following comments: a) I'm glad my parents didn't let me quit piano OR b) I wish my parents hadn't let me quit piano. None of the ones who quit were glad that they had quit. All of the ones who had continued were glad that they had done so.

Any physical skill must be practiced to a basic level of ability before a person can properly evaluate their own interest in it let alone its worth to other people.

What's stopping you from doing it on your own with the club resources?
That's why the material is there and books are available. If people saw you
working on it, some would join you. Remember the earliest hams HAD to work
it out on their own.

Our club members have a variety of interests. However we may have only one
or two individuals interested in a particular area. Out of a membership of
150 or so we only have about 5 contesters if you include the casual
participants. We only have two people interested in satellites. We have
about a dozen or so who regularly participate in community service
functions. And so on. No one faults another member if he/she doesn't share
an interest in the same aspects of radio.

Yup, it's a great book. I'm just glad that the ARRL has seen fit to finally reissue it. I borrowed a copy from the club library years ago and have been looking to purchase one ever since.

However, while the government is no longer trying to banish us, they still keep trying to get our frequencies. If carried to the ultimate end, this would accomplish the same thing.

Hey JJ, you have a real name and maybe a callsign? Or are you just here
from the cb group doing a little trolling?

With the current written test, they would not have to actually learn the
material to pass the written test.

>Naturally, this overlooks the fact that virtually every technical advance
>created within the ARS has traditionally been achieved by hams who
>also met the existing licensing requirements

Thats probably not true today. I see the exact opposite in the clubs I've been
to. The Hams that focus on contesting and CW are the ones that dislike the
technical topics. Ask them about contesting, and they will show interest. Then
tell them about a Homebrew project, APRS, direction finding, or other technical
area and they are not interested in that.

>Unfortunately for you, your circumscription of Morse code proficiency as a
>"worthless pursuit" is no more than a highly subjective and flagrantly
>self-serving evaluation made by a person with no qualification to render
>such a judgment.

I know a Communications Theory Proffessor that worked in the Comm theory field
for many years, and has an Amateur Radio license. No mention of Morse code as a
useful Communications mode in the class.

>I challenge you to provide some documentary evidence
>that knowledge of the Morse code is somehow detrimental to the "image"
>of amateur radio operators.

Here is one example where its bad for image of the individual Amateur Radio
operator. Mention to spouse, relatives, or friends that you got an upgrade to
your license class from passing a Morse code test and its likely that they
would say something about you spending too much time in a worthless pursuit.

Here is one example where its bad for image of the ARS. I mentioned that I had
a Ham radio license to someone. He asked me if they still used Morse code. He
also said its obsolete and even the military does not use it.

>The proof
>is your own admission that you cannot use the Morse code. If you could,
>you may have an entirely different perspective.

Once you learn Morse code above a certain speed, you cannot forget it. I don't want to permanantly remember code. Then even if I don't like it, I'm stuck with it.

>actual experience has shown that new hams who come
>into the ARS under relaxed licensing standards tend to be less technically
>involved than ever

I am very willing to do my part on technical projects. I even put an ad for it. I got only two responses. After a lack of resources, I couldn't continue it. If more people were interested, then I would be willing to put in the time and effort to get some of these projects going.

> The concept of "Elmering" has transmuted from
...<snipped middle of this sentence>...
>to simply showing the New Age No-Code Tech which button
>to push to make his HT work.

My local club got some additional funds. They used it to get an HF radio to get more people operating with CW. They said this was part of them "advancing the radio art". The same club members posed for a Homebrewing photo, which they advertise as current. I asked many of the people in the photo if they liked homebrewing. None of them did. Seems like the photo is a little dis-honest.

Perhaps you are not aware of it, but there is a LOT more to the ARS
than just the test for each level. When I was unlicensed, I could have
studied for and passed the Extra exam. But I wouldn't have been much of
an extra.

It is simlar in some ways to driving a car You could read a lot of
information about driving a car, but nothing makes you a good driver
like experience behind the wheel.

>
>> And I say that from personal experience. An Extra *should* be

Just shows how ignorant he is. Special Forces still learn it and use it as
they may need to operate low power and be stealthy.

> Once you learn Morse code above a certain speed, you cannot forget it. I

Specious argument. At 5wpm, it's easy to forget after the test. Even
though higher speeds do lead to permanently remembering it, it's hardly in
the forefront of the brain. It recedes to the background to lie dormant
until wanted or needed. The effect is nearly the same as forgetting since
it will not resurface until triggered by use.

Two is plenty for a first effort. You should have continued. Every journey
begins with the first step. In my areas of interest, I will work with
whoever is interested even if it is only one person.

He might have. What I was thinking about was his habit of dispensing orders with a "make it so" command.

Yaknow, we could really P***s off some people by bringing in a Star Trek thread here. Anyone game?

I'll start.

Was Picard a No-coder, or would he have known Morse?

Was Kirk a no coder, or would he have know Morse?

I say Picard knew Morse code, because of a combined respect for history, and a desire to communicate in extremis if need be.

Kirk was a no coder, because of, well just because. 8^)

Dan, your angst aside, OK? No class of license should be "eliminated by attrition with no renewal available" as that person met the requirements at the time of licensing. Unless amateur radio is done away with altogether, no one should lose their privilege of ham radio.

Well, you're right. We aren't "forced" to pass an exam for a ham license.
However, that's been hotly debated in this newsgroup many times also ;)

And, Dick knows what I meant by my comment. I cannot believe he says he
would not have learned CW if it had not been a testing requirement!

So what? The objective then, if morse is to continue as a
mode of somewhat prevalent use is for YOU, Larry
and others to RECRUIT new hams to the joys and benefits
of morse that you so consistently profess. It's that simple!

> I know that taxes you not a bit, so that means that you don't
> care whether or not hams will be losing it as a viable mode.

Do I care, no more than I do if the game of golf was gone
forever or hundreds of other things that others think is
great BUT do not ask for a governmental support system
to do the recruiting. If morse has the value you keep
preaching then there will be new users...maybe not as many
as YOU would want,but morse ain't gonna go way as
I see it. As long as there's one DX country running CW
only there will be new hams learning and using morse.

> Which shows how shortsighted you
> are, right along with the rest of NCI.

In your opinionany way...

> And yes, FCC too.

That's your problem then...take it up with Bill Cross, et al
then. I'm sure they'll appreciate your commentary on how
shortsighted they are.

> Of course they have far bigger fish to fry

And the sectional charts have the dots and dashes printed next to
the beacons so anyone without knowledge of Morse can decode the id.

I'd rather you not be impressed, but thanks! EmCom was my passion once I realized it was a part of ham radio. I've recently put the torch down (about a year ago), but I worked at the emergency communication level in one way or another pretty much shortly after becoming a ham. I was a mentor in the ARRL's ARECC Course for about 4-5 classes at all levels. I worked a little on the development of the classes, but there was such a myriad of contributors on that, that I pretty much just kept an eye on what was happening there.

I've also been involved in emergency operations and procedures before ever being a ham, so it was a natural avocation.

[SNIP OF GREAT STUFF]

When I was in Navy MARS, that has happened on nets. I used to be net control for our Navy MARS here in the NE Texas area, NNN0YCD. I haven't listened to or been on a MARS net in so long....

>

It concerns me that my post may have seemed to isolate CW as a non-essential in emergency/disaster communication. I did not mean to make it seem so, if I did.

>

Absolutely! As an ARES EC for a short time, and having designed and trained in an "independent" emergency communication group that we were trying to get going, we had all skills involved and CW is most certainly a needed skill!

I'll have to try and comment more later in the week when it's not time to get to sleep!

I'm against that too. BTW, I got my EE degree in England, and you don't
have to go through any of that wholly irrelevant stuff. No English, no
social studies of any kind, no chemistry (which I understand is oftem
required over here).

Guess my Part 97 document doesn't include the section on
ham radio final exams. Please copy us all on where to find it Dick.

> > That has always been the case with ARS.
>
> You continue to show how little you actually know about the ARS.

Strange, even my 1957 ARRL handbook doesn't mention
anything about how and where to take a ham radio final exam.

Cheers,
Bill K2UNK

> stealthy.

Doesn't this seem like an immature comment? They
have manuals on operating pack trains. They have
manuals on all sorts of things. Do you think that
a SF op actually read the manual on constructing
railways?

I don't think that all SF op's get CW training.
They are generally cross-trained in many things,
but I don't think every Green Beret gets CW.
Your generalization about SF is bunk as now
the Marines are considered 1st cousins to the
Berets. :) Do they have to learn CW?

I had thought pilots DID. Does Anyone know?

When was the last time that you used PSK31?

How come everyone always says that all the other
radios will fail and the spark radio will still
be working? What happened to SF op's carrying
sat rigs in addition to HF rigs? Which one
do you think they use the most? I think that they
use their third rig for lo/hi VHF and UHF communications
on AM with the birds flying overhead. So you let
me know if pilots still know CW and receive their
grid coords flawlessly on first try from morse.

bill

I'm still working on the code, so make sure
to flame me. Yet, did you answer my questions?
Or are you just a troll?

If that's true it would seem reasonable that you would be aware that a ham who can
operate a
radiotelegraph station is better qualified than one who cannot. So why aren't youi?

And the less the qualification required to become a ham, the closer they are to being
fully
justified to just dumping us on whatever sliver of spectrum the commercials don'te
want at
the moment. Until the time comes that no one with any sense would be bothered with it

and at that point it's just another version of CB. From that point it becomes an
academic
exercise to watch it completely fade away, replaced by the internet and a few FRS
style
HT's. Oh, ARRL will still be there waving the flag and yelling Gung Ho! over the few
dweebs
remaining.

And since the Extra class license is awarded to illiterates today, your point is at least partly
valid. In past times the Extra class license wasn't issued to people whom the FCC wasn't
pretty sure had the knowledge and ability to function at the top level of ham radio. The Extra class license, at its inception, was never intended to be a entry level license
at all. That you "modernists" conclude otherwise serves to confirm just how far the "dumbing down" of the ARS has gone.

> It won't get
> > you a job bagging groceries.

And definitely that was not always the case. I've landed a couple jobs in electronics on
the strength of my ham ticket, and later partially so, since by that time I also held a commercial
license. But knowledgble administraters used to consider a ham to be knowledgable in electronics.; Again, that it isn't so these days speaks to just how far toward CB the ARS has slid. Youi never saw
CBers beiong viewed as technically competent because of their participation in ratchetjawing.
Sure looks like the same applies to today's voice-only hams!

> As for the accomplishments, those come
> > afterward when you actually start to make use of the privileges the

Ah, yes, technical stuff all! Sure that makes all the difference in the world, fill that log and
become an "experienced" ham, for whatever good it will do you!

So why is is redirected to me, I read it the first time Larry
posted it. So what?

I agree with Larry on one point, about those who whine about the
code testing requirement. When I taught Novice classes there would
for certain be at least one student who would complain about
having to learn the code and would always ask, "why do we have to
learn this code stuff, I don't ever plan to use it," My reply was,

"because it is one of the requirements to obtain a license, if you want the license then learn the code, if you don't want to put forth the effort ot learn the code then you don't want a ham license, you would probably be happier on cb."

But then again, some of the biggest complainers, eventually became the best CW operators.

When my son-in-law(a ham) was deciding which engineering discipline to major in (he later graduated
cum laude in civil engineering) he discussed it with my daughter who suggested that transportation
was a industry that isn't going away, so he became a highway engineer, working on interstate and tollway projects. He has been steadily employed with a large stable national company, and
does very well.
On the other hand, I read a number of electrical and digital engineers lamenting the shipping of their work to offshore areas like India and the middle east (I read that Microsoft is doing that - I wonder who they plan to sell their wares to when all the good jobs here are gone?) where such engineering can be done at far less expense than in the US.

Meanwhile, it's difficult to engineer a road project from the other side of the planet!

So are you suggesting that the ham tests should be upgraded to include chip design and surface mount technology? Those are the technical skills required today.

JJ it's just another minor rrap irritant that you're another dipshit who spouts off
without
having a hint of a clue. No problem,we've had plenty of them here on rrap to date.
You and Kim fit really well together.

Oh, don't think just because you try to be anonymous that no one can find out who
you are. That's been tried here before. If I was interested at all I'd already know.
I'm not, but some others will probably be.

Once again, you prove how clueless you can be. Try paying attention to what goes on in ham radio before you manage to make a complete fool of youself, Hmmm?

No, I didn't keep the codefree Mars cheif's data, why should I? I was disgusted by the entire episode as were most longtime hams who happened to be paying attention. . Clearly you were not.

The fella closed out all MARS CW operation permanently, according to reports from MARS members. So you missed all that? Surprising? Nope.

Who said the goal of ending code testing is the growth of Amateur Radio? I've seen no mention of that from either the FCC or those at the ITU conference. Instead, both seem to be saying code is no longer a necessary radio skill since so few radio operators outside ham radio use it today. This position relates to the basis and purpose of Amateur Radio (97.1a, 97.1c, and 97.1d).

>won't.

John:

Well, if you won't, then allow me. I received my B.S. degree late in
life, having graduated in 1999. During the three years I went to college
at night and worked a full-time, 7-day-a-week job, I obtained a 3.88 GPA,
stayed on the Dean's List the full time, and graduated Summa. Many
times my professors complimented me on my work, saying that the
papers I submitted to them were of higher quality than even those they
had seen from graduate students. In fact, they told horror stories of
grad students submitting papers that were barely written in recognizable
English -- to the point where in one particular class several Master's
degree candidates were dismissed from the program and an investigation
started as to how they were granted Bachelor's degrees and subsequently
accepted into the Master's degree program. Apparently, if an honest
and objective evaluation of our colleges and universities were made, we
would, indeed, find alarming evidence of the "dumbing down" of our
educational system.

>Nevertheless, I have worked with people who held engineering
>degrees yet could not compose a coherent memo for circulation in their
>own department.

I experienced the same situation all throughout my Air Force career.
I had only an Associate's degree at the time, but frequently found myself
having to do most of the reading, writing, reasearch, and ultimately
decision-making for my allegedly college-educated officers.

I don't recall anyone here ever attempting to make such a comparison.
A ham radio license is merely a document conferring operating privileges.
It is a license to learn and grow. Unfortunately, it doesn't always produce
that outcome.

Arnie:

Worry not, help is on the way! When the FCC finally acts on WRC-03 and
drops the code testing requirement, the ARS will suddenly be filled with
eager, computer-literate, technically-inclined young newcomers to ham
radio who will invent, develop, and deploy the amateur radio version of the
broadband infrastructure now available to anyone who owns a cell phone,
wireless PDA, or Wi-Fi equipped laptop. We will be communicating by
voice, data, and image, all with no need to purchase "minutes" of air time
or enter into expensive contracts with service providers. Once relieved of
the requirement to learn that obsolete old Morse code, we will see, as
promised for years, a technical revolution in amateur radio the likes of
which nobody could have imagined in the bad old days of being tested
for competence in "beeping."

I can hardly wait!

JJ:

I will not presume to speak for Dick, but I think your comment regarding my "zeal" for CW is a bit overstated. I *like* CW, and I use it a lot, but I don't have what I would describe as any particular "zeal" for the mode. The truth is, for at least the last three years, most of my operating has been in digital modes, mainly PSK-31 and RTTY. However, since I possess reasonable (20 - 25 WPM) proficiency in Morse code, I am always able to fall back on CW when conditions don't permit me to continue effective communication on PSK-31 or other digital modes -- and believe me, I have encountered that situation many times. You see, my ears and brain can continue to make sense out of CW signals that are severely degraded, long after my digital software gives up and only prints gibberish on the screen. Moreover, if I were a better CW operator than I am, I'm sure that I would experience an even more dramatic demonstration of this effect. Therefore, I am a firm believer in the Morse/CW mode, and believe that the best way to cause radio amateurs to become proficient in this mode is (or was) code testing as part of licensing requirements.

I did not become a proficient CW operator out of any particular love of Morse code. It was the requirement to learn it in order to obtain full HF privileges that caused me to learn it, gain operating experience in it, and eventually to become convinced of it's practicality and indispensability among the operating skills that a fully capable radio amateur can possess.

>
>Dee D. Flint, N8UZE

A very cogent observation, Dee. The irony is, at the low side of a solar cycle, when the geomagnetic activity subsides along with the solar flux, the use of CW permits communication even though there isn't good enough propagation to pursue reliable SSB operation. Therefore, the one thing that could keep them active on-the-air -- knowledge of the Morse code, won't be within their capability because they had no incentive to learn it.

Apparently Kirk did know the Morse code, since he was able to copy the
"SOS" being sent by antique space ship from Earth full of the genetically
enhanced people in suspended animation in "Space Seed."

>
>I'm sure that's true for some. I'm also sure it's not true for all.

The funny thing is, John, that the ones for which it isn't true are apparently nowhere to be found among the typical newcomers to the ARS these days.

>The average computer-literate, technically involved people tend to be
>able to, for example, assemble a computer from its basic elements
>(case, power supply, motherboard and perhaps some daughterboards),
>connect the peripherals, install an OS and other software without a
>dozen calls to a tech support hotline, and end up with a viable
>working machine.

I could do all that, and I don't consider myself to be particularly "technical" as far as computers are concerned. That's just simple assembly -- a mainly mechanical skill.

>Folks who can do this are technically involved in comparison to the
>folks who don't even know which port the monitor plugs into. They
>aren't technically involved in comparison to the guy who designed the
>motherboard in the first place. However, even in the industry, very
>few people do component level repairs on motherboards and
>daughterboards any more. What of it? Who do you know that's designed
>and built a multi-band HF rig lately? Some have, of course...most of
>them work for Kenwood, Icom, Yaesu, Alinco, etc.

Component-level repairs aren't done these days mainly for economic reasons. The labor cost involved in trouble-shooting a board at the component level would exceed the value of the component probably long before the fault was diagnosed.

>Of those that are able to do component level repairs on computer
>equipment, they probably have much of the knowledge needed to pass our
>written exams, except they lack the specialized knowledge of RF.
>Certainly, though, it would seem they have the capacity to learn it -

>hundred years old and tell them this is our lowest common denominator,
>I have no doubt that it causes a lot of people to think, "@#$&%^*
>that!" and find another hobby...perhaps they already have one.

Well, that reaction to having to learn Morse code would only indicate
that they're not at all serious about becoming fully capable as radio
amateurs. Nothing new there.

Those with genuine technical skills, who come into ham radio with
or without Morse code, are perfectly OK by me. My problem begins
when they go out of their way to whine about the code testing
requirement, and make all the usual inane NCTA arguments about
the code itself causing technical ignorance. If they simply go about
the business of pursuing ham radio to the extent that they desire, and
leave out the childish whining, I am more than willing to stand in awe
of the advanced technical skill they demonstrate -- when and where
it is, in fact, demonstrated.

You have to keep one thing in mind here, John -- I didn't start the
code testing debate. The anti-code test whiners did, with their
specious arguments and inane comparisons of Morse code proficiency
to everything antiquated and obsolete -- without having any first-
had knowledge or experience to give them a basis for their self-serving,
usually parroted commentary. If any of them had been willing to invest
a fraction of the time and effort in learning the code as they did in
railing against it, they may be singing a different tune, indeed.

>not size really matters?

Because I couldn't care less about what Kim thinks about "size," or
anything else, for that matter. All she is interested in is defending her
lack of motivation to learn a useful communications skill like the
Morse code.

> short end.

I'm not sure I can fully agree with that since the written tests do
require at least rudimentary understanding of scientific concepts like radio
waves, RF exposure, atmospheric affects on radio waves, and so on (all found
in even college level science textbooks, including Ohm's Law).

No, it isn't hazing, hazing is attempting to force someone to do
something unnecessary to acheive a goal. Learning and passing the
code test is necessary to obtain a ham license. I simply stated
that fact. The choice was entirely up to the student.

I would guess that if you snipped the wire in your transceiver to
open it up to receive and transmit on all HF frequencies, but you
never transmitted out of the ham bands, no one will ever know or
say anything to you about it.

In article <BB37CF4A.1EB1E%stewart@say.net>, Dwight Stewart <stewart@say.net>
writes:

> Who said the goal of ending code testing is the growth of Amateur Radio?

Some, but not all, nocodetest folks have claimed that the (perceived) lack of growth of the ARS is one reason to end code testing. IIRC, Cecil and Mr. Anderson have repeatedly claimed that the Technician license (without its code test) is the only thing that kept amateur radio in the US from experiencing a severe decline in numbers from 1990 to 2000. As if none of them would have gotten a license if they all had to learn code for the ticket.

>I've seen no mention of that from either the FCC or those at the ITU
>conference.

It is a constant theme. The RSGB has repeatedly cited lack of growth as a major concern of theirs, and blamed it on the code test.

>Instead, both seem to be saying code is no longer a necessary
>radio skill since so few radio operators outside ham radio use it today.

That's another argument entirely.

Of course hams DO use Morse code quite a lot. It's a mystery why what is done in other radio services should count more than what hams do, when it comes to figuring out the requirements for an amateur license.

>This position relates to the basis and purpose of Amateur Radio (97.1a,

Agreed.
>
> Kirk was a no coder, because of, well just because. 8^)

Wrong. Kirk knows Morse.

There was the original ST episode where they find the "sleeper ship" contianinf
Kahn (Ricardo Montelban) and all his crew in hibernation from the 21st century,
and proceed to wake them up.

They find the sleeper ship by means of its radio beacon, which is sending CQ
over and over. Uhura (didja know she only had the one name?) of course knows
what it says and starts reading it for Kirk, but he says "I'm reading it too,
Lieutenant".

Then, there was the film "Fantastic Voyage"

Kirk, McCoy, and Scott all copied Morse code when Sybock threw them in the
brig in 'The Final Frontier.' BTW, Spock sent the code by tapping out "stand
back" on the wall before he blew a hole in it.

You only have to attend a field day to see that there are only a small group of serious CW ops, and they don't include all of the 20 wpm Extras, even. As someone rightly pointed out, I passed 20 wpm and I am not atall competent at CW. And no, that doesn't bother me. Actually, it's been this way for many years. I've been licenced for 'only' 23 years, so I can't remember it not being a minority interest.

The fact is that those who were forced to learn it and found that they liked it won't be replaced. In fact, that's pretty much how it is already, since 5 wpm doesn't really count. I still come across people who want to learn CW irrespective of when the test will go away, and those are your future CW ops. They are fewer in number because _coercion_ is being removed, but they exist. The fundamental problem I have with Dick and Larry is that they favour using coercion to get people to learn CW. Did they never hear of the saying 'you'll catch more files with honey than with vinegar' ?

Perhaps because the military doesn't train its radio ops in Morse any more?

(This is true ... my youngest son is a Radioman in Navy EOD ... never
learned
a single "dit" or "dah" ... the military only trains a very few "intercept
operators"
at a joint services school at Ft. Huachuca ... at least that's where it was
last I
knew ...)

Mike ... it wasn't me who brought the "Forest Gump" comparison into the debate ... IIRC, if you look back, you'll find that it was Dick or Larry.

I wasn't really serious. However, if you use ASL you better hope that a deaf American is watching. There is also an international sign language, which is completely different.

So could FSK RTTY, *IF* it were run at comparable symbol rates to,
say 20 wpm, OOK Morse ... there is nothing "magical" about Morse
and the insistence on using "wetware" instead of software to do the
decoding is an anomaly of ham radio.

This "do it the hard way, rather than the smart way" approach to things
that is held by so many hams leads to stagation, backwardness, etc.

For example, EME can be done, with proper modulation and coding
with much less power/antenna gain than with OOK Morse ... allowing
much more modest stations in terms of power and antenna systems to
"make the path." However, "tradition" seems to dictate that EME
must be done "the hard way" ... with brute force power, antenna
systems that most hams can't construct (for reasons of lack of space,
zoning, or just plain cost), and manual decoding of the signals ... to the
"traditionallists," anything else is somehow equated to "cheating."
How ridiculous!!!!!!!

> > What if you are unsure of the amount of time that you will be without
> > power and don't want to put the additional load of a computer on your
> > power source?

The credo of emergency preparedness is the same as the Boy Scout's
Motto "Be prepared." HAVE backup power source(s), backup equipment,
and backup operators available ... have a well-thought out PLAN for a
wide range of scenarios. DON'T rely on cobbling together a Morse rig

from scraps and running it from a generator powered by a hamster running on a wheel.

That seems to be urban myth ... my youngest son is a Radioman in Navy EOD ... a special unit that's one notch below the SEALs ... NO Morse training.

If they USE Morse at all, it would likely be sent and received by machine as very high-speed bursts to send relatively short messages that would be "low probability of detection" and very difficult to DF because the bursts would be so short. (I don't know that they use this any more ... it was available, but uncommon, back in 1990 when I left Rockwell-Collins Defense Communications for the commercial sector. It's probably been supplanted by FSK, since at equal symbol rates that has about a 9 dB weak signal advantage over OOK Morse and it's actually simpler to encode and decode in hardware/software.

The Morse IDs on radionav beacons send so slow
that it's easy to write down "dots" and "dashes" and
use a laminated "cheat sheet" to decode the ID and
make sure it's the beacon you want.

\

Yep, someone convinced them that it was no more than a "hazing ritual" and dips like JJ who claims to be as longtime ham but knows so little about what's happened in the interim to be even conversant about issues, offered all their support.
Tha hobby is in sad shape and is being held up like Atlas holding the world by hams who have taken a code test. When all you have left is the Loyd Davies, well I doubt that statement even needs finishing.

I don't think there is any point missed at all. I think that those who
oppose the test know very well that elimination of the test will
eventually eliminate use.

That would true be if one bothered to actually learn the background information on
the
questions that are in the pool. Most don't, since the objective is to pass the test
and
get the license. Learning is not a requirement.

Er, Dick ... you over-inflated, Morse-prowess-based ego REALLY shows
in the above comment.

First, I don't believe that "Tha hobby is in sad shape ..."

Second, if it *were* it would be largely because of the narrow-minded,
backward, egotistical sort of thinking that you express above.

Now we've got DICK trying to invoke the actuarial tables.

Do we need Dann to weigh in on this?

1285. Smells like type acceptance

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-14 17:45:22 UTC
From: k0hb@arrl.net
Message-ID: <e79dbd9b.0307140945.358719a3@posting.google.com>
Source record: 71072

I was under the impression (apparently mistaken?) that a licensed amateur could possess any sort of equipment (commercial, homebrew, converted surplus) or whatever. I know of no rule against MODIFICATION of equipment, even if that modification permits operation outside the amateur bands. The rules properly speak to signal purity, staying inside the assigned bands, etc., etc., but do NOT seem to prohibit modifications of factory-built equipment. (In fact, I could probably make an argument that the FCC rules ENCOURAGE tinkering and experimentation of this sort!)

However I note the FCC has required at least one licensed ham, Michael V. Swift, KG6QOB, to restore a rig to "original manufacturer's specifications".

("You are directed to have the transceiver returned to the original manufacturer's specifications by reinstalling the jumper wire which the cutting or removal of permits operation outside the amateur bands. The jumper wire must be repaired or installed, and encapsulated with epoxy or similar material to preclude future modification. After the repair is completed you are directed to bring the transceiver to this office so that the repair can be confirmed and related technical measurements can be made.

You have until July 7, 2003 to respond to this inquiry and to provide the repaired transceiver for inspection.")

While I understand the reason for the action (malicious interference and false distress signals on marine frequencies), it strikes me that this particular remedy is not supported by the law, and might set a precedent for de facto "type acceptance" in the Amateur Radio service.

What say, ye lawyerly types?

Yep, if you accept that skill is a type of knowledge. Besides the
skill of actually hammering, there's knowing what hammer to use for a
particular job, knowing how to hold the hammer and thing to be
hammered, and what safety precautions to take.

> waves, RF exposure, atmospheric affects on radio waves, and so on (all found
> in even college level science textbooks, including Ohm's Law).

Not really, Dwight.

Many of the written test questions are about the rules and regs, such
as band edges and power limits. Also symbol identification,
definitions, and other facts. One doesn't have to know what a kHz is
to know that the 40 meter band is 7000 to 7300 kHz. Nor does it
require an understanding of the operation of electronic components to

correctly identify which symbol is, say, a JFET.

More importantly, since the Q&A are all in the public domain, all that is needed to get an answer correct is to identify which of the 4 answers is correct. How this is done by the testee and how much understanding is involved is not a concern of the FCC or VEs as long as there's no cheating involved. Rote memorization, word association, and random guessing are all accepted ways of getting an answer correct. Get enough answers correct and the license is issued.

For example, suppose a question asks for the length of a 40 meter dipole made of wire and offers 4 answers. Someone could learn about dipoles and get the correct answer. Or they could simply learn "40 meter dipole wire 66 feet" with absolutely no understanding of what a dipole is other than that a 40 meter one is 66 feet long. In fact, thinking about that one too much could get you in trouble because '40 meters' is actually about 131 feet.

I never saw much if anyhting about radio in any of the science textbooks I had, grade school through college. I did see some stuff in my engineering textbooks, though. But by then I had been a ham for 5 years.

You haven't even started, the list of engineering feats pulled off by
engineers who are hams is endless. In every case I know about however
including those you cite they did what they did as professionals
working for money outside the ham bands, not as amateurs. The topic
on the table here is technical innovations which have advanced the
state of the art in the field of RF comms made by engineers working
within their roles as hams. Let's see your list of those. I'd be
particularly interested in your list of ham engineers who wouldn't
have made those contributions if they had to take any code tests.

> Oh, and didn't the hams who

Great PR for ham radio but that's button-punching operational "stuff"
based on aerospace comms technologies which have been under
development since the earliest days of NASA. I haven't heard much
about any mission specialists breaking out soldering irons and doing
any innovtive sorts of things.

>So could FSK RTTY, *IF* it were run at comparable symbol rates to,
>say 20 wpm, OOK Morse ...

And *IF* the operators learn the skill to do so, and *IF* the equipment is
designed for FSK instead of OOK. And if they learn the same RTTY code...

Note that, for the standard word "PARIS", Morse requires 50 time units (where a
time unit is equal to a dit), "5 level" Baudot requires 42 time units if the
stop bits are the same length as the other bits, and 7 level ASCII requires 54
time units.

Note also that FSK does not allow break-in, and requires a 100% duty cycle of
the transmitter. The standard word "PARIS" in OOK Morse has a duty cycle of
44%, so to level the playing field the OOK circuit should have tad over 3 dB
more transmitter power allowed.

>there is nothing "magical" about Morse

Have you actually DONE it, Carl? Not just a paper design - an actual station,
and actual QSOs?

>allowing
>much more modest stations in terms of power and antenna systems to
>"make the path."

OK, fine. Go ahead and do it. Find another ham, or several, who are interested,
and just do it. Maybe Vipul would be interested.

Shouldn't be too expensive or time consuming, since the power and antennas
needed will be much less than those typically used.

> However, "tradition" seems to dictate that EME
>*must* be done "the hard way"

Dictated by whom? I don't see any FCC rules or bandplans disallowing what you
propose. There are hams with RTTY WAC, WAS and DXCC, so there's no requirement
of manual encoding or decoding for recognition by ARRL or IARU. Just go ahead
and do it. What's stopping you, Carl?

>... with brute force power, antenna
>systems that most hams can't construct (for reasons of lack of space,
>zoning, or just plain cost), and manual decoding of the signals ... to the
>"traditionallists," anything else is somehow equated to "cheating."

Y'know, a lot more people could participate in the New York City Marathon if
the "traditionalists" would give up that "ridiculous" distance of 26.22 miles,
and allow the use of roller skates. Or bicycles.

>How ridiculous!!!!!!!

Why does it bother you if some unnamed folks don't see things your way? If you
can do "better", go ahead.

That's how things change in amateur radio - somebody actually goes out and does
it, and shows the way.

Build and publicize a system that will let hams work EME inexpensively with
small antennas, low power and easily-duplicated equipment/software. Pretty soon
those unnamed "traditionalists" will be completely outnumbered.

Have you done it, written it up and submitted it to QST, QEX, CQ, Worldradio,
etc., and been rejected?

>> > What if you are unsure of the amount of time that you will be without

>
>The credo of emergency preparedness is the same as the Boy Scout's
>Motto "Be prepared." HAVE backup power source(s), backup equipment,

>and backup operators available ... have a well-thought out PLAN for a
>wide range of scenarios.

Sure. That's basic.

But there will always be scenarios which are unforeseen, and people's resources are limited. Particularly when they have to pay their own way and invest their own time.

Just as not everyone can have a big gun EME station, not everyone can have backup power sources adequate to run a complex station indefinitely. Or even for an extended period of time. Nor can everyone invest in backup equipment that sits unused for years. Nor can volunteer operators be counted on to always be available in an emergency.

We all "should" have emergency preparedness as a priority, and a plan for same. Particularly after 9/11. Yet all plans have their limits. Look at what happened to the communication with firefighters in the twin towers on that terrible day.

>DON'T rely on cobbling together a Morse rig

There's more to assembling a computer than mechanical skill. For one
thing, you have to know what's compatible with what. When you choose
the motherboard you'd better make sure that, for example, the RAM
modules you buy to go along with it are compatible with that
particular mommyboard, or you can forget having a working machine when
you've bolted everything together. Many motherboards support a variety
of CPU chips and have jumpers which must be set to compensate for the
chosen chip - set the jumpers wrong and you wind up with a
paperweight, possibly one containing a grilled silicon sandwich.
There's a lot of mechanical assembly type bullwork involved, sure, but
there is specialized knowledged involved too. You might be able to
train a monkey to physically assemble it, but said monkey probably
wouldn't produce a machine that actually works - merely one that
looks like it *should* work because all the parts appear to be in
their proper locations.

>Component-level repairs aren't done these days mainly for economic
>reasons. The labor cost involved in trouble-shooting a board at the
>component level would exceed the value of the component probably
>long before the fault was diagnosed.

This factor is also largely responsible for a decline in homebrewing,
in my opinion. In this day and age, Americans work more hours than
ever - more than in any other country in the industrailized world, in
fact, according to material I've seen reported in the media recently -
and have less and less time to spend breathing solder smoke while
assembling a widget that can be purchased assembled, tested, and
working for less than it would cost to buy the parts and a roll of

solder. Even if you or I had the knowledge and skills to build a Kenwood TS-2000 from a bag of parts, we'd never be able to buy the parts for less than Kenwood can because we'd be buying in much smaller quantities and paying a lot more than Kenwood buying in bulk. The time spent building it...well, by the time *I* finished assembling mine it would probably be obsolete.

This doesn't apply to certain other components of a ham station. One can still often build his/her own antennas for much less than the cost of buying a commercial offering of similar design. Thus it is no surprise that antennas are one area in which there continues to be much homebrewing activity in the ARS. I've built a few myself - including a J-pole made of 450-ohm twinlead that I can Roll (pun intended) up and put into a sandwich bag and drop into my emergency comms jump kit (which is where it currently is located).

I also have a 5/8-wave 2m ground plane in my stash of emergency gear, along with about 20 feet of masting and a couple of different mounting options...but the rolled up J-pole can be hung practically anywhere, its bandwidth is wider than the whole 2m band, and like the GP, it beats a rubber duck hands down.

<SNIP>

>of the advanced technical skill they demonstrate -- when and where
>it is, in fact, demonstrated.

Once again, current testing requirements include a no-code license (Technician). Thus, the code requirement does not keep people out of ham radio, it merely keeps them off of the HF bands. This was not the case prior to the creation of the no-code license, and apparently, this will not be the case for very much longer, either...in some countries, it already is no longer the case, in fact.

Of course, since Technician is an entry level license, it's not really to be expected for a newly licensed Tech to posess advanced technical skill, though there's no reason why some wouldn't. In the end, though, I keep coming back to the same conclusion - it isn't the license class that matters, it's what one does with the privileges the license conveys. Rhetorical question: Who makes the more meaningful contribution to the hobby, the BSEE with a 20 WPM Extra who hasn't been on the air in years, or the no-code Tech who is active in the local ham radio club, pays his ARRL dues regularly, shows up for Field Day and works his tail off all weekend, and is halfway to VUCC on six meters?

>railing against it, they may be singing a different tune, indeed.

As far as I know, the code testing debate started in the mid-1970s when FCC first proposed what was then known as a Communicator class license. If I recall correctly, that license basically would have conveyed privileges on 70cm sans a code test. The idea was shot down in flames, primarily because of strong opposition from ARRL.

Well, times have certainly changed. We've had a no-code license for a long time now, we're on the verge of having no code testing at all, and even ARRL hasn't registered any strong opposition - that opposition seems to come from primarily either (1) people who feel that if I had to do it this way so should everybody else, and (2) people who seem to feel that code proficiency somehow makes them more qualified technically to operate a ham station than people who aren't code proficient.

I happen to disagree on both counts. CW is a valid skill, and I'll be one of the first to disagree with anyone who claims otherwise, but the lack of Morse proficiency does not affect the ability of any ham to operate in any of the other modes we're permitted under Part 97. Furthermore, being a practical operating skill, it has no more bearing on a ham's technical proficiency than knowing (or not knowing) how to bust a pileup (for example)...you don't really need to know Morse unless you're going to operate CW. You don't really need to know how to bust a pileup unless you're going to try to do so - and not knowing how to do so won't make it any harder for a ham to engage in casual ragchewing.

I agree with you entirely on one point, though...every minute that we spend arguing the point in this NG is a minute we could have spent on ham radio. In the case of those who find it necessary to post hateful comments about their fellow hams based on a lack of tolerance with respect to others having interests in the hobby that differ from their own, I'd say that's definitely a good thing - better to have their drivel here on Usenet than on the airwaves.

If the deck was thus stacked against the SSB stations from the
beginning, then the results should come as no surprise. Nevertheless,
the phone stations did, in fact, still manage to make contacts.

>The experience of our club bore

You're entirely welcome. To explain my comment...so much of your
participation in this NG seems to be wasted on sniping at Larry and
Dick, that I was pleasantly surprised to read that particular post, in
which you made a number of good points about emergency communications,
even if you couldn't resist the occasional shot at the aforementioned
two targets of opportunity. ;-)

>EmCom was my passion once I
>realized it was a part of ham radio. I've recently put the torch down

>
>I've also been involved in emergency operations and procedures before ever
>being a ham, so it was a natural avocation.

We share a common interest here...I always had an interest in public
service and emergency services - so naturally, once I expanded my
radio hobby activities to include amateur radio, I gravitated to the
emergency/public service sector of the ARS at once.

>It concerns me that my post may have seemed to isolate CW as a non-essential
>in emergency/disaster communication. I did not mean to make it seem so, if
>I did.

Well, more like you left it out because it wasn't germaine to the
point you were trying to make. Having read previous posts where you
demonstrated an understanding that one never discounts any valid means
of communication in EmComm, I understood where you were coming from,
so I took the liberty of putting back in what you left out.

>
>I'll have to try and comment more later in the week when it's not time to
>get to sleep!

I look forward to it. I'm going to have to cut my own session short,
in fact. In about an hour, our club's public service ops are doing the
radio comms for a parade, and since I'm one of the two
co-coordinators, I need to shut this computer off and get down to an
entirely different sort of post. TTYL.

Incorrect. They could always accept the evidence presented by an
experienced CW operator.
>
> Actually, all that's really required is a receiver.

With an antenna.

> If there are a few
> dozen CW QSOs going on at the bottom of the band, but nobody in the
> phone portion of the band...

How about if there are more CW QSOs going on than 'phone?

> well, why would you think that would
> happen, unless there's a CW contest going on?

Coupla possible reasons:

1) Propagation isn't so hot. (CW really does have an advantage over
all commonly-used forms of analog 'phone in this regard)
2) There's a 'phone contest going on, and most of the 'phone ops are
working the contest - on another band.
3) The 'phone bands become obnoxious enough that folks go to CW just
to have a decent QSO.
>

Just "a bit more"? ;-)
>
> >When you get as good as N2EY at knowing CW and examples of its tremendous
> >cabability, get back to us, won't you?

There are plenty of examples which prove the point of CW/Morse's
usefulness. Whether those examples constiute "proof" of the necessity
of a TEST is a matter of opinion.
>
> Knowing them and being able to articulate them in this forum are two

If someone "knows" something but cannot articulate to someone who
doesn't, does the first person really "know" it? Kinda like the old
saying "if you have a thing 'someplace', but you can't find it when
you need it, then you don't really have it, do you?"

since the interference was on marine frequencies it would sound like the
sanction was not specifically aimed at his actions as an amateur licensee.
but rather it was in his guise as a marine radio operator who's radios must
be type accepted and can not be modified that he was penalized. that he
also happened to be a ham was probably secondary, though there is precedent
for non-amateur activities causing the fcc to cancel or not renew amateur
licenses. if he had modified the radio and used it on amateur frequencies

to cause interference there would probably not have been a requirement to 'fix' the radio unless maybe if the modification had caused excessive signal bandwidth or out of band spurs... and then it would probably have been a requirement to make the radio conform to amateur specifications for bandwidths and spurious emissions rather than back to the manufacturer specs. i would say he got off easy, the fcc could have just confiscated the equipement, canceled his license, and fined him and been done with it.

> And you say you're not against the use of the mode, just the test, Carl?
;-)

That's correct ... I am NOT against the use of the mode. Just pointing
out the fact that there are better modulation/coding techniques than OOK
Morse ... that does NOT mean that I mind/care/object to others CHOOSING
to use OOK Morse ... only that I am disseminating some facts that the more
"hard-core" Morse enthusiasts don't like disseminated because they fly in
the face of the "Morse Myths" (like "Morse will get through were nothing
else will.")

> >
> >This "do it the hard way, rather than the smart way" approach to things

> >with much less power/antenna gain than with OOK Morse ...
>
> Have you actually DONE it, Carl? Not just a paper design - an actual
station,
> and actual QSOs?

No, I personally haven't ... yet ... I've been working on other things. But
the fact that *I* haven't personally done it yet doesn't mean it's not
factual.
(I am not so hung up on myself that "my way" and "what I've done" are the
ONLY ways that things can/should be done.)

> Why does it bother you if some unnamed folks don't see things your way? If
you
> can do "better", go ahead.

What "bothers me" is that some folks deny the fact that there ARE better
ways than OOK Morse (apparently in an attempt to bolster their "real ham"

and "everyone MUST know Morse" viewpoints)

What about the fact that many of us engineers who have advanced the
state of the art in the field of RF comms (while working for money
outside the ham bands) BECAME engineers because we were first
interested in radio/electronics by being introduced to ham radio?

> spectrum on 20M?

No ... I have pointed out that most countries of the world do not have
"by-mode" sub-band allocations in their amateur regulations and it doesn't
seem to cause any real problem.

I also (as did Gary Coffman, independently) postulate a strawman design
(but something feasible, never the less) for a system that, in the 150 kHz
of CW/data sub-band on 20m could support a very large number of
20 wpm Morse-equivalent QSOs with virtually no interference.
That was immediately rejected by Morse fanatics, who said something
like:
"We don't want no stinking keyboard mode." (My response was to
make Morse I/O a user interface option. Still rejected.)
"The fun of it is digging the weak ones out of the noise." (My response
was, "You want channel impairments? No problem. I can program
all sorts of simulated channel impairments into the system to make copying
as hard as you want ... without having to trash the underlying, reliable
communications system." Still rejected.)

Some folks just WANT to do things the hard way and want to insist
that others should be similarly constrained.

I also recounted personal knowledge of SS systems that routinely
transmit data reliably over transcontinental distances ... with power
outputs on the order of 10 mW ... as an "underlay" to existing services
that don't even notice that they are there.

But I have always said that I would not like to see the CW/data sub-bands
(whether by rule or by gentleman's agreement) completely over-run with SSB.

Code did slow me down a few years (from 1970 to 76) and one summer in
college I
did the code thing. Well, 5 WPM anyway.... Had to take a receive
test and also
had to send code down at the FCC field office in NYC. Got my tech
(general written
and 5 WPM) in 76. I was suprized, I easily passed the code but nearly
failed the
written (I was a double E student then).

Gee Larry, isn't that incentive enough? Or do you need a government
incentive to make something happen?

> much growth do you think will occur, and how fast?

This seems like a reasonable question, so I'll have a go.

I predict that when Element 1 is finally dropped:

- we'll have a surge of new hams for a year of two. This surge will
consist of growth about 3 times that of the past three years. But it
won't last

- once the surge is over, we'll have a growth rate a little greater
than what we have now. Maybe up to twice the current annual growth,
but probably more like 150%.

- there will be a big surge of upgrades, then a return to almost the
same level as before.

See below for actual numbers.
>
> I predict that there will be no significant growth in new licensees.
> Now, all we need to do is define the term "significant growth." We currently
> have around 600-some kilohams in the US.

Closer to 700,000. Just under 687,000 as of yesterday.

We also have to define "growth" and how it is measured. We're
currently running in excess of 2,000 new licenses a month - offset by
large numbers of expirations. There are also wide swings in the
various numbers because of things like holidays, weather, processing
delays and varying numbers of VE sessions. Just look at the AH0A data
- the numbers wander all around. So it's important to take long-term
averages rather than wild extrapolations of short terms.

I say we define "growth" as increases in the total number of valid US
licenses held by individuals, regardless of license class, as reported
in the thread "ARS License Numbers". And the increases should be
measured in periods of at least a year.

> I'd call a five percent growth
> factor, or 30,000 newly-licensed radio amateurs, to be significant. Let's
> give this a year to happen. I say it won't. How say you?

How about we do our predictions in terms of annual totals:

How many hams a year after Element 1 goes away?
How many hams two years....
How many hams three years...

I say the total number of US hams will grow to 700,000 in about a
year, 710,000 in two years, and then the growth will slow down to at
best 5,000 per year.

Or:

700,000 after 1 year
710,000 after 2 years
715,000 after 3 years
720,000 after 4 years

Etc.

(based on a starting point of about 688,000)

Or to put it another way:

Growth of ~12,000 the first year
Growth of ~10,000 the second year
Growth of ~5,000 the third and following years.

Current growth is about 3,000 per year.

> Keep in mind
> that at this stage of the discussion, I'm just trying to establish reasonable
> parameters -- so let's all weigh in and try to arrive at a consensus as to
> what any future growth could be. Then we can commit to our numbers
> and see who gets it right -- or at least close.

I hope my predicted numbers are too low.

Well, I'm no lawyer, but here goes.

Check QRZ.com - the not-too-swift Mr. Swift is a raw newbie. His
Technician license is dated May 1, and the violations cited are for
May 15. Couldn't keep his nose clean for two weeks.

Sounds like The Commission decided to go a easy because he's a newbie,
and to save themselves a lot of work. We have almost no info on this
person - young, old, rich, poor, whatever. Maybe there was a plea
bargain, such as 'fix the radio so it won't go out of band and we'll

let you keep the radio and your license.' Maybe it wasn't his radio, but on loan from someone else.

Or maybe he's an engineer working on Broadband over Power Lines.....;-)

There are precedents for all kinds of things if the licensee and FCC 'voluntarily' agree to them. For example, some time back a ham under investigation for interference had his license (General, as I recall) 'modified' by FCC so that he was only allowed to operate on HF CW! I think this compromise was worked out because it would be a lot easier for the FCC than the full revocation/nonrenewal game. Plus the guy had never committed any violations while using CW. (Yes, he did use the mode!)

Of course most of the above is speculation as to FCC's actions.

--

As far as I'm concerned, false distress calls should not be treated lightly. If it were up to me, and the charges could be proved, the person(s) responsible would have no license, no radios, and much thinner wallets. But it's not up to me.

Read that sentence carefully:

"I *personally* would hate to see the digital/CW sub-bands overrun by
SSB."

Spread spectrum isn't SSB.

The rallying cry I recall hearing was "no setasides for legacy
modes"...

The discussion you recall, Brian, was an exchange between Carl and
either KE3Z or W1RFI (halfheimer moment has me mixing them up, but I
think it was Jon) here some years back. IIRC, Carl thought that HF
DSSS (direct-sequence spread spectrum) could be overlaid atop, say, 15
meters. His opponent pointed out that even a QRP station with a simple
antenna would lay down an increased noise level to "narrow-band" users
for miles around if that were allowed.

Some basics:

Suppose Amateur A operates a 100 watt 15 meter SSB rig into a decent
vertical. Let's say he is S9+20 dB or louder over, say, a 5 mile
radius, and his signal is 2.5 kHz wide. That is, a 2.5 kHz wide rx
picks up almost all of the signal Amateur A transmits. (Does anybody
see anything amiss with the above numbers?)

Now suppose Amateur A switches to DSSS and spreads that same 100 watts over 250 kHz of the band. For mathematical simplicity, let's assume the power is equally distributed over the 250 kHz, though in reality it will drop off towards the edges and be highest in the center. A 2.5 kHz receiver will now intercept only 1% of that DSSS signal, because it is 100 times wider than the rx passband. So the DSSS signal sounds like noise, but its level is 20 db lower - S9. If Amateur A drops his power to 1 watt, the noise will drop 20 dB more - to about S6.

So we have an S6 noise level within the above area over 250 kHz of the band from ONE station running 1 watt. Spread the signal over the entire band instead of 250 kHzand the noise level drops less than 3 dB. How much weak-signal DX you gonna work with an S5 noise level over the entire band?

Note also that if propagation is decent, it's not unusual to hear S9+20 dB signals from 100-watt-and-simple-antenna stations hundreds or thousands of miles away. What if each one of those signals dumped its own S5+ noise level on you, even though they were running 1W out?

Oooohhhhhh, I see. The FCC and ITU didn't say that ending code testing
would be the end of growth in amateur radio! That really comes as a
surprise! Thanks for pointing that out, Dwight.

It depends on whether you consider colleges and universities as institutions
of higher learning or as job training schools. If the former then the
various non-degreee specific classes are appropriate. If the latter, then
they are not.

But you forget that I consider code one of the fundamentals of a well rounded, basic ham education whether one uses it or not. In many other licenses, there is material required that is irrelevant to a particular individual's goals. It's included because it's one of the basics of the field even if not germane to specific applications.

Actually the fact that other services don't use it very much is a strong argument to require hams to learn it. This is the place to preserve the skill in case of need and to prevent this capability from becoming a lost art. Plus of course the fact that quite a few hams do use it.

One reason that we are able to justify ourselves to the government is that
part of our mission as hams is to be a "pool of trained radio operators."
So since I want ham radio to continue to be allowed, I consider it mission
critical to be familiar with the various modes whether or not I like them.

Absolutely. First of all you have to select the rightr hammer for the job. Secondly if you are going to be hammering a lot, you need to know how to select a hammer with the proper weight and balance to maximize the effectivity of the hammer with a minimum of energy expenditure. Then there is an art to swinging the hammer. Beginners manage to hit a lot of fingers and hands.

1325. ARRL plan, coming to fruition?

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-14 22:53:11 UTC
From: No Dummy Loads <N@e.mail>
Message-ID: <vh6d2ni8aju0d7@corp.supernews.com>
Source record: 71158

The League won't stand in the way of anything if it will allow dumbing down the hobby, and now their plans are further moving forward. Pretty soon one won't even need to take a written test for a license. The League would never propose this openly, but they won't object when someone else does.

Hey League BOD: Thank you for dumbing down the hobby assholes. You were to work to make things better, not worse! New definition for the ARRL handbook: Dummy load: A bunch of hams in the back of a pickup truck.

The "nocodetest folks" didn't end the code testing requirement - the members of the ITU did and the FCC perhaps will. Again, I haven't seen growth of Amateur Radio as a significant reason for their decision.

> It is a constant theme. The RSGB has repeatedly
> cited lack of growth as a major concern of theirs,
> and blamed it on the code test.

The RSGB is neither a governing body in the UK or a member of the ITU. While they offered an opinion, it was only one opinion in many supporting the end of code testing. That specific opinion would have no weight if CW was still a significant communications mode outside Amateur Radio (see below).

> Of course hams DO use Morse code quite a lot. It's
> a mystery why what is done in other radio services
> should count more than what hams do, when it comes
> to figuring out the requirements for an amateur
> license.

The Amateur Radio Service was not created in a vacuum. Its stated basis and purpose extends well outside Amateur Radio. None of those (emergency service, advancement of the radio arts, advancing skills in skills and technical phases of art, a reservoir of trained operators, and international goodwill) are limited to just what happens within the Amateur Radio Service itself (we seldom provide emergency service for ourselves, for example).

Therefore, what happens outside of Amateur Radio must play a significant role in what happens within Amateur Radio. CW was justified as a testing requirement because is was once necessary for a reservoir of trained operators (for the services we could provide outside Amateur Radio). That is no longer true, so the test requirement is now being reconsidered.

Because this path does make sense. There is no benefit in doing a total
overhaul of the licensing structure.

I absolutely did mean it within my narrow definition because the
ongoing argument has been based on a narrow definition. But I should
have been more specific in my post.

It's a very fair & appropriate question as a rhetorical response to
the NCTAs who have been claiming forever that eliminating the code
tests for HF access will result in a new influx of technically astute
engineers. Bilge. Who will put their expertise to work and come up
with "advances in the state of the art" now that they won't have to
jump thru the "code test hoops". More bilge and you know that as well
as I do.

Remember also that according to the FCC rules, the FCC has the authority to modify the operator/station license in just about anyway they see fit. Making him return the radio to manufacturer's spec might fall under that authority.

Obviously building something with a hammer requires knowledge, but even a two year old child can learn to hit a nail with a hammer - the skill.

All requiring far more knowledge than the skill of hitting a nail with a hammer.

> More importantly, since the Q&A are all

Then you dispute the multiple choice method of testing, which means you must also dispute this method of testing when employed by schools and colleges throughout this country and around the world (and the studies once used by those schools to determine this is a sufficient means of testing for educational purposes).

If the FCC is not concerned, why are you? Obviously, the FCC has determined this method of testing is sufficient to meet the goals it has for Amateur Radio license testing. Perhaps you're dissatisfied with this method because you don't truly understand the goals of those license exams. Again, the exams are an entrance exam to get into Amateur Radio, not a final exam to determine ultimate skills and knowledge. In Amateur Radio, the primary develop of skills and knowledge comes after those entrance exams through actual experience.

> I never saw much if anyhting about radio in
> any of the science textbooks I had, grade
> school through college. I did see some stuff
> in my engineering textbooks, though. But by
> then I had been a ham for 5 years.

You're out of date, Jim. Many college science textbook used throughout the US cover these subjects (radio and electronics). For example;

The Sciences, An Integrated Approach, John Wiley & Sons, Inc.
Chapter 5 (pg. 115), Electricity and Magnetism (electromagnetic force, electric circuits, ampere, voltage, resistance, ohm's law).
Chapter 6 (pg. 127), the Nature of Waves (wavelength, frequency and velocity).
Chapter 6 (pg. 139), the Electromagnetic Spectrum (radio waves, induction, radio waves and the atmosphere, ducting).
Chapter 11 (pg. 241), Electrical Properties of Materials (conductors, insulators, semiconductors, and superconductors).
Chapter 11 (pg. 240), Technology (diodes, semiconductors, transistors).

Even many high school science textbooks cover the basics. For example;

Physical Science, Holt/Harcourt Publishing.
Chapter 17 (pg. 420), Introduction to Electricity (electric current, conductors, insulators, ac/dc, resistance, resistors, Ohm's Law, electric circuits, series and parallel circuits).
Chapter 19 (pg. 480), Electronic Technology (semiconductors, diodes, transistors, integrated circuits).
Chapter 20 (pg. 508), The Energy of Waves (amplitude, frequency, wavelength).
Chapter 22 (pg. 568), The Electromagnetic Spectrum (radio waves, am/fm modulation, induction, destructive and constructive interference, the ionosphere).

Carl,

You seem to have moved positions from "the Morse test ought to be
dropped" to "operators who use Morse code are stagnant and backward".

I agree with the first position, but the second position is inflamatory,
divisive, and not supported by a shred of evidence.

With all kind wishes,

de Hans, K0HB

I love that "according to reports from MARS members." Do you *ever* find out and learn anything for *yourself*, Dick, or do you always just rely on others to formulate your opinions?

I am not a lawyerly type (dang that's hard to even spell let alone sound
out), but:

It is my understanding that even amateur operators must have equipment that
is "Type Accepted" by the FCC. Now, not all that sure what that means, as
when one buys new equipment it isn't a concern. BUT, I do know that I've
heard discussions on the air whereby it is said to be illegal to own
"illegal" radios (those CBs that can transmit outside the legal limits of CB

radio) and "foot warmers" (those that have been modified to be able to work outside the ham bands...like, one that was originally for 10M that now works well in the CB range, etc.).

That's correct. Except that folks such as Dick and Larry have such a war
going on that it's completely gotten passed them that the rest of us can
still think of each other nicely--even though our thoughts about different
things may vary and, yes, even though we may get really fired up on each
other once in a while.

Well, I never challenged the point of CW/Morse's usefulness. There's no doubt about the usefulness of CW. (Larry usually either chooses to ignore, or misses it when I have good things to say about CW, though). What I'd never really heard relayed was a real-life story of the claim of CW "getting through" when nothing else would.

I beleive in free choice. If someone wants to study a broad programme they can, but I don't beleive in forcing people to study things they don't want to, at least not beyond the age of 16, and even then only to avoid illiteracy and innumeracy.

My own interests are not atall narrow, but they are eclectic. They include poetry, archaeology and languages, for example. If, however, a poetry class were to be compulsory in an EE curriculum, I feel strongly that it would be wrong. You can't force people to become well-rounded. Force feeding is a poor sort of education.

I do not beleive that it is necessary to make people study unwanted classes to qualify as an institution of higher learning, more that it disqualifies the college.

Dick,

Wow, something we agree on. The exportation of development engineering is quite widespread. Software development is also wholesaled to India by many companies (perhaps you meant that too in reference to digital engineering).

Cheers,
Bill K2UNK

Well, why does it have to be a requirement that hams learn it? An analogy
to your thought above could be:

Doctors should have to be required to know how to use Shaman medicine in
case of need and to prevent this capability from becoming a lost art. (The
analogy works if one believes that alternative medicine works--and I do).
But, you see what I mean, right?

There are groups, societies if you will, that take up and preserve the CW
mode. FISTS comes to mind. There are great guys/gals, long-licensed

amateurs, who love to share the skill with others and who will teach it at only the slightest provocation. There are EmCom "chiefs" who recognize the capability of increased communication benefits when using CW. The list goes on.

Get rid of CW testing. If the mode is all that it is said to be, it will stand on its own. If it doesn't stand on its own, then adapt and adjust.

<begin quote>

COMMENTS SUBMITTED BY PHILIP M. KANE

MANUAL MORSE CODE TESTING

13. From the inception of both commercial (marine) and amateur radio in the early years of this century, Manual Morse Code was the first and "simplest" method of communication, requiring operators trained and experienced in the use of this mode at all points in the circuit. At the time, equipment used by all services was rather crude, and in some cases the amateur service shared large amounts of spectrum with the governmental and private commercial services. It was essential that the amateur operator be qualified in Manual Morse Code in order to recognize signals from other stations with higher priority informing the amateur operator of technical interference and in some cases exercising authority to order the amateur operator to stop communicating.

14. At the present stage in the development of communications, those early-year requirements no longer are valid and Manual Morse Code is considered an obsolete method of communication. Amateur operators are no longer advised of problems "on the air" by governmental and commercial operators, and indeed the amateur radio service is the only such service still using Manual Morse Code for communications.

15. The United States is a signatory on the International Radio Regulations ("IRR") of the International Telecommunications Union ("ITU") which still specifies that each Administration require proof of proficiency in receiving by ear and sending by hand of Manual Morse Code for amateur operators using portions of the spectrum below 30 MHz. The IRR does not specify any particular speed for such certification, and indeed, one major Administration (Japan) has been issuing amateur radio licenses in derogation of this regulation (by the "exception" process).

16. It is expected that a proposal will be made to eliminate this requirement at an ITU World Radiocommunications Conference to be held within the next few years. This commenter urges the Commission to take a leadership position among the ITU member Administrations to eliminate this requirement as no longer necessary.

17. Additionally, this commenter urges the Commission to eliminate
all such code testing requirements at the earliest opportunity, by the
"exception" method if feasible, and if not feasible, in the interim to
require testing in Manual Morse Code to be at a speed of no greater than
five (5) words per minute.

<end quote>

The FCC must have agreed, they changed all code test to 5 wpm.

>
> Just not for the reasons that you are proffering.

If your reason is because it is "unnecessary",
I agree, it is unnecessary [arbitrary, not in conformity with
5 USC 706(2)(A)].

Ok, we agree on the decision, now who gets writes the majority opinion?

I do like that "exception" thing. Dam, did I take a lot of flake
for proposing that to the NCI board.

Hans,

I said "... held by so many hams ..." Clearly, there are folks who are
not Morse enthusiasts who also hold to the "do it the hard way, rather
than the smart way" idea ... and not all Morse enthusiasts hold to that
idea.

I certainly did NOT intend to imply that all, or even most, folks who
like Morse are stagnant and backward ... many Morse enthusiasts
do lots of other things and are progress-minded (quite a few are
NCI members who have sent me e-mail saying "I like Morse a LOT,
in fact it's my primary operating mode, but the test just doesn't make
sense any more.")

Ok, show me the calculation that predicts the duration of the power outage
so I can calculate how many car batteries to keep charged up and on hand.
The principal is the same no matter what power source you choose to specify.
No one can predict when, where or how long emergency power will be needed.

Strange that there are many things people do which are
long past relative to modern needs (archery, old cars,
etc.) without any testing needed to continue interest
in and to bring newcomers to the interest. IF morse
dies without testing then that's a sad commentary on
"how great it is" as promoted by PCTAs in this newsgroup.

Well, if you're going to use what appears to be an honest question to lash
out at whomever it is you are targeting, please forgive the confusion on my
part. I didn't realize you were being rhetorical to the NCTAs.

By the way, isn't stating that NCTAs "have been claiming forever that
eliminating the code tests for HF access. . ." rolling us all into one

"neat" little package? I don't think people who'd like to see an end to CW testing all think alike at all. Have you ever seen me accuse you of being like Larry or Dick? They are two PCTAs and you are a PCTA also.

We all have our own opinions about why we think something is a good idea.

The ONLY aspect that the ham can claim is that s/he is better
qualified at CW. The other, non-CW hams may be far superior
hams than the coded ham in all the other aspects of ham radio
operation and technical.

Oh, duh....gads, Dee, it's late! I'm sorry...

I just plain believe in the philosophy of trying to be as prepared as I can--and I don't even get that far very often. Being prepared takes some measure of organization and I lack on that part.

And it seems to me that non-CW hams would be far superior to CW-hams, with
things such as phone nets, QSOs, etc.

Oh wait, I think you already said that. . .

But, you know what? It doesn't even feel good feeling superior.

If so, they were hams working as engineers, not engineers working as hams. Being up here in The Silicon Forest, I have come to know a whole pile of ham-engineers at Intel and Tektronix. I daresay that very few of them have so intertwined their professional engineering and amateur radio activities to the point where one cannot distinguish one from the other. Most of the ham EEs of my acquaintance prefer to keep a very distinctive line between the two, many under pressure of their employer.

Those who have successfully blended their specialties are folks like Dr. Dave Leeson, W6NL/HC8L, a real DX hound who is the founder and CEO of California Microwave and Professor of Electrical Engineering at Stanford University, and who serves as an Expert Witness when we go to the California legislature or into litigation over amateur radio issues - that is if he's not off on some DXpedition or world radio contest or other.

Another example is Phil Karn, KA9Q, who, besides our being taken for each other because of the similarity of our names, is a whiz-bang guru of data transmission systems with Qualcomm and has developed a whole bunch of software for digital data transmission specifically designed for the amateur radio service.

Finally, myself and several others across the country are a "three way mixture" of lawyer, engineer, and active ham, all so intertwined to make our professional lives an E-ticket ride.

In all the above situations, there is input -directly- into amateur applications per se, not development of some system or device which has such general application that it -could- have application in the amateur service "somehow".

A fine - but finite - difference.

But fortunately some who are left in the field offices are damn
good, like the two former field engineers who worked for me in the
San Francisco office.

A good and close friend and colleague, Jim Dailey, was just
appointed Director of the FCC's Office of Homeland Security which
was placed within the FCC's Enforcement Bureau with the mandate to
carry out the homeland security and emergency communication
functions of the Commission and its licensees. That office will
also be responsib;le for the "monitoring and interdiction functions"
as we liked to call it....

Jim is an engineer through and through. I'm glad he got the job
rather than someone else w/o engineering skills.

On 14 Jul 2003 17:31:44 GMT, Alun Palmer wrote:

>And learning history in an EE degree somehow helped you to do that???

It taught me to think. It taught me that we live in a culture, not on a circuit board. It taught me not appear as an ignoramus before non-technical folk.

At a very intensive (i.e. tough to get into and tough to stay in) engineering school, not only did we have to take two semesters of "American and World Civilization" in freshman year, which disguised a course in Cultural Anthropology which we all hated, and two semesters of "American and World Literature" in junior year, a required "Humanities" sequence which we all regarded as a waste of our valuable nerd time and geek energy (and to add insult to injury taught by the same professor as the freshman year course), we also had to take a course in General Economics, which I wished I had paid more attention to because until this day the subject still remains mumbo-jumbo to me. At least Atomic Physics (taught by one of the Manhattan Project physicists) which also seemed like mumbo-jumbo finally made sense when sometime after I took the course I finally figured it out with the help of my brother who is also a ham and has a Masters degree in Physics but hasn't worked in that field for 35 years.

To further broaden my background, while I was in engineering graduate school at one university, I was attending another university studying Jewish history, philosophy, liturgy, Hebrew language, and culture, subjects I had "kissed off" in my younger years. Was I forced to? Not by the school involved (it wasn't a degree program), but by the need to be a well-educated person in my community.

I can almost say the same for my law school (doctorate level) education. Some of the courses seemed like a waste of time....but in practice I find that the background that I got from the "unnecessary" specialty courses was really necessary for the proper practice of my legal specialty.

Substitute "the humanities" for the string of courses I cited above, and they are still necesary for one to be a well-rounded and well-educated person. One can't "figure out" humanities - either one learns it or one doesn't.

Well, how about a car battery installed in a car, which, with several
gallons of gas in the tank,
running to keep the battery charged. One could accept donations of more
gas siponed from
other volunteer cars if necessary..... The car could act as the shack
if the weather's lousy.

Because there is the difference between a cheerful anachronism, and what will eventually be considered a waste of bandwidth.

I can keep an old car in my garage without affecting anyone.but bandwidth is another matter. But let us look at this scenario. Say 15 years from now, there will be s aizable number of hams who have never used a paddle or key. There will be new hams taking up CW, but without an incentive, like a Morse code test, that number will likely fall somehat percentage wise (it has to if the No-coders are correct in that good hams are kept off the air by the code test)

So these hams look at the bandplans: "Wow! just look at 80 meters. Fully half the bandplan is dedicated to stuff other than SSB! It's unfair that they should have all that bandwidth." And a bandwidth grab begins..... Doesn't matter that there are still CW users out there. "And heck, they are always bragging about how little bandwidth they use, so only give them a minimum abount if anything."

Ahh, now your starting to qualify yourself and are no longer pure!

Why should someone have to learn ANYTHING they don't want to. If a
person wants to remain illiterate, then so be it. Why should children be
forced to go to school if they don't want to. Why should I have to take
any training whatsoever, just call myself an engineer.

As I understamd it, hams may modify for their own use radio equipment
and use it
on any ham band their license is good for. Even modify a CB radio to
work in
the ten meter band. Or modify a linear to operate in ten meters. But
no more
than 5 copies of any particular model in a year. That modified CB could
operate
outside of a ham band, but it's up to us to not do that. Supposidly we know
enough (having passed written exams when applying for a ham license) to know
what frequency and mode we are on and using, and where such are permitted
for hams to use. Thus the FCC lets us use non type accepted (or
whatever they
call it nowadays) or modified radios. CBers, fire and police depts,
marine users,
cell phones, FRS and such users didn't take any exams on radio before being
allowed to use these type accepted radios.

Also heard that the big manufacturers who make more than 5 copies of the
same
model need type acceptance from the FCC.

That limit -- and the type acceptance requirement -- only applies to power amplifiers operating below 144 MHz, as per 97.315. Note that the limit for homebrewing (or modification) is *one* unit per year of a given model, not five. The other requirement for FCC approval for amateur gear is in the receiver section, which must meet the same Part 15 requirements as any receiver for a given band or bands.

Hmmm.... but if there ever was any career paths that the possibility of needing to communicate in a non-voice manner those professions just may be..... If a firefighter gets trapped in a building or cop has some type of situation where he may not be able to speak or something, he may be able to tap code out on the speaker.

Far faster. T1 rates. No problem at 1.544 MBPS.

Too bad you guys haven't seen the Star Trek schematics at Paramount. Data wasn't yet born in 1966 when TOS got going. TNG came much later. Tsk, tsk.

Geez, a lot of "angels on the head of a pin" arguing in here about a fictional future world as envisioned by some imaginative show biz folk of two to four decades past.

There's a parallel, though. Two to four decades past a lot of morsemen were fictionally manufacturing futures in their heads, unable to imagine any future that didn't include them as the titled, the all-knowing gurus of radio, everyone doing as they did. Myth knows myth. Two of a kind.

"CW gets through when everything else does" - B.B.

Let's see a list of YOUR technical accomplishments in radio, Kellie.

Your SINGLE patent is a mechanical one, not even related to radio.

What innovation or push of the SOTA envelope has 1999 graduate
Larrah Roll done? He IS an Extra "heavy" (20 WPM code test).
How about colonel Klunk 8 Minnesota? Stealth engineer N2EY?
The Whiskey zero EX? All long-timers.

They've had LOTS of time to innovate and do envelope pushing.

Shrug.

Alun, California state undergraduate requirements in the 1960s had
two semesters of American History. Considering our history, like from
the 1776 breakaway, that isn't comparable to what you had to do in
the UK. :-) :-) :-)

I don't know why there is such a fervor of the PCTAs to equate an
academic degree with an amateur radio license class that requires
a demonstrated skill at morsemanship. Maybe the PCTA have a need
to stay with the King Kode rulers of the ARS kingdom? :-)

John, you are mixing pomegranate and pistachio metaphors here.

From what I've heard from NASA folks, the "ham in space" thing and
the astronauts' "ham licenses" were all just a big PUBLIC RELATIONS
gig to make NASA look nice-nice.

Get real. Any astronaut is required to perform many, many tasks as
part of their job...and that job is to be space crewfolk first, not "hams."
Getting a no-code tech ham license is an easy task for them...do it
once and a federal merit badge callsign is theirs to keep for a decade
plus two or a shuttle burns up on reentry...whichever comes first.

The "ham communications from space" are no more complicated than
astronauts doing live news media interviews while up there. "State of
any art" it is NOT. Just plain PR.

Tsk, tsk, tsk, the Djork just won't give up... :-)

A half century ago I was ON HF...without using or having to know how to
use morse code. No problem.

In 1956 I got a First Phone on the first try...NO morse code skill needed
for that. I worked MF, then VHF, then UHF, some HF, some LF, some
VLF, several microwave bands. I've "worked" a radio station ON the
moon. No problem. No morsemanship needed or required.

Three months ago I was on HF again, SSB from a private sailboat in
a Ventura marina. Didn't even have to show evidence of my General
Radiotelephone license (what the First Phone had become).

Throughout Title 47 CFR the word "service" is a regulatory term denoting
the type and kind of radio activity being regulated.

If you keep trying to say that the ARS is a "service" like some kind of military or a "service" as in a service to your nation or community, you are FOR SURE stuck in a brainwashed, self-righteous, and fictitious notion of being better than others because of that callsign grant.

When YOU are a PART of the FCC, then you can start sounding off like the radio judge you want to be.

Problem is, when you are a part of the FCC your real name will become public and you won't like that, will you Djork?

Stuff it, sausage.

I've "met" more challenges than you have, citizen of Djorkland. I have the evidence...and a comfortable retired life with a career that still manages to continue.

Considering I was actively operating and maintaining HF 24/7 communications a half century ago WITHOUT ever having to use ANY morse codings then or since doesn't make you sound anything more than a Djork.

Title 47 CFR Part 97 is NOT entiteled "Archaic Radiotelegraphy Service" and it is NOT a federal requirement to love, honor, and obey morsemanship.

>And you are correct "Code aptitude and IQ are completely unrelated" So much >for the "Engineer copout"

There IS some hope, Djork. At least one of your synapses closed. :-)

>It has nothing to do whether you or I like or dislike the code.

It has to do with the TEST being there, stupid Djork.

>It has nothing to do with "Antiquated technology"

Bulllshit! It has EVERYTHING to do with a skill that was first used in 1844...and the ONLY skill that could have been used to make radio any sort of communications means in 1896.

>It has nothing to do with "I'll never use code"

WRONG!

>It has everything to do with "Want HF Ham Ticket -- Pass the Test "(at the >moment) If dropped is all OK with me. Times and requirements change as they >should.

They DON'T "change as they should." That code test should have been tossed long ago, longer than 13 years ago.

>Black and white -- yep sure is -- society, government, et al make it that >way.

Color television was made broadcasting law back in the early 1950s.

You've FAILED your Ishihara color vision tests, haven't you?

>Don't Drink and Drive, 3 strikes you are outta here -- Pass the Test --
>pretty black and white to me.

OK, you've struck out. Now getoutahere! Bye...

So you recommend that all firefighters and policemen be required
to learn code for that one in 10 million incidences where this
might happen?

>Nonsense and a big copout

Bullshit anonymous one. You can't be more wrong.

>If you want a BS/MS/PHD Degree -- pass the tests

I passed the BS tests. But, academic degrees are NOT set by any
federal laws, cannot be changed outside of the academic community.

>Want a driver license -- take a test

I took my first one in 1950 in Illinois. But, state laws are debateable AND
changeable by law.

>Want a job - take a drug test and physical exam and perhaps a professional
>test

Plenty of jobs out there, not all of them require "drug tests." The
physical
examination for insurance purposes, NOT for all jobs.

>Want insurance -- take a physical exam

Not always needed. I've never had to get a physical exam for car
insurance...nor house insurance. :-)

>Want to be an apprentice (JourneyPerson) -- take the test

Long before I got my degree I was a working electronics design
engineer. No "unions" in electronics engineering. :-)

>Want to advance in the Military -- take the test

In my 4 years of active duty in the US Army, I went from E-1 to E-5 in
two and a half years WITHOUT ANY FORMAL TESTS.

>Pass the Bar (Legal that is) Pass Da Test

I've passed many bars. A few I even walked into and got served.

>Nurses CPR for sure and maybe ACLS Tests

Steamy, are you trolling again? Mess up your Anger Management
class again?

>Sobriety Test -- Try to dodge this one

I've never been in Dodge. I once rode in a Dodge. I'm sober as a judge
and right now I judge you to be some kind of trolling putzim.

>Want an HF Ham license -- take the code and Technical/Rules et al test
>Otherwise we have CB and FRS. And one who listens on these bands ought to be
>totally inspired to get a Ham Ticket !!!

Tsk, tsk, tsk, I was legally ON HF the first time in 1953 and didn't have to
get my first FCC radio license until 1956.

>Simple as that.

You ARE "simple," simple one.

>Anyone who used the code as an excuse for not becoming a ham, just wasn't
>serious about it.

Awwww...got your feelings hurt by NCTAs? :-) :-)

>If 10 to 17 year olds can do it, why can't an engineer or any other college
>grad ???

One can brainwash pre-18 teeners a LOT easier than older folks. :-)

>Did any of those "Engineers" get a No-Code Tech license ??
>Didn't think so !!

I'm only on a "good friends" basis with three US radio amateurs. All of
them became licensed well before the "no-code" OR technician licenses
came into being.

Were you born in Newington or were you brainwashed as a child?

>make sure it's the beacon you want.

As JJ mentioned, the morse code tone ID is printed in the block
for each VOR and VORTAC on sectionals and en-route charts.
Since before 1962 they've been printed as little bold-face dots
and dashes.

Probably the main reason those tone IDs are still there is that
THE FAA NEVER TOOK IT OUT OF REQUIREMENTS. The ID
keying is a terribly simple mechanism (so many still survive as
mechanical form) that it was simply kept. Much easier to keep it
than require each and every VOR and VORTAC to remove it.

The tone ID pattern, along with the tone itself, can be generated with
a single Microchip PIC or equivalent plus a handfull of passive
components...will last for years. :-)

>I doubt that any of the radio comms the special forces use are
>capable of Morse code.

The AN/PSC-3 and PSC-5 don't have it. There are still AN/PRC-104s
in the inventory (104 is HF, backpack, 20 W max RF) and that does have
OOK CW capability...it is harder to find a manual code key in the Army
inventory. :-) Search Tobyhanna to find out if they got them. :-)

Sudden mental picture of SF ops lugging around an AN/FRC-93...........
BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!

[it IS funny if you know what a "Frack 93" is... :-)]

Old reliable AN/PRC-119 is 30-88 MHz, FHSS (10 hops per second),
can send/receive encrypted voice or data, data at 16 KBPS rate, has
built-in RF power reduction (manual). A quarter million of the ICOM and
non-ICOM sets (VRC-90, et al is vehicular, ARC-210 is airborne, etc)
have been built and fielded by now. Standard small-unit radio in the
entire US military for tactical use. Several antennas available, can talk
to satellites or to aircraft (like Joint Stars) loitering 30 miles away
slant
range. That family started going operational in the US Army first in
1990 in Korean-based units.

Actually, MOST of the US Army field radios have a sort-of OOK CW
thing built in. But, that's NOT for morse keying operation, it is for the

capability of remoting the control point from the radio itself. Also, the Army field radios are, as they have been since Korean days and the AN/PRC-9 thru -12, capable of operating as repeaters, usually two-way.

Both Army SF and Navy SEALS will use AN/PSN-11s to find their absolute positions at an objective. That PLGR will also connect to a PRC-119 to set its internal clock much better than the 4 seconds tolerance needed for FHSS netting. The PSN-11 is a GPS handheld.

All of the above is public-release information. The "sending CW from behind enemy lines" scenario is a nice myth/tale/rune-scratching from the followers of the Church of St. Hiram whose beeping has damaged their 4 neurons. :-)

>a SF op actually read the manual on constructing
>railways?

A look at the GPO index (or search) doesn't yield any "manuals on operating pack trains." :-)

Many Army TMs and FMs are now and have been distributed via CD-ROM.

A special forces Communications Sergeant is required to demonstrate morse code ability to earn that MOS (Army).

There are two MOSs taught at Fort Huachuca Military Intelligence School (branch classes elsewhere added, including inter-service locations under the Huachuca MI command.

>I don't think that all SF op's get CW training.
>They are generally cross-trained in many things,
>but I don't think every Green Beret gets CW.

"Green Berets" (rest of Army is Black Beret) and Special Forces (except for one MOS) don't bother with morse skills.

>Your generalization about SF is bunk as now
>the Marines are considered 1st cousins to the
>Berets. :) Do they have to learn CW?
>
>I had thought pilots DID. Does Anyone know?

US private pilots don't require morse code skills to get their private pilot licenses. FAA doesn't require it.

>When was the last time that you used PSK31?

I've never done so. Last time I sent any "data" (teleprinter)
was in 1989, at 100 WPM, 170 Hz "spread." First time I did
it was in 1953, at 60 WPM, 850 Hz spread.

>How come everyone always says that all the other
>radios will fail and the spark radio will still
>be working?

Brainwashing works! :-)

>What happened to SF op's carrying
>sat rigs in addition to HF rigs? Which one
>do you think they use the most? I think that they
>use their third rig for lo/hi VHF and UHF communications
>on AM with the birds flying overhead.

Back in 1991 (first Gulf War) they used the AN/PSC-1 which had 3
antennas, the biggest being the folding semi-parabolic useable with
comm sats. Sent data at 1200 BPS, had a little keyboard and
single-line of text display. Now (second Gulf War) they have the
AN/PSC-3 and AN/PSC-5 ("Spitfire", just coming into operational
service) which have 16 KBPS data (compatible with SINCGARS
family) and Internal Communications Security.

>So you let
>me know if pilots still know CW and receive their

We may have an initial inrush of some newbies in the onset, but it will
flatten back out to where it is about right now is my prediction. Its from
a "marketing" standpoint. The hobby just is not promoted like it should or
could be. Once us existing licensee's hit up our friends and family, that
is usually it. (kinda sounds a bit like Amway!)

Absolutely, idiots who do something like this obviously lack the ability to think of the consequences of such stupidly. Some years ago I was involved with an SOS on 15 meters. The station sending the distress call claimed to be in a boat with several people on board and was sinking. The signal was weak and the station was sending pretty crappy hard to copy CW and repeated request for his location resulted in uncopyable CW. Stations, using their beam antennas, determined it was coming from somewhere in the northwest. The Coast Guard got into the act and came up on the frequency and before it was all over there was a Canadian Coast Guard cutter and a U.S. Coast Guard aircraft on the way to search off the Washington/Oregon coast. They searched all night and the next day I received a phone call from the Coast Guard that they decided it must be a hoax.
Too bad it could not have been determined who the idiot was, he should still be in prison.

The USCG or the FAA/CAP, depending on who goes out to "rescue" same,
now sends a bill for the cost of the operation. The FCC does levy a
maximum-limit forfeiture for false distress.

But the bottom line is that it's up to the Justice Department to
collect, and they are always overloaded, or so they say.

>>
>> What say, ye lawyerly types?

I don't knpow all the facts in the story, but one possible scenario
could be that this is part of a first offense "plea bargain" to
avoid seizure or surrender of the equipment involved in a violation
situation, and as such does not create a binding precedent in
and of itself.

One possible scenario is that no action for a violation such as
out-of-band operation will be brought against him, or any action will
be suspended, if the restores the equipment to factory configuration.

Another scenario is that this transceiver includes an FCC type
certified receiver, and even though there may not be any out-of-band
operation, the use of a non-certified receiver when one is required
to be certified is a separate violation. There is a procedure for
one-of-a-kind amateur equipment self-certification, but if it is
a commercial piece of gear that is required to be certified, it must
be a mod approved ny the manufacturer.

As I said, I don't know the whole story nor at which office it
happened.

Also note that I used the term "type certified". "Type acceptance"
is no longer an FCC procedure - I think that I posted a tutorial on
this a short while ago (perhaps in another group).

Riley may not have been involved in this one. The use of the
phrase "this office" would indicate that this is a District Office
action. I wonder which one?

>i would say he got off easy, the fcc could have just confiscated the
>equipement,

Radio equipment is not contraband under the Federal law meaning of
that term, nor does the FCC have authority to confiscate anything.

The FCC can apply to the U S Justice Department which requests the
Federal District Court to issue a Seizure Order, executed by the U S
Marshal Service, to seize radio equipment found in violation of very
specific rules and statutes. In that case, the Justice Department
has to go back to the District Court after the seizure and petition
for forfeiture of the equipment to the government. This is not
automatic - a hearing is held at which the subject can present evidence
of why the equipment should not be forfeited. When the court orders the
equipment forfeited, it is usually turned over to the FCC for
destruction as described below.

The other way that radio equipment used in violation can come into
the possession of the government is if the subject is willing to
voluntarily surrender the equipment for destruction (it may not be
sold or used by the government) in exchange for consideration as to
the outcome of the violation. In that case, the owner signs a
release transferring it to the government, and the equipment is
kept in a secured facility and bar-coded and inventory-tracked in a
special account audited by the FCC's Inspector General until it is
actually destroyed.

>canceled his license,

Revocation of a station license and suspension for the remainder of
the term for an operator license are complicated and drawn-out
procedures, involving notice and hearing with a potential lengthy
appeal process.

>and fined him

The FCC does not levy fines - only a court can do that in a
criminal trial.

The FCC can levy a Monetary Forfeiture, an administrative penalty
which has the appearance of a fine to a lay-person, but the
procedure is entirely different. Again there is a requirement for
notice and an opportunity to be heard, then a series of appeals, and
in the long run if the subject does not pay, the U S Justice
Department has to institute suit in Federal District Court for

collection, at which time the subject is entitled to a _trial de novo_ - IOW the circus starts all over again.

>and been done with it.

Im;s sure that you will agree that with the complexity of procedures outlined above, it's not "being done with it" by any means.

>radio) and "foot warmers" (those that have been modified to be able to work
>outside the ham bands...like, one that was originally for 10M that now works
>well in the CB range, etc.).

I wish that that was so, but it is not. It is a violation to use
such equipment, and use is presumed as a matter of law when there is
possession coupled with extrinsic evidence of contemporary violation
of the type that would result from use of the device, but mere
possession is not a violation (barring other factors).

Oh, my, the "Pool!" :-)

I think you are confusing a POLITICAL nice-nice phrase (in 97.1) with reality.

1. There's NO OTHER RADIO SERVICE that needs anyone with CW skills from this "pool." Not in the USA, at least.

2. The US military "graduates" roughly 20K personnel annually, all of which having been actively involved in the military service doing radio communications. That's over a million in that particular "pool" who can directly apply their service skills from the last 50 years.

3. It is very difficult to justify a HOBBY activity involving radio as a lawful
whatever among all the other professional radio services, therefore a lot of political phraseology has to be slapped on to "justify" the fun, the recreation.

>So since I want ham radio to continue to be allowed, I consider it mission >critical to be familiar with the various modes whether or not I like them.

"Mission critical?!?!?"

I think you fell off your launch pad. Amateur radio is NOT some kind of NASA...it is NOT vital to the defense of the free world...it won't cure cancer or stop war or explore outer space.

OK, the countdown has started on the death of code testing. You can try for all the countdown holds you want, but the mission clock is still ticking, ticking, ticking...it isn't going "dit, dit, dit."

Perhaps, but it wouldn't be all that likely that anyone hearing it
would recognize it as an attempt to communicate, let alone copy the
message...chances are the fire dispatcher isn't required to learn
Morse in order to qualify for the job.

Fortunately, there are other ways to accomplish the same task, that
being to alert other firefihters to the plight of the trapped
personnel. The fire department in Buffalo, NY equips members of its
interior teams with portable radios that have a "man down" button on
them. When said button is pressed (which isn't hard to do, it happens
very often by accident) it activates an alarm on the MDTs in the rigs.
The drill then is that all other comms stop at once and a headcount is
performed. It doesn't even have to be the MDT on the rig he or she is
assigned to - any MDT in range will initiate the alarm. Other
departments probably use that technology as well, I merely am aware of
this one since I live relatively near Buffalo.

That remains to be seen. The next generation of hams hasn't joined our
ranks yet. However, if you're truly concerned about getting said hams
to try CW so as to preserve its status as a viable means of
communication in the ARS, you might consider wording your message in a
less offensive manner. That way you might actually reach someone with
your message. As it is, you virtually guarantee a negative reaction to
your words. You'll never convince anybody that way.

My intention was to point out that Hitler was wrong, even though he
was thoroughly convinced he was correct. No other comparison was
intended. In retrospect, however, given the negative connotation folks
generally attach to the mention of Hitler (entirely deserved given his
contributions to human history), perhaps the choice of analogy was a
poor one. Lemme try again: At one point in history, humanity's most
learned scholars had it proven to their satisfaction that the Earth
was the center of the universe. That is, until Copernicus came along.

>club, of the several I've been to, are not interested in those areas.

I can't account for the lack of interest in these activities from the clubs in your area, but the club I'm active with has quite a bit of interest there, especially in VHF and direction finding. In fact, we run a transmitter hunt on a weekly basis during the summer. We don't do it in the winter because we don't want to be the reason for people driving around in snowstorms and getting killed while trying to have fun and learn a useful skill. This is Buffalo, after all..... :-)

>Its not a lack of resources. Its that Hams don't want to. My local club even
>has a Network Analyzer and a dedicated shack with radio setps, parts, cables,
>soldering iron, etc. They have the resources to do the technical activities.
>They just chose not to do that and to do contesting, antenna setups, and CW.

Most clubs seem to have a core of people who assume a leadership role in club activities. Most planning and execution of club activities gets done by that group of people. If said group does not perceive an interest in an activity from the rest of the membership, often they won't waste their time doing it...meaning that until enough people express an interest in something, it doesn't happen.

The solution would be to seek out others in the club who have the same or similar interests, creating a sort of special interest group within the club, and then suggest the idea to the club leaders with the numbers to show that there is interest in a topic. Demonstrating that the membership wants something done is the best way to get it to happen. The squeaky wheels get the grease. :-)

>And its not that I can't be bothered. I would actively contribute in those
>areas, if other Hams joined me.

On the other hand, sometimes all it takes is for one person to do something, and then others jump in and start to follow suit. This is called leading by example, and it works, unless you happen to be doing something that's obviously a bad idea. Your ideas seem good. Consider starting the ball rolling yourself and see who jumps on the bandwagon.

>Perhaps a change in attitude would benefit the ARS. Hams should have more than
>just a limited view of contesting, antennas, and CW. If Hams wanted to become
>good in many different areas, the ARS would benefit.

There are hams who detest contests and contesting. In fact, the same could be said for CW. Yet, there are also plentry who are very interested in those topics. As for antennas, every ham who wants to actually get on the air needs at least one, so it should really come as no surprise that it's an easy topic to get people interested in. At our club, the seminar on building J-pole antennas was the most popular meeting program of the just-completed club year. We actually built a copper pipe J-pole during the program, and one out of 450-ohm twinlead. Even guys who had been club members longer than I've been a ham were fascinated.

The bottom line is to keep in mind that one of the greatest strengths of any club lies in the diversity of its members' individual interests. There are probably others in the clubs in your area who share your interests. The trick is to identify them, and then get something started. Once you get the ball rolling it usually keeps rolling for quite a while.

Actually, Scotty was sending the Morse "stand back" while Kirk, Spock,
and McCoy "decoded" it from inside the brig. Then the wall blew in and
Scotty was standing there saying in his trademark brogue, "Well? What
are you all just standing around for? Do you not know a jailbreak when
you see one?"

I think it's worth mentioning here that the solar flares that cause
the geomagnetic storms that degrade HF propagation also trigger a
significant increase in auroral activity in the higher latitudes. This
provides an opportunity for ops on six meters. I've observed the
phenomenon before. Your're in New York. You point your beam north and
you start hearing somebody in Florida. You figure you're hearing him
off the back of the beam and turn it south to bring up the signal,
only to have it disappear.

Much of this activity happens on CW. Voice signals get distorted a lot
due to the effects of all the ionization in the aurora itself.

Oops...that's gonna getcha flamed.

An astronaut/ham's license is renewable for the life of the
astronaut/ham. So is any other ham's license. Once a ham becomes a
silent key, responsibility for licensing him or her passes to a higher
authority (who is a ham and has just bestowed the ultimate license
upgrade to the newly deceased - the privileges are unparallelled, but
the licensing requirements are rather steep - although no
demonstration of Morse proficiency is required, the written test is
reputed to be a real killer). However, the reference to shuttles
burning up on reentry was a poor choice of words.

> to have a decent QSO.

Thank you for inviting me into this one.

I think it was last Thursday (Wednesday?)afternoon, no contests
anywhere and I'm lounging out under the monster maple tree which
supports my 20M Field Day dipole schlepping around the band with my
recently acquired el cheapo portable 100w wunderbox. It dawned on me
that I hadn't done any ssb with the thing up to that point and that I
should stir up an ssb contact or two for modulation checks, TX audio
gain vs. splatter, the usual. The phone band was a garbage pit, noise,
qrn, nobody home, flare = ON in a big way. SSB DX with 100w and a
dipole? Bwaaahaha! Not on yer life.

Finally I ran into a group of old fart 1x2s from the midwest with
decent signals on 14.188 yakking with a local, broke in and got my the
audio critques.

Having done that I spun the knob counterclockwise back down the band
and within ten minutes I'd beeped my way into logging an Estonian, a
deep Russian and a South African. The 9J2 got away from me becuse he'd
lit up the spots nets before I got there but I ain't done chasing him.

That's the way it is. That's the way it's always been. God bless all
you Morse crippled out there in radioland, less QRM for me.

> >
>

> 73 de Jim, N2EY

Yo Jim - The local was Alan Gray w3bv who spun the k3jh pole around on Royersford when I checked in. We yakked for the best part of an hour, he's been here, we shared a lotta giggles abt the lurks we still deal with.

I'm tempted to compose a post comparing Latin to Morse and chastise you for not knowing it, concluding of course with the statement that since you don't know Latin you are not a "real" man and are less qualified than someone who knows Latin. I'm not going to do so, because I've never used Latin since graduating high school and have forgotten most of it, so I'm in no better shape with Len's statement in latin than you are.

Besides which, Latin is a dead language, while Morse at this point hasn't reached that stage...although it does seem to be running a slight fever lately.

Perhaps, but it wouldn't be all that likely that anyone hearing it
would recognize it as an attempt to communicate, let alone copy the
message...chances are the fire dispatcher isn't required to learn
Morse in order to qualify for the job.

Fortunately, there are other ways to accomplish the same task, that
being to alert other firefihters to the plight of the trapped
personnel. The fire department in Buffalo, NY equips members of its
interior teams with portable radios that have a "man down" button on
them. When said button is pressed (which isn't hard to do, it happens
very often by accident) it activates an alarm on the MDTs in the rigs.
The drill then is that all other comms stop at once and a headcount is
performed. It doesn't even have to be the MDT on the rig he or she is
assigned to - any MDT in range will initiate the alarm. Other
departments probably use that technology as well, I merely am aware of
this one since I live relatively near Buffalo.

No argument from me, ham radio has historically and obviously been an
EE hatchery going back to Marconi's days, 'snot even a discussion. But
I ask "Who have accrued the benefits of this phenomenon?" My
contention in this respect is that it's been by an overwhelming
majority the kids themselves who got into ham radio then became EEs as
a result who have benefitted most ($$$). A classic example of the
Amateur Service doing exactly what it's supposed to do to justify it's
existence. For once.

In my own case, having been a radio nerd back when radio was the about
the only high-tech game in town I had to decide between EE and ME
since in that timeframe I was also a gear and motorhead in addition to
being a beepist. I quite consiously opted *against* EE because I
didn't want to put myself into a situation where my job followed me
home into my hobby thus it was that I became an ME. Absolute fact and
it wasn't any more complicated than that. But my hobby has quite often
held me in good stead on le yob because I've quite often found myself
doing EE work on ME projects. I've nailed several gigs over the years
by virtue of being considered "multidiscipinary" by employers, thankew
ham radio for the contributons to my career.

Whatever . . .

Has *nothing* to do with engineers who did not come up this way and
are already engineers when they belatedly "discover" ham radio. And

will allegedly come up with "advances in the state of the art" once they enter the hobby without having to suffer any code tests. Like you claim will happen.

It's all bullshit. The last time any ham engineer or not actually advanced the state of the art in RF comms to any noticeble extent beyond that which the commercials and/or the gummint hadn't already done was probably done in the 1915 timeframe. If not spank me with an example.

Drive a stake in it and move on.

You also need to know when and how to cuss properly when the hammer is not applied properly. Different situations mandate a difference response - a polite "ouch" when you don't want someone to hear such language to throwing the hammer into the next neighborhood as you employ a string of cuss words rash enough to make a sailor blush when it really hurts.

You can always tell when a neighborhood has a lot of people who like to build or work on things - it is amazing how many tools (of all types) can be seen flying around. Because of this, area officials should clearly re-zone some neighborhoods as "hard hat" areas.

Leonard H Anderson, you are truly one of the most callous,
cowardly and unrepetantly ugly people to ever enter USENET or any
other public forum.

HOW DISGUSTING can one human being be...?!?!

What a piece of work. Truly deserving of every ugly epithet I
can think to "laud" you with and more. There hasn't been a prfanity
created to adequately "describe" just how cold and disgusting that
comment was.

"Scumbag" is an understatment. "Putz" only scratches the top.

You try to embellish your own "reputation" on the graves of
American KIA's, then you completely disgrace and humilate the graves
of seven men and women who, regardless of nationality, died what can
only be assumed to have been a horrific death in the pursuit of
science

What an utterly foul, irrelevent and truly puny shadow of a human
being you are. When YOUR death comes, I can only hope that, unlike
those seven brave souls, that it is long, lingering and painful, and
that you remain sufficiently aware of your circumstances to appreciate
it all.

Creep.

Obviously not a lawyer, but my read on this was that the FCC is
giving him a chance to keep his radios, avoid the nasty fine that
COULD have gone along with this, and sends a very loud signal to
anyone else so inclined to not abuse the privilege.

Should the USCG elect to seek restitution for whatever SAR forces
they may have sortied upon receipt of his "distress" call, can you
imagine the cost? Just the cost of an hour's worth of fuel, crew
salaries, etc?

I think he got off very lightly, the embarrassment alone probably
(hopefully) enough to disuade others from doing it. Of course there
are always those "Burton's" among us...

Larry on a mountainside rescuing a hiker and his wife. The hiker has
fallen and broken his leg, compound fracture. His wife is screaming.
As night falls, Larry pulls out his 2m HT and, because this is a
life-threatening emergency, calls "CQ CQ CQ de K3LT."

Ops normal.

Those who for whatever reason, develop an interest in CW will
learn and use it. For many, CW will not be of any interest and
nothing wrong with that. You may think CW is "fun" but I am sure
there are things that other people consider "fun" that you would
not. Not everyone has the same tastes, just because you think
something is great does not make it so for everyone else.

Tuning up on a frequency you are not license for and yaking, or
causing some interference is one thing, but sending a false
distress signal is another. Such action causes agencies to go into
emergency mode, all kinds of taxpayers money is spent, and even
other lives may be put at some risk for such stupidity. They
should have thrown the book at him.

You've said enough. You made a complete fool of yourself, and
even after provided several "outs", you continue to try and "defend"
the foolishness that you yourself promulgated.

You're pegged, Brain...right along with your "buddy"
Lennie...(the same creep who defiles American combat KIA's and NASA
Astronauts...some "company" you keep)

Why not take this one bit of advice...??? Just stop answering
any posts vis-a-vis your alleged "T5" operation. Let it go away. Not
one independent thread of evidence "supporting" your allegations has
manifested, and your incessant attempts to prop them up makes you look
all-the-more idiotic in the process. What ever aire of validity you
may have once enjoyed is long gone. You're already dug-in deep and
the hole can only get deeper.

My concern is NOT with the severity of his penalty (I think it was pathetically lenient) but with the chilling effect it could have on tinkering and experimenting by amateurs who apparently must now fear that FCC can require them to put their equipment back into factory-fresh configuration.

I don't have a single peice of equipment which I have not "improved" from it's original schematic. Frankly, I thought the FCC encouraged such experimentation. This incident suggests just the opposite and I'm surprised that ARRL isn't screaming bloody murder.

All of the pieces fit together to make the whole person. I have used bits and pieces of some pretty obscure things I have learned, even if it just to give a historical aspect to what I may be arguing for. For this I have used history, literature, even art. No knowledge is wasted.

I graduated from Loughborough University, which is also quite hard to get
into and stay in. We did have to do Economics and Atomic Physics, but I
don't put those in the same category as arts subjects.

I guess by your definition I'm not a well-rounded or well-educated person.
The USPTO reckoned my EE degree was good enough, though.

Come on, Alun. Let's not go all nationalistic on us here.

Can you predict what you will make use of in your career? Right now, I
am making full use of my art classes, my technical classes, my
careerlong professional development, and all the other classes I took,
even though some seemed irrelevant at the time.

Hans, et al,

I seriously doubt that the FCC intends to discourage experimentation
and improvement of our rigs (whether home-built or store-bought).

IMHO, there is a big difference between modifying your rig to improve
it and "opening it up" to transmit out of band *for the purpose of using
it to create interference to other services where equipment must be
type accepted*.

It seems that, in this case, that is exactly what the individual in question
did, so I personally think that the FCC action requiring him to undo
the mods, that were done with the apparent purpose of enabling illegal
operation, is not inappropriate.

However, I also agree with your view that, as a sole remedy, this action
was pathetically lenient.

Dick:

In any case, it will be quite interesting to watch the developments of the next few years in the life of the ARS. All of the technical advancement that was promised throughout the code testing debate will either suddenly come into being, or will be notable by it's absence. There may, indeed, be a handful of new hams with professional technical qualifications who would finally obtain a license -- but what of all the others who simply have the desire to matriculate from the 11-meter band and be legally able to use higher power and spin a VFO knob? Are their contributions going to save our spectrum from re-allocation to commercial interests? Will they expand emergency communications capability to an extent which will cause federal, state, and local bureaucracies to eliminate any and all regulatory restrictions on the operation of an amateur radio station? Or will they just cause a lot of QRM for a while, become discouraged, and revert to inactivity? Oh well, as that ancient Chinese curse goes, "May you live in interesting times." Those times are just about to begin.

>> 73 de Larry, K3LT
>
>Gee Larry, isn't that incentive enough? Or do you need a government
>incentive to make something happen?

Brian:

No, I sincerely do not believe that this is "incentive enough." It certainly
didn't cut any ice with me, during the period of my life from age 14 to
age 28 when I longed to be a licensed radio amateur, but couldn't be
bothered to learn the Morse code. The thing that made me start beeping
was the "incentive" to get on the air at all -- in any mode, and then start
yakking into a microphone as soon as I was able. The irony is, I soon
discovered that CW was fun and a challenge, and sitting and waiting my
turn to yak was a waste of valuable time.

I think I'm pretty safe in saying that it was the code testing requirement
that caused hams to learn the code -- not any innate love or appreciation
for the mode.

Jim:

Your predictions seem to be right in line with my own expectations. However, as you say, there are a lot of variables that cannot be accounted for with any predictable certainty. I agree that there will be a great deal of upgrading activity, particularly in the first three years. I wonder how the FCC will deal with all the upgrades, since

their overall goal seems to be to reduce the administrative burden imposed by the ARS?

> > And you say you're not against the use of the mode, just the test, Carl?
> ;-)
>
> That's correct... I am NOT against the use of the mode.

Maybe. But the way you write about the mode makes me wonder. For
example, when you call those who use the mode "beepers" and other
disparaging names, a different image is projected by you.

> Just pointing
> out the fact that there are better modulation/coding techniques than OOK
> Morse ...

Ah, see, there you go. "Better modulation/coding techniques than OOK
Morse", with no qualifiers as to how they are "better".

It's like saying that French is a "better" language than English, or
that football is a "better" sport than baseball. Many English speakers
and baseball fans are going to see such things as put-downs. Even if
you don't mean them to be.

> that does NOT mean that I mind/care/object to others CHOOSING
> to use OOK Morse ...

Yet you wrote:

"there is nothing "magical" about Morse and the insistence on using
"wetware" instead of software to do the decoding is an anomaly of ham
radio."

and

"This "do it the hard way, rather than the smart way" approach to
things
that is held by so many hams leads to stagation, backwardness, etc."

and

"can be done, with proper modulation and coding"

"How ridiculous!!!!!!!"

All in reference to some other hams' choice of Morse for EME work. On frequencies for which there hasn't been a Morse test for over a dozen years.

>DON'T rely on cobbling together a Morse rig
>from scraps and running it from a generator powered by a hamster running
>on a wheel.

> only that I am disseminating some facts that the more
> "hard-core" Morse enthusiasts don't like disseminated because they fly in
> the face of the "Morse Myths" (like "Morse will get through were nothing
> else will.")

There you go again. I'm about as hard-core a Morse enthusiast as you will ever come across, yet have you ever seen me write "Morse will get through were nothing else will" ? I don't think so.

What you may have seen me write is something like is "Sometimes Morse will get through when nothing else available will" or "Sometimes Morse will get through when analog voice modes won't" and other true statements.

> > >This "do it the hard way, rather than the smart way" approach to things
> > >that is held by so many hams leads to stagation, backwardness, etc.
> >
> > And you say you're not against the use of the mode, just the test, Carl?
> ;-)
>
> See above ...

Yes. When you describe someone's choise of mode as "the hard way" and "ridiculous!!!!!", it becomes difficult to accept that you don't "mind/care/object to others CHOOSING to use OOK Morse ..."
>
> > >For example, EME can be done, with proper modulation and coding
> > >with much less power/antenna gain than with OOK Morse ...

>
> No, I personally haven't ... yet ... I've been working on other things. But
> the fact that *I* haven't personally done it yet doesn't mean it's not
> factual.

Yet you ridicule those who do it other ways. You say it can be done "better", but you haven't done it, which doesn't do much for your credibility among other hams, nor convince them of the rightness of your methods.

The way to make your point is NOT to put down the "traditionalists", but to lead the way by actually doing what you say is possible.

Imagine two stations with <100 watts output and single Yagis
conducting reliable EME. Imagine EME WAS between such stations.
Imagine articles in QST, QEX and other ham publications describing how
it's done and what great fun it is.

It's the difference between a positive attitude and a negative one.

> (I am not so hung up on myself that "my way" and "what I've done" are the
> ONLY ways that things can/should be done.)

Sure you are, Carl. For example, you insist that the only correct way
for the future of amateur radio is without any form of code testing,
regardless of what the majority wants. That's insisting on "your way".

As far as "what you've done", it's important to realize that most
people aren't going to want to spend their time and money doing
something the way you suggest
when you haven't done it yourself, *and* you call the way they do it
"ridiculous!!!!!".
>
> > Why does it bother you if some unnamed folks don't see things your way? If
> > you can do "better", go ahead.
>
> What "bothers me" is that some folks deny the fact that there ARE better
> ways than OOK Morse (apparently in an attempt to bolster their "real ham"
> and "everyone MUST know Morse" viewpoints)

That's because your statement is too general. You don't define what
you mean by "better" in any way. And you don't seem to accept that
Morse is better in some ways, while other modes are better in other
ways.

If you can do "better", go ahead. Define how your way is "better",
then go do it. Otherwise it sounds like "don't do what I do, do what I
say"...

That's how things change in amateur radio - somebody actually goes out
and does
it, and shows the way.

Build and publicize a system that will let hams work EME inexpensively
with
small antennas, low power and easily-duplicated equipment/software.
Pretty soon
those unnamed "traditionalists" will be completely outnumbered.

Do it, write it up and submit it to QST, QEX, CQ, Worldradio,
etc. They will love it. Look at the amount of ink PSK-31 has gotten.

But somebody (G3PLX) had to actually make it work, first. Did he go
around saying Morse and Baudot and ASCII RTTY were "ridiculous"? I
don't think so.

FEDERAL DISTRICT COURT ORDERS CIVIL JUDGMENT AGAINST RICHARD I. ROWLAND FOR UNLICENSED RADIO OPERATION Washington, D.C. -

Today, the Federal Communications Commission (FCC) announced that, in the United States Middle District of Florida, Orlando Division, United States District Judge, Honorable Gregory A. Presnell, granted judgment in favor of the United States to collect a civil penalty against Defendant Richard I. Rowland. The court ordered judgment against Rowland in the amount of $10,000 plus costs. The judgment is the result of an investigation that began in May of 2000. The Commission s Tampa, Florida Field Office received a complaint of an unlicensed broadcast station operating in the Longwood, Florida area. Commission agents determined that Rowland operated an unlicensed radio station on the frequency 97.1 MHz from a Longwood, Florida address on numerous dates in the year 2000. Rowland s unlicensed radio operation led to the seizure by U.S. Marshals and Commission agents of his radio station equipment in 2001. In addition, the Enforcement Bureau imposed a $10,000 monetary forfeiture on Rowland for multiple violations of operating an unlicensed FM radio facility, in violation of Title 47, United States Code, Section 301. After Rowland refused to pay the forfeiture, the Commission filed suit for collection through the United States Attorney in federal district court. The case was brought by the United States Attorney s Office, Middle District of Florida, Orlando Division. The operation of an unlicensed broadcast station is a violation of Section 301 of the Communications Act of 1934, as amended. Operators of unlicensed stations may be subject to civil monetary forfeitures of up to $11,000 per single violation or per day of a continuing violation not to exceed $87,500 for continuing violations. In addition, unlicensed operators may be subject to criminal sanctions, including a maximum $10,000 fine and up to one year imprisonment for a first offense. - FCC - Enforcement Bureau Contact: Lisa M. Fowlkes at (202) 418-7450 / TTY 1(888) 835-5322

OK ... "Better" in terms of weak signal performance, data throughput,
and reliability (robustness in the face of channel impariments and lack
of operator error in decoding).

Does that satisfy you?

> > that does NOT mean that I mind/care/object to others CHOOSING
> > to use OOK Morse ...
>
> Yet you wrote:
>
> "there is nothing "magical" about Morse and the insistence on using

There is nothing "magical" about Morse ... with the exception of the
(mis)use of the term "magical" in the nostalgia sense. (That doesn't

mean it's "bad" ... just that it has no magical, mystical properties ...
nor does any other mode, for that matter, it's just a matter of physics.)

> and
>
> "This "do it the hard way, rather than the smart way" approach to
> things
> that is held by so many hams leads to stagation, backwardness, etc."

I maintain that the statement is true. Note I said "so many hams" ... not
ALL hams.

> > only that I am disseminating some facts that the more

I know you're a hard-core Morse enthusiast, but you're not as narrow-minded
about it as SOME (I did limit the comment to SOME) ... and I don't see you
as having a "religious zeal" or "I'm superior" attitude ... to your credit.

> Yes. When you describe someone's choise of mode as "the hard way" and
> "ridiculous!!!!!", it becomes difficult to accept that you don't
> "mind/care/object to others CHOOSING to use OOK Morse ..."

Take me at my word ... I was talking about fanatical attitudes, not the
norm.

[more on EME when I have something to report ... this summer is
intended for some serious antenna work ... winter should bring some
progress on other projects that work demands have kept me from
longer than I had hoped]

> > (I am not so hung up on myself that "my way" and "what I've done" are

1) I believe I am right. YMMV
2) I am not at all convinced that "the majority wants" something other
than what I am advocating.

I've attempted to define "better" better above :-)

Not the point and most of us were well aware of the differences in
band/mode edges.

> I also (as did Gary Coffman, independently)

'nother sweetheart . . .

> postulate a strawman design
> (but something feasible, never the less) for a system that, in the 150 kHz
> of CW/data sub-band on 20m could support a very large number of
> 20 wpm Morse-equivalent QSOs with virtually no interference.
> That was immediately rejected by Morse fanatics,

What's this frigging "Morse fanatic" nonsense? I'm certainly no "Morse
fanatic", I probably spend as much time on an annualized basis with a
mic in my mouth as I do running CW. I use Morse and I support the use
of and testing for Morse.

This particular non-fanatic immediately spotted the fallacies and
impossibilities in your posts on the topic as they relate to any mode
which occupies an entire ham band and is overlaid/underlaid on narrow
modes particularly under weak signal condx. This is not fanaticism.
This is the same reaction some hugely overwheming majority of the
active hams today would reject on smell or sight. Including the
technically savvy amongst us. More like *particularly* the technically
savvy.

> who said something
> like:
> "We don't want no stinking keyboard mode." (My response was to
> make Morse I/O a user interface option. Still rejected.)
> "The fun of it is digging the weak ones out of the noise." (My response
> was, "You want channel impairments? No problem. I can program
> all sorts of simulated channel impairments into the system to make copying
> as hard as you want ... without having to trash the underlying, reliable

> communications system." Still rejected.)

Exactly and none of it flew then and it never will. The big apparent dent in your mindset is that where you come from logic rules all. Not an unusual problem one runs into in linear thinkers like engineers many of whom are well known for both their technical brillance *and* their, shall we say, ocialization "issues".

If logic drove everything we chose to do Carl nobody in their right minds would get married let alone have kids. But we do get married and we do have kids. Thus it also is with 99.99% of all hams. Hell, when ya get right down to it getting into ham radio is illogical for several reasons I can toss out. But we do it anyway, right?

You don't have to worry yourself about writing any simulators, sophisticated contest simulator programs have been around for years, all the predicatble parameters can be adjusted to suit the intensity of the pileups, QSB, QRN, code speeds, whacky callsigns, helluva lotta fun to play with. They also serve a very valuable role as contest logger and computer station control traininmg wheels. In the end they're neat electronic ping-pong games but IT AIN'T FRIGGING RADIO. Nobody is gonna go play electronic ping-pong so that you and Coffman can play band edge to band edge.

If you don't get it's your problem. But you actually do get it dontcha strawman?

> Some folks just WANT to do things the hard way and want to insist
> that others should be similarly constrained.

What "hard way"?? Morse on the air? You jest.

There are instances where it would have been a lot easier for me to get from here to there by driving on the sidewalk but I'm "constained" from doing that. Damned good thing too eh?

> transmit data reliably over transcontinental distances ... with power
> outputs on the order of 10 mW ... as an "underlay" to existing services that don't even notice that they are there.

Times how many stations?

QRPP PSK31 has done the same tricks. But PSK doesn't clobber the whole band, doesn't require the development of new equipment, didn't require a radical R&O to get on the air and can be done for the cost of some audio cables at most ham stations.

I notice that TAPR has given up trying to get spread spectrum on the air. Nobody in TAPR cares enough about SS to work thru the bugs. There's a loud statement about ham SS.

> But I have always said that I would not like to see the CW/data sub-bands

>73 de Jim, N2EY

Jim/Hansl:

The FCC has always been very incremental in it's enforcement policies. First warning is usually satisfied by a reply stating that the offending action has ceased, with the promise that it will not recur. Subsequent offenses usually start the suspension, equipment seizure, revocation, and monetary forfeiture ball rolling against the offender. This fairly light-duty corrective action would seem to be consistent with the FCC's usual modus operandi. It is more cost-efficient to get an offending licensee to comply with the regulations than it is to drag him through the administrative process which could ultimately result in loss of license, fines, and criminal convictions. The threat of more severe action is usually sufficient.

I'm sure Phil Kane will shed some light on this, if he hasn't already.

Phil:

I'd assume that I'm outvoted by way more than that! I just feel sorry
for all those poor hams out there in the less-populated call districts
who can't obtain a 1x2 or 1x3 Vanity call because they've all been
scarfed up by greedy out-of-district hams exercising their "rights."
I guess I was fortunate to get mine before all the 3-land calls were
stolen away! Of course, I could have asked for AL7LT, or KH6LT,
but I figured that those calls belong to someone who lives in either
Alaska or Hawaii. I've had to deny Delaware QSL cards to a few
Vanity Hams who did, indeed, go for "offshore" prefixes while residing
in the CONUS. I sent theirs back, of course.

So, you don't believe that a well-rounded background in the Arts and
Humanities creates people who are better able to think for themselves?
This attitude probably explains why Great Britain is welfare state about
to be crushed under the weight of it's enormous, dependant underclass.

>I do not beleive that it is necessary to make people study unwanted
>classes to qualify as an institution of higher learning, more that it
>disqualifies the college.

Well, if you want to ensure that there is an endless supply of crude,
intellectually impotent people in the world, I can understand why you
may think that way. You should run for a seat as a Labour Party MP.
You seem to have the right qualifications.

Kim:

You were confused because, as usual, you were reading for the purpose
of finding something negative to react to, as opposed to objectively
evaluating what was said.

>By the way, isn't stating that NCTAs "have been claiming forever that
>eliminating the code tests for HF access. . ." rolling us all into one
>"neat" little package?

No -- Brian (that's MISTER Kelly to you, little girl!) was merely stating the
facts about what the NCTA have promised what would happen when code
testing was taken "out of the way" of all the eager young geniuses who
are going to save ham radio from our present state of technical insolvency.

>I don't think people who'd like to see an end to CW
>testing all think alike at all.

Neither do I. I only go after the ones who whine about it.

>Have you ever seen me accuse you of being
>like Larry or Dick? They are two PCTAs and you are a PCTA also.

You just don't like Dick and myself because we won't pander to your inane, childish, and illogical parroting of what other people say, or to your callsign which Mr. Hollingsworth himself said has the potential to take the ARS "...one step closer to extinction." IOW, you're just fine with anyone who strokes your horrendous ego.

>We all have our own opinions about why we think something is a good idea.

And unlike yours, most of those opinions are being made by people with genuine operating experience. Sorry about the truth, Kim -- I know it hurts you, but I'm not going to look at a pile of crap on the floor and call it a bowl of cherries.

>
>Dee D. Flint, N8UZE
>

Dee D.:

Very interesting point. And, of course, 100% true. I would add that the one thing that gets prospective hams to learn the Morse code is the requirement to be tested for Morse proficiency in order to achieve upgraded HF privileges. How many New Age No-Code Extras do you think you can "sell" on the concept of learning the Morse code, just on the basis of it's operational characteristics or the fact that it's "fun" to do? Keep in mind, they can yakk on HF phone on any band and frequency they want, and with maximum allowable power. They will have legitimate, full-privilege General- or Extra-class licenses, without no requirement for code testing at any speed. So, how many do you think you can convince to try code and get them up to 20 WPM and become regular CW operators?

I know that for 14 years, nobody could "sell" it to me at any price. I'm just glad that one fine day I was able to be convinced that being a ham was worth enough to me to make the efford to learn and gain useful proficiency in this particular communications skill.

I predict that in a future ARS with no code testing, getting new hams to become CW operators will be a daunting, if not impossible, task.

I'll believe that when the U.K approach to technical professional
education programs is better that the U.S. approaches when U.K.
technological leadership comes even close to the U.S. on a per capita
or on any other basis.

ARRL knows what is best for the US ARS.

Or was it K0HB that knows what is best for the US ARS?

Does the FCC "encourage such experimentation?" I don't think so.
I read Part 97 as giving radio amateurs the option of doing so. Can't find any brochures or pamplets from the FCC ramping up the joys of experimentation at all. Maybe that was "Electric Radio?"

<elektros@yahoo.com> writes:

>I don't beleive either academic degrees or ham licences should require
>unnecessary stuff, that's all.

I agree with you...but that is unacceptible behavior in front of the Group
engaged in Group Think. Such as in here among the PCTAs. :-)

"Academic standards," i.e., the courses required to pass for a degree,
are NOT subject to debate as are US federal laws. As far as I know,
that is true in the UK. Academics set them according to what the
academics think is "necessary" for Their purposes. One of the
"necessities" is to keep their jobs at nice colleges and universities
where they can have a sort of "rule" over students, write nice initials
after their names (or in front), and have a measure of respect by not
having to go out and really work for their income. Academic institutions
keep the respect and titles in everyone's mind by constantly promoting
themselves as intellectual organizations...as if there were no other
intellectuals in the world but them. Shrug.

US amateur radio is sometimes thought of in the same way by a few.
ARRL uses constant self-promotion of itself in the same way as the
academic institutions. In the case of ARRL it is really survival to do so.
If ARRL runs out of income, it ceases to exist. Membership and product
sales are very important to their survival. In their survival efforts, ARRL
often gets too involved with itself to notice that it is promoting just what
a
minority in US ARS want to promote. For a very long time that has been
the "requirement" of tested morse code skills to achieve a license grant.

Why did they keep on with that code test thing for so long? My take is
that they bought into the requirement when young and their seniors got
their licenses that way. "They know what is best for the ARS" and all
that sort of thing. :-) That's a self-propagating idea, coupled with
belonging to a fraternal organization (extremely important to some),
keeps the "necessity" alive. The first hams HAD to use OOK CW
because that was the only way in the low-tech days of beginning radio.
Okay, so they stayed with it and were still at it when tubes (valves)
were first available. As old-timers they had some respect from new-
comers who thought they would learn by example. Eventually those
newcomers stayed with ham radio and beeping and, through mostly
longevity, became old-timers themselves. It's axiomatic that many
old-timers cherish the skills of their youth, nostalgia, etc., because
that is safe, secure, and doesn't require any extra effort on their part.

Enter ARRL and the 20-year reign of St. Hiram and the emergence of ARRL as the top national membership organization in the USA. To keep ARRL solvent, they published things they thought would be of interest to US hams. [they know what is best for hams...] Old-timers at ARRL rule over their fiefdoms and the BoD made the decisions. The OLD ways ruled because the old-timers wanted it that way. That came across in print, the major media of idea propagation among US hams of WW2 and earlier days. Printed media is not ephemeral, it stays unchanged as long as the paper holds up, all the words and data as-is for a very long time. Such is a "reference." Amateurs of the late 30s onward couldn't get much from radio-electronics industry texts since that larger (and growing larger) part of the world radio activity was beginning to dismiss amateur technological efforts.

So, in the post-WW2 era, there were old-timers who emulated their long-timers of their youth who, in turn, emulated their long-timers, etc., and morse code was hailed as the primary skill among amateurs. ARRL promoted that unceasingly. ARRL was ruled primarily by old-timers. Ham radio was all about working DX on HF with CW. Do morse and you were "good," don't love morse and you were "bad." If you didn't love and respect your elders, the morsemen in control, you were almost blacklisted.

Problem was that radio and all its offspring had an explosive growth that began in WW2 days. That growth curve increased exponentially with the arrival of working transistors, then integrated circuits. Things got complicated! Few old-time amateurs bothered to get into solid-state because it was "new"...and the old tube things of their youth was safe, secure knowledge they didn't have to learn. Affluence among the white US males allowed purchasing ready-made equipment and, eventually, most never bothered to learn the innards of their expensive boxes. They memorized the sales pitches and used those among themselves to show their "knowledge."

By the start of the Incentive Licensing plan, the time was ripe for the many generations old-timers to demonstrate their seniority through Titles and "proper status within the community." Highly important to them, of course, and to the ARRL BoD of the time and ARRL lobbied the FCC for it. FCC said "okay" and that was that...they had enough to do with all the other radio services. Now there was bona fide titled royalty within the US ARS and those who needed it could now claim "superiority" through federal testing! Marvelous for them. Not so good for newcomers, though.

What all the titled royal amateurs neglected was that there were now many more non-amateurs who had achieved extensive experience in radio and electronics and had communicated nationally/internationally without having a ham license or even had to learn/use morse codes. US ARS was now big enough and ARRL prominent enough that they could all continue their cozy positive-feedback way to keep all the OLD standards and practices as they were...except they now did it with ready-built solid-state equipment. Self-proclaimed mastership of radio went with the Titles...royalty is seldom without such things. ARRL and

its core membership were building technological and societal walls around the US ARS. The cry was to maintain the status quo.

By the 1980s times were indeed changing. Enough folks were pissed off at the code requirement and could get their voices heard at the FCC, past the traditional ARRL-dominated lobbying there. The FCC listened, even in the pre-Internet days. The sixth tier in the byzantine melange of license classes resulted, no code test needed. Horrors! cried the old-timer morsemen! Such cannot be! They are unbelievers in the might of morse! The Morse Test must continue! Heretics! No-coders are filth, unfit to associate with us mighty morsemen of the high frequencies! HF belongs to morsemen, get thee to the land of the lost above 30 MHz! The hue and cry was similar to the 1958 days of Class D CB creation.

So it went up until WRC-03. The IARU had (finally) seen the light to end S25.5 years before, but ARRL refused to budge. [they always know what is best for US ARS] ARRL took a "neutral" stance to present a PC image to the world. [at least they didn't go to war to capture the Weapons of Morse Destruction...:-)]

Now we've got a whole bunch of PCTAs hollering about "obey the law, take the morse test!" They know what is best for US ARS. They say so and all must believe them, lest they catch us after class and beat us up. All must believe them because they are mighty morsemen, strong, resolute, and with more pride and ego than any Iraqi dictator. Their word is the unwritten law. Morsemen rule...but their statues are starting to be toppled. The wrecking crews are arriving.

A very sick transit, Gloria Mundi. :-)

>You say it has been so since Marconi, now you say "for once."
>
>Which is it?

The world radio-electronics community recognizes Marconi and Popov
as the first to prove radio as a communications medium. That was in
1896. The first actual installation of the Morse-Vail Telegraph System
for wired landline communications was done in 1844.

Marconi was a shrewd and aggressive entrepreneur back two turns of
the century ago. Not one who, as amateurs are supposed to be, would

not hesitate to ask for pecuniary interest for his efforts. Gugie did a
LOT of asking and made several such bundles of money.

>> In my own case, having been a radio nerd back when radio was the about

The same thing that has actually held it up all along ... the majority
of good hams without attitude problems that detract from the service,
the work they do in technical, public service, and other ham pursuits,
and (I believe) an influx of "new blood" ... some younger, I hope, so
that our demographics improve for the future, and some more techically
inclined who can elmer, develop new things, etc.

Having taken a code test has nothing to do with these things.

> This is the same reaction some hugely overwheming majority of the
> active hams today would reject on smell or sight. Including the
> technically savvy amongst us. More like *particularly* the technically

> savvy.

The "strawman designs" that Gary and I postulated did NOT contemplate
the use of SS across the whole band as an "underlay." The modulation was
completely different, with a fair amount of coding.

> > who said something
> > like:
> > "We don't want no stinking keyboard mode." (My response was to

copying
> > as hard as you want ... without having to trash the underlying, reliable
> > communications system." Still rejected.)
>
> Exactly and none of it flew then and it never will.

Why? ... if it looks to the user EXACTLY as "traditional Morse" one would
not be able to tell the difference (and therefore should have no logical,
rational
reason for rejecting it). The idea is that the "challenge" that some relish
can be
provided, as I said, without "trashing" the underlying, reliable
communications
system.

> You don't have to worry yourself about writing any simulators,
> sophisticated contest simulator programs have been around for years,
> all the predicatble parameters can be adjusted to suit the intensity

> they're neat electronic ping-pong games but IT AIN'T FRIGGING RADIO.
> Nobody is gonna go play electronic ping-pong so that you and Coffman
> can play band edge to band edge.

I *was* talking about RADIO ... a system that would communicate over
distances via radio ... just more reliably ... and THEN adding the
impariments
("challenge") at the receiving end to satisfy those who "like to dig the
weak
ones out of the noise/QRM."

> > transmit data reliably over transcontinental distances ... with power
> > outputs on the order of 10 mW ... as an "underlay" to existing services
that don't even notice that they are there.
>
> Times how many stations?

Quite a few, but to be honest I don't know the exact number (and if I did, I couldn't say).

> QRPP PSK31 has done the same tricks. But PSK doesn't clobber the whole

>
> I notice that TAPR has given up trying to get spread spectrum on the
> air. Nobody in TAPR cares enough about SS to work thru the bugs.
> There's a loud statement about ham SS.

IMHO, TAPR's SS effort was doomed from the start by being overly complex.

Why not? Is the mighty morseman offended by those who do not
love, cherish, honor and obey morse code?

If thine eye offend thee, cast it out.

>We don't know that the deaths of the Columbia (or Challenge) crews wasn't
>long, lingering, and painful. They may have been well conscious long
>enough to know they were doomed, and had nothing to do to prevent it.
>Unfortunately, wishing the same on Lennie won't do, either. Lennie has
>proven himself to be beyond contempt. Don't fall into the same pit he did.

Roll, you large bag of fat wind, you've never worked on ANY space
project, NEVER shook hands with any astronaut and look them in the
eye (I did...John Young is a nice, quiet sort, not very tall...Bob Crippen
is taller, more outgoing...both rode the air-drop Enterprize as well as
the first STS manned spaceflight). They understood the risks they
were taking. By STS 51J the press and public had colored your
thinking such that spaceflight was all just a safe, jolly jaunt in space.
You've never known anything about manned spaceflight so you project
your fantasies as if they were final judgement. You know NOTHING
about any high-tech human endeavor.

You want very much to "identify" with things you've never participated
in, talk about it like you were really "there" but you never were. You've
never done any military 24/7 radio communications nor any civilian
professional radio communications and you feel "superior" in both
morals and ethics over all "no-coders."

If you want to be a syncophant to the Garbageman, go right ahead.
When anyone wants an ideal role-model for the US Amateur Extra
radio amateur, they can always go to you or the Garbageman. :-)

No doubt about it, the band conditions were the determining factor.

Actually the biggest problem is lack of activity by the current hams. If we take the figure of 600,000+ hams and calculate the number of QSOs per day if each one had one QSO per YEAR (assume it takes two hams for a qso), thats 300,000 exchanges per year or nearly 1000 per day. That would keep the bands pretty busy. But instead we hear the same people over and over on the VHF and HF frequencies. We have 150 members or so in our club and I only hear about a dozen on the repeater regularly. It's the same dozen that do VHF simplex and SSB. We need to get those already licensed more involved.

Not a valid comparison the way you put it. If the person isn't interested in the privileges, it doesn't mean he is lazy for not getting the endorsement. It's the person who wants the privileges and isn't willing to get the endorsement that would be considered lazy.

I do not think it will have any effect on tinkering or experimenting. The reason that he was ordered to do this was because after the mod, he deliberately violated the regulations governing the amateur radio service by transmitting out of band etc.

>
> I don't have a single peice of equipment which I have not "improved"

> I'm surprised that ARRL isn't screaming bloody murder.

Yes the FCC and ARRL do encourage this experimentation. But remember that the offender was committing some rather serious violations of the regulations. The FCC can modify the operator/station license in almost anyway they see fit when someone has committed such violations. The ARRL would have no reason to scream bloody murder about the guy's penalty.

Actually no it doesn't as each mode has conditions under which it excels.
You need to more precisely define the conditions and specify which mode you
are talking about.

Yet by learning Morse as a requirement to yak, you were still not
convinced that it was fun. How long did you spend in each amateur
grade?

Nor the ultimate utility of "always getting thru."

What will it take to get people to use Morse?

After having exhausted all other venues.

You have repeatedly
> avoided answering any of them.

Yes, that is correct. But if you do your research you'll find I have
stated much of what you asked in previous posts to rrap. Get to work.

> > Ha! That's a good one.
>

How is it that you didn't believe me then, but you're willing to
believe me now? I just don't get it.

To be honest, I don't think there is any answer that will satisfy you.

Brian

Yes, I agree!! Furthermore, I think, IMHO, that that is what this newsgroup should continue to be about---the exchange of valuable information and the education of those less versed but definitely interested ones (people like me) in the ways of the firebottle. People who are intelligent enough to be interested in 50 year old (or more), 50 lb. (or more) pieces of radio equipment usually are intelligent enough to refrain from senseless flaming. Those with more neanderthal sloping foreheads are the ones who seem to knock what we do. There's ideas to be shared, and tips to be learned in keeping these fine old pieces of gear WORKING!!

> Is radio a great hobby? I sure think so. How about you?

Yeah, I saw it and passed. There's just so much a body has time to
"handle". SS is OK on the HF ham bands but BPL is bad. Beats me.

> The rallying cry I recall hearing was "no setasides for legacy
> modes"...

What the hell is the definition of a "legacy mode" anyway?

Ayup.

> Some basics:
>
> Suppose Amateur A operates a 100 watt 15 meter SSB rig into a decent
> vertical.

As an aside there is no such thing as a "decent" vertical if used
above 40M.

> Let's say he is S9+20 dB or louder over, say, a 5 mile
> radius, and his signal is 2.5 kHz wide. That is, a 2.5 kHz wide rx

> like noise, but its level is 20 db lower - S9. If Amateur A drops his
> power to 1 watt, the noise will drop 20 dB more - to about S6.

OR, in the cw setasides where 4-500 Hz filters are commonly used the
received energy from SS signals would be reduced by 80% vs. the case
with the 2.5 Khz ssb filter. Still ridiculous.

> So we have an S6 noise level within the above area over 250 kHz of the
> band from ONE station running 1 watt.

Who sez they would only run one watt and how many of 'em on the air
simultaneously would it take to (fill in the blank).

> Spread the signal over the
> entire band instead of 250 kHzand the noise level drops less than 3
> dB. How much weak-signal DX you gonna work with an S5 noise level over
> the entire band?

Zilch. I routinely work stations which don't even flick my
oversensitive zero-inertia S-meter into the first LED segment.
Whatzzat if you believe S-meters, an Sï¿½?? 25-30 dB weaker than the SS
signal?

> Note also that if propagation is decent, it's not unusual to hear
> S9+20 dB signals from 100-watt-and-simple-antenna stations hundreds or
> thousands of miles away. What if each one of those signals dumped its
> own S5+ noise level on you, even though they were running 1W out?

The band would be rendered useless for the hordes by anybody running
SS and that's why it ain't never gonna happen in our lifetimes.

Wait a minnit here, I sense a hidden bag of worms. You did a nice job with explaining the type acceptance and type certification complexities a short time ago.

You explained that type certifcation of ham xcvrs is based on rcvr spurious emissions supression requirements. All well and good so far. Maybe I missed it but I did not pick up on they fact that hams can't mod their rcvrs unless the mod designs are factory approved. This is news to me and raises a flag.

We all know that rcvr mods are and have been routine ever since Hector was a pup. There are innumerable websites stuffed with how-to-do-it instructions for making all sorts of rcvr mods and there are mod kits for sale for just about every ham HF xcvr out there today. I seriously doubt that Yeasu for instance puts any assets into "approving" Joe Slobotnik's latest circuit mod for boosting the performace of say FT-1000MPs in some way. Nor have I ever seen any warnings in the websites which refer to the consequences of ham-developed mods beyond the usual possiblity of voiding manufacturer's warranties if one futzes with the innards with a soldering iron.

Are you saying that if I install any of these types of mods in my Yaesu xcvr I'm in violation?? If yes then we have one *helluva* lotta violators roaming the bands, thousands of us.

Actually, the neat thing is that current technology makes homebrewing
more fun than ever! I can now build one hell of a nice receiver using
DSP technology and doing most of the IF processing in the digital domain,
using off the shelf stuff. And I can get performance that beats anything
on the shelf right now.

What I want right now, though, is a PLL on a chip that will take a simple
BCD or binary encoded frequency, and produce an unmodulated carrier. I
would be surprised if someone hasn't built something like that already
using one of those Sanyo mask-programmed microprocessors with the PLL on
the chip like a lot of CBs use today. Doesn't have to be a PLL, it could
be DDS too, but I want a single chip synthesizer that will tune 160 through
10 meters continuously and I'd like to avoid the microprocessor interface.

>Time to stop whinging, and face the facts...Real Technology has overtaken
>you all!

Whinging? I'm not winging, I'm having a great time! Real technology
makes this a great time to be a ham.

Mike,

Assuming your hypothetical...
IF the non-phone segment is being underused, then
the CW users will likly lose bandwidth. BUT, if the non-phone
segment is just as crowded with users, then there's
no valid argument for phone expansion. The burden

will be on the users of non-phone modes.

Cheers,
Bill K2UNK

Carl, isn't it odd that the code exam proponents are the first to
predict gloom and doom, some even willing to work for the demise of
the service? Yet it is those that haved worked to have code exam
eliminated are the most optimistic about the service. There is
something else at work here than the mere code exam.

Spock would say, "Captain, I find it quite illogical..."

Despite the fact that the non-phone segment is not under utilized, the phone people are already crying for the non-phone segment. This cry will continue to grow. Why should the burden of proof fall on the users of the non-phone modes?

Yeah, I remember when I first discovered there was "newsgroups" and then found this one. I thought to myself, "Self, this is great. Meet more hams and have great ham discussions." NOT. Pretty much the first exposure I had to anyone on the newsgroup was Larry Roll, with his obsession about my callsign...blah, blah, blah.

Then I learned that many of this newsgroup's participants can't have any kind of discussion without pulliing some kind of ego trip up out of their pants.

The long and short is that this newsgroup became a way for me to take the day's frustrations out and pretend that my targets were this boss, or that boss, or this co-worker or that co-worker...heh heh

I think the public service aspect is one of the greatest things about ham radio...although I'm not much involved any more. Around here, one spends more time dealing with political garbage than getting any real constructive stuff done. I wasn't in it just for the sake of getting out there and being in the middle of storms--I also wanted to see this area become really great and one to be looked up to.

EOD is not "one notch below the SEALs". That's like saying a running back is one notch below a wide-receiver. They have two different jobs. If you're talking about dealing with explosives, than the SEALs are one notch below EOD. If you're talking about killing people, then EOD is one notch below the SEALs. If you're talking about diving or parachuting, then their exactly the same. EOD school is twice as long as BUD/s. There are only 650 EOD techs versus over 3,000 SEALs. The ASVAB requirements for EOD are far higher than SEALs. Both groups are qualified in the exact same things. Neither is better then the other. They are similiar groups with different missions.

This could be interesting, Scott. I haven't been keeping close track of the DDS stuff, but a few years ago you could get devices that were clocked at 40 to 50 MHz with 32 bit math (frequency steps would be tiny). Of course, even at 50 MHz, 15 meters would be approaching the Nyquist frequency. More useful might be a lower frequency oscillator (in the 5 MHz region) and then a mixer to the desired frequency (of course you have to figure in the IF too). I'm curious if the DDS stuff might also have a quadrature output. That could be *most* interesting as I suspect a decent sound card could take your monaural voice and, with DSP, put that into quadrature audio (left and right channels in quadrature). That, plus DDS with quadrature outputs ... and I could see a direct conversion receiver with *real* selectivity and selectable sidebands. I'm sure the DSP could provide better quadrature relationships and maintain even responses between channels than a number of filters. With a method to equalize the amplitudes of both the DSP outputs into the mixers as well as equalizing amplitudes of the DDS outputs to the mixers - we might see unwanted sideband and carrier suppression equal to some of the best radios around. Do you know if any DDS chips supply both a sine and cosine (quadrature) output? Or is this pretty much standard?

Some of the newer DDS devices (check Analog Devices' website) are clocking
at up to 400MHz (maybe more by now, as I haven't looked in a few months).

Some provide quadrature outputs.

Some provide on-chip phase modulation and/or FSK.

There are also techniques using harmonic aliases that will allow a
relatively low
frequency DDS to effectively produce a higher frequency signal ...

Lots of interesting stuff in the data sheets and app notes.

I dunno, if one person understands it and happens to have a source for PLLs,
I'll be happy.

It's true, though, that I can go to the trash bins down the street, and pick
up VCRs with wideband electronics that will carry from DC to 4 MHz, TV sets
with great digital tuner stages, really slick sweep amplifier stages that
can put out decent power across the whole HF band, and all kinds of nifty
stuff. People complain about technology today making homebrewing impossible,
but frankly I would have given my eyeteeth for this sort of salvage when
I was a kid.

Hansl:

I have no problem with the penalty imposed. If Mr. Swift complies, in the allotted time frame, he obviously would show that he is genuinely interested in keeping his license by complying with the regulations. I'm also sure that his visit to the FCC Field Office will include a thorough reading of the Riot Act, not to mention the Communications Act 1934. From that point on, if he re-offends, he's toast.

Requiring Mr. Swift to re-connect and encapsulate his jumper doesn't bother me one little bit. This never would have happened if he wasn't stupid enough to actually transmit on a Marine frequency with non-type accepted equipment -- and make false distress calls, to boot. He obviously got caught on his first offense, and for a first offender, this "punishment" is appropriate and adequate. BTW, I'm only assuming that the distress call did not initiate an expensive SAR response by the Coast Guard. Were that so, I'd also be handing him the bill for the costs involved, but that would be a DOT/Coast Guard action, not the FCC.

Thanks for the tip, Carl. Geeze, Analog Devices. I should have remembered. It has been quite a few years since I worked in Materials Engineering and actually had a feel for the current state of the art. Heck, I was only off by a factor of 10 on that clock rate! 10 percent is one thing, but by a decade! :) LOL. Be grateful I didn't suggest wiring a bunch of 12AU7s together in flip flops. Hmmm ... where'd I put that core memory anyways? BTW, those 400 MHz devices are 10 cents per dozen, right? :)

I will check out the site, however; again, thanks for the tip.

Well who do you think ruled India during the Raj? I'm not proud of it, but
it does give us a certain common heritage.

> If BPL is fired up you have no HF SPECTRUM.

Particularly if you're strictly a phone operator. Those of us who are
code-proficient will most likely be able to keep communicating
in CW with our 250 Hz notch filters engaged!

Anyone who thinks that BPL will be stopped in favor of amateur radio
is due for a rude awakening -- probably in the form of a very loud
buzzing noise on his favorite SSB net frequency! We'll also get our
chance to see whether PSK-31 really IS better than CW for "getting
through" under adverse conditions!

Brian:

LOL -- my TIG for each license class was approximately 2 months as a Novice,
2 months as a Tech, 4 months as a General, 1 year as an Advanced, and the
rest of my life as an Extra (20 years so far as of Feb. '03). All these are
just
guesses, probably accurate to a few weeks or so, but I'd have to dig out my
old licenses to know for sure. Unfortunately, the only one I'm missing is my
old Novice ticket. I have it somewhere, but it's buried so deep in junque that
I haven't seen it since my Tech upgrade in 1981.

I probably did most of my phone operating as an Advanced, because it
was during that time that I had a mobile HF station in my '78 Plymouth
Horizon. However, I also did a LOT of mobile CW as well. I also operated
phone from Germany (two two-year tours) as an Extra, with a German
reciprocal license. But then again, CW operation outweighed phone by
at least 10 to 1. Phone is just too boring. When I'm copying CW, I'm
actively doing something besides listening to the same old crapola over
and over again -- even though what I'm copying IS the same old crapola!

I don't know. What would it take to get YOU to use it? For me, it took
a code testing requirement, which caused me to learn and use the code
in order to meet the requirement. You don't believe in the requirement, so
obviously, your mileage varies quite a bit. So tell us -- what would it take
to make you a regular CW operator with 20 WPM proficiency -- something
that I have no doubt you are capable of?

JJ:

The problem there is, nothing has convinced me of it's "greatness" as
much as Morse/CW has! And the only way I found that out is when
I endeavored to meet the *requirement* to be tested for Morse code
proficiency! This opportunity will now be lost forever among new radio
amateurs. The Morse code is not the kind of thing that attracts people
on its own merits, I'm afraid. At least, it wasn't that way with me.

>Hasn't that been disproved?

It hasn't been disproved to me, but then again, I have a lot of experience
using BOTH Morse/CW and a variety of digital modes, so I have seen for
myself that the saying "Morse gets through when everything else fails"
is apparently true. I have had many operating sessions when PSK-31
signals became useless, while I was still able to communicate in CW.
In fact, a lot of times, I've been able to identify PSK-31 signals only when
the CW ID came on after the station stopped sending! However, anyone
with an Anti-Morse/CW agenda will not be convinced of that.

Kim:

I know what I've posted, both in the past and in the present. I have
repeatedly posted replies to your own posts in which I have attempted to
deal with you as an equal, as an adult. I have most recently attempted
to stifle a disrespectful remark made at your expense, and you have
seen fit to react to it in an ungracious and disparaging manner. You
obviously have no intention of ever emerging from your inane, childish,
immature mode of thought, and continue to persist in personal attacks
against those of us who are best able to challenge you, since you know
you aren't up to the task of debating us on our level.

Ordinarily, I would ask you to reflect on this and consider a reply, but
I have been repeatedly shown that that is too much to ask of you. I have
tried to treat you with respect, but if I do not receive equal consideration,
all that will happen is that you will continue to make a fool of yourself,
and I will continue to be the one pointing to the errors of your ways.

Lennie:

Uh huh. Tell you what. Next time you see a gen-u-wine astronaut in person, one who does have a ham license (Technician class or other), go ahead and tell him or her that he/she gets to keep it for a decade or so or until their shuttle burns up upon re-entry. Go ahead, do it. I'm sure that their reaction will be quite emotionally detached. However, they may be wondering why YOU, someone who has never travelled on a space vehicle, would make such a callous comment. I'm also sure that like Steve and myself, they would consider you to be beneath contempt for having made such a comment.

> characteristics or the fact that it's "fun" to do?

(major snippage)

Larry:

"Fun" is merely a perspective.... other people find, for example, football
fun. Personally I can't stand football. As far as morse code as a skill,
that is a different debate. Fun is merely in the eye of the beholder.

I would have to agree with that statement in its basic form.

I would also add and feel pretty safe in saying that some of those people that were required to learn the code, some may have learned it as a requirement for the license set forth and might care for it, and some might have turned out loving it like yourself.

Now let's look at that phrase "pool of trained radio operators" Dee. The
vagueness of that can create some issues, such as what type of training???

Being able to handle message traffic, would be an extremely important detail
in training IMHO. How many people can formulate a formal messagegram??
Even though I am one of those low-life codefree techs, I still can.

I don't think anyone, unless they have a crystal ball, will know the answer to that one. You guys down there around the Detroit metro area have Detroit Edison, correct?? Up here it is Consumers Energy and the long standing joke is "What is blue and white, and sleeps three??" "A Consumers Energy truck!!!!!"

Take out one good substation or main feed line (ones in the thousands of volts range) up here, and that area is gonna be out of power for DAYS! Lighting a fire under the crews butts is the main focus to get them to finish the job. From a past experience on a fire call, we waited for over 6 hours one time "babysitting" a powerline across a major roadway and the excuse was something to the effect that they had to take their lunch/dinner hour.

Well, a generator with at least 20-30 gallons of gas would be a good start. Storage of that much gas may be a different issue though. I wonder if there are any generators for the general residential public out there that could run on propane?? One could use one of those 500 gallon "pigs" and have that last a looooonnnnggggg time.

A different direction could also be using, like mentioned below, car/truck power! I have dual batteries in my pickup truck and a hi-amp alternator, and have (2) 750+ watt DC-AC inverters mounted under the hood. As long as the truck can idle on a full gas tank, I have quite a bit of both DC and AC power from that vehicle.

Only if morse code is "so valuable" as some claim it to be here, then it should be a problem eh? If it is so damned valuable, all radio services should have to learn it.

(And believe it or not, it happens alot more often than 1 in 10,000,000.)

Hans,

Step back a minute and look at what this newbie actually did.

He allegedly cut a wire in a manufactured piece of amateur equipment so that he could *illegally* transmit on frequencies he was *not* authorized to use.
>
>I don't have a single peice of equipment which I have not "improved"
>from it's original schematic.

Neither do I. However, neither have I modified any equipment so that I could *illegally* transmit on frequencies I am *not* authorized to use.

>Frankly, I thought the FCC encouraged
>such experimentation.

Not when the end result is *illegal* transmission on frequencies the "tinkerer" is *not* authorized to use.

And to make it all that much worse, he transmits false distress calls on a marine freq.

>This incident suggests just the opposite and
>I'm surprised that ARRL isn't screaming bloody murder.

I'm glad the ARRL is keeping quiet. This guy gives ham radio a black eye. You wanna defend his "right" to modify his rig to a bunch of emergency personnel who scrambled to answer the phony distress calls?

I do NOT want one cent of my dues, or one second of ARRL personnel's time, spent defending the modification of amateur equipment for *illegal* transmission on frequencies hams are *not* authorized to use.

No, Scumbag, don't een TRY to shift this to anything even
remorely tied to Amateur Radio, let alone Morse Code. This is about
how UGLY and SCURRILOUS one person can get.

You have to understand the liar behind the postings, John.
Leonard H Anderson is one of the most prolific, hateful, spite-filled
pathological liars to ever darken USENET.

That he can even consider, let alone publish, the hateful and
just plain mean-spirited trash he just let out and then try to
"justify" it in some Morse Code related rhetoric is absoulety
shameful.

I thought his attempts to embellish his Army "career" record by
assosciating himself with Soldiers who died 3 years before he was even
sworn in was disgusting.

Lennie puts the "scum" in scumbag, that's for sure.

Personal experience with colleagues and other anecdotal evidence.

The way that you, Dick, and *some* others look down your noses
at folks who aren't interested in code and object to unnecessary
"hurdles" sure doesn't help to bring new folks into ham radio either.

I imagine that except for the sudden bullet to the brain we all
have some brief moment when we realize that "this is it".

I can't even begin to imagine what it must have been
like...strapped in, fire all around and knowing it was all ovr but the
dying.

How ANY human being with a shred of decency could have made the disgusting, callous and thoughtless comment Lennie did is beyond me.

What a creep.

Larry, if it's "the same old (boring) crapola," why don't you sell your
gear, let your license lapse (or surrender it for cancellation) and find
an avocation that's not boring?

[someone else asked the following question ... it reallly doesn't matter
who]
> >What will it take to get people to use Morse?
>
> I don't know. What would it take to get YOU to use it? For me, it took
> a code testing requirement, which caused me to learn and use the code
> in order to meet the requirement.

Larry ... you admit that you wouldn't have learned Morse if you had not been
(effectively) forced to ... you happened to decide that you liked it
afterwards.
Many folks that have followed the same path NEVER liked Morse and put
the key in the drawer (or sold it, or gave it away) after passing the Morse
test to get the privs they REALLY wanted, never to use Morse again.

>You don't believe in the requirement, so
> obviously, your mileage varies quite a bit. So tell us -- what would it
take
> to make you a regular CW operator with 20 WPM proficiency -- something
> that I have no doubt you are capable of?

As you well know, I also don't believe in the requirement.

I know that many PCTAs here doubt my claim, but early on while constrained
to CW on the novice bands, I actually got to the point where I could carry
on
a QSO (more or less in my head for std. QSO stuff, writing down details for
the log) at something close to 20 wpm. Once I upgraded to Tech and got

involved in VHF/UHF repeaters, packet, etc. I lost interest and never went back to Morse.

Could *I* become proficient at 20 wpm ... certainly, with enough use and practice. Do I *care* to? The answer is obviously "No."

There is essentially nothing that could make me interested in becoming "a regular CW operator with 20 wpm proficiency."

Does this make me a "lesser/2nd class ham?" I certainly don't believe so, Larry, any more than I believe that the fact that I have every reason to believe that I am more technically competent than you makes me "superior in all respects" to you. You, however, believe that your Morse ability makes you "superior to all no-code hams." (You've said that over and over here, along with all sorts of disparaging remarks about no-code hams.)

Why don't you try treating hams who have gotten their licenses (or upgraded) under the new rules with the same respect that you'd like to be treated with?
(I promise you, it won't kill you. :-)

> And right there you have it!
>
> - Mike KB3EIA -
>

Mike,

Don't read Bill's comments above as "NCI Policy" or "NCI Goals/Agenda" ...
that's
simply not the case.

Bill's just stating the obvious. (And since what CW fans refer to as "the
CW
bands" are actually the "non-SSB/phone, CW/narrowband digital modes bands,"
the occupancy thereof that Bill refers to need not be solely CW users, but
users
of other digital modes as well.

Collectively, they (CW and digital users) need to "use it or lose it" in a
long-term,
practical sense (even ARRL says "use it or lose it" ... see Dave Sumner's
recent
column on the new channels near 5 MHz). That, I am sure, is what Bill meant
when he said "The burden will be on the users of non-phone modes."

HOWEVER, phone band expansion is NOT an NCI agenda ... the ARRL has,
though, asked the FCC in the past to expand the phone bands by "refarming"
the Novice bands ... and, if the FCC were to see that roughly half of our HF
bands were grossly underutilized, they might, of their own volition, decide
to
do some "refarming" in the form of phone band expansion.

As I have said over and over, I would NOT favor/support phone band expansion
at the expense of the CW/digital portions of the bands.

I screwed that one to the wall good din I? It was late. The Scotch was
lousy.

Don't duck the bullet Alun, I don't have to try again, you bloody well
know what I mean.

God help science, engineering and western civilization the day
American universities don't have license to pound at least some
modicum of literacy into the thick skulls of the geeklets.

I had to read it a few times. I think the reason for poor performance in
UK engineering has nothing to do with the quality of UK engineers and
everything to do with the culture of UK companies, in which the engineers
are not in charge, but instead the accountants are. And this is not
because we don't study business subjects (we do), or because we don't do
English or History or 'Western Civilisation' in college (the accountants
don't either).

As I understand it (and I freely admit there are gaps in my knowledge of
your system), you can get a 4-year degree over here with 120 (?) semester-
hours of credit, and maybe only half of it has to be in your major (?).
When I sat down and tried to calculate it (from old timetables, since
there are no hours on my transcript, only grades) my 3-year UK degree
included about 150 semester-hours of classroom time, of which about 120
semester hours was in engineering subjects, the rest being things like
economics, finance, mathematics, etc.

> and reliability (robustness in the face of channel impariments and lack
> of operator error in decoding).
>
> Does that satisfy you?

Not really. How about this:

"There exist some 'digital' modes other than OOK Morse which
outperform OOK Morse in various performance measures such as (but not
limited to) weak signal performance, data throughput, robustness in
the face of certain channel impairments, and lack of decoding error,
though not necessarily all at the same time. OOK Morse will outperform
all other 'digital' modes now in use in equipment simplicity and
adaptability to human operator encoding and decoding by non-visual

means. OOK Morse will also outperform some other 'digital' modes in
various performance measures such as (but not limited to) weak signal
performance, data throughput, robustness in the face of certain
channel impairments, and operator-detected data errors."
>
IOW, it all depends on what criteria you use for "better". Morse is
better for some things, while other 'digital' modes are better for
other things. Or perhaps we should say that Morse is better in some
way, while other 'digital' modes are better in other ways.

For example, look at PSK-31. Uses very little bandwidth, has some
error detection/correction, very good weak-signal performance in the
face of Gaussian noise. OTOH, it requires a very stable transmitter
and receiver, and is usually implemented by means of a
soundcard-equipped PC, greatly increasing equipment power consumption
and complexity. PSK-31 is also susceptible to phase distortion and
noise, both in the equipment and the transmission channel. (This is
one reason why it is sometimes possible to 'hear' a PSK-31 signal but
the decoder cannot decode the received signal).

Other 'digital' modes have their own strengths and weaknesses.

> > > that does NOT mean that I mind/care/object to others CHOOSING

>
> There is nothing "magical" about Morse ...

Sure there is - it's fun for hundreds of thousands of hams all over
the world. But of course that fact alone is no reason to have test for
it.

You're missing some of the main motivations of most radio amateurs,
Carl - they see radio as fun, as an end in itself, as "magic". That
"magic" is not limited to Morse code, of course. But take away the
"magic" and you take away the motivation for most hams.

Maybe "There is nothing "magical" about Morse" for YOU, but for
others, there is.

> with the exception of the
> (mis)use of the term "magical" in the nostalgia sense. (That doesn't
> mean it's "bad" ... just that it has no magical, mystical properties ...
> nor does any other mode, for that matter, it's just a matter of physics.)

You're missing the motivational forest for the reductionist trees,
Carl.

Consider an analogy - why do people bother to learn how to play
musical instruments anymore, and pay serious sums of money for
instruments and lessons, when almost any music and instrument can be
synthesized much more easily? Why do orchestras still exist, and why
do people go to concerts, when so many excellent recordings exist,
more are being produced every day, sound reproduction quality is
excellent and the whole thing can be synthesized by feeding the sheet
music into a computer anyway?

The answer is simple - people want to experience the "magic" of live
perfomance by human beings.

Or consider this: Why are there so many different type fonts? It's
understandable that there be different sizes of type in, say, a
newspaper, but why does ever wordprocessor allow such a wide range of
choices of what the letters and numbers look like? Does the meaning of
a word change if it's printed in Arial Bold instead of Times New
Roman?

> > and
> >
> > "This "do it the hard way, rather than the smart way" approach to
> > things
> > that is held by so many hams leads to stagation, backwardness, etc."
>
> I maintain that the statement is true.

It's your opinion, nothing more. Is the marathon "stagnated and
backward" because it's done "the hard way"? After all, it would be so
much easier on roller skates. How about swimming - why won't they
allow the use of flippers in swimming competitions?

If you say those things aren't "technical", just look at Indy-car
racing. All sorts of limitations on what can be entered into
competition on that circuit.

> Note I said "so many hams" ... not ALL hams.

I did. "so many hams" implies that there are a lot of them.

> Take me at my word ... I was talking about fanatical attitudes, not the
> norm.

Who defines what is 'fanatical'? Many would say that the insistence on
total removal of code testing is 'fanatical', given the extremely
basic nature of Element 1 and the many training methods now available.

And the fact is that you were ridiculing others' choice of mode for a
particular use, while not being able to demonstrate a 'better' way.
>
> [more on EME when I have something to report ... this summer is
> intended for some serious antenna work ... winter should bring some
> progress on other projects that work demands have kept me from
> longer than I had hoped]

OK, fine. Let us know when you have something working. Please note
that the challenge is to develop a system that is easy and inexpensive
for most hams to implement. For example, it should not take 'serious
antenna work' for such a system. A single Yagi or small dish on a
polar mount with an inexpensive rotator/indicator is what's needed,
with all parts readily available. Just a suggestion if you want the
system to ever be widely accepted.

>
> 1) I believe I am right. YMMV

But you INSIST on your way (no code test of any kind for any amateur
license anywhere) as the only way.

> 2) I am not at all convinced that "the majority wants" something other
> than what I am advocating.

Look at the comments to 98-143. The MAJORITY of those who bothered to
comment wanted two or more code test speeds, and no "sunset clause".
That is very, very different from what you advocate.

There hasn't been an effective poll or survey of what the amateur
community wants in the code-test area in many, many years. So nobody
really knows. But when it mattered, the majority of those who
expressed an opinion disagreed with you.

I think FCC knows this and will bypass any NPRM, NOI or other
rulemaking method that allows public commentary, and will simply dump
Element 1 by MO&O as soon as they can do so legally. One little
sentence, something like 'Credit for Element 1 is hereby granted to
all applicants for and holders of an amateur radio license of any
class'. Poof, bye bye code test, game over, thank you for playing.

Your new definition is somewhat better but still far too general. And
you still don't mention the fact that Morse is better in some ways,
while other modes are better in other ways.

Good luck with the EME system.

Yep. Uhura reads it aloud, and Kirk says he's reading it too.

Some pretty good ones and some real scenery-chewing. Oddly enough,
Shatner's finest Star Trek moment was on Saturday Night Live.

Some of us have ALWAYS built our own equipment. That's why
some of us became "hams" --- so we could test it out.....

Alas, most today are appliance operators. I can't, personally, see any
thrill at all in spending 2K for a rig designed and built by strangers, and
spending a month reading the manual learning how to use it...

Still, there's room in the hobby for all of us.

And, in fact, there's a whole lot of us that have more degrees and
licenses than can fit on a good sized wall.

Enjoy whatever facet of it you choose....

It might be that the ARRL knows what is best for amateur radio.
There's a good chance that Hans knows what is best for amateur radio.
I don't know of a soul who believes that you know what is best for
amateur radio. You aren't involved in any capacity.

The FCC rules giving the option to modify equipment certainly lends
itself to the view that the Commission does not discourage such action.
Your interpretation may differ but it really doesn't matter.

> Now let's look at that phrase "pool of trained radio operators" Dee. The
> vagueness of that can create some issues, such as what type of training???

To clarify any "vagueness" that may exist in some folks' minds ...

******
From the FCC's Report and Order in WT Docket No. 98-143:

(at para. 30)
"We are persuaded that because the amateur service is fundamentally a
technical service,
the emphasis on Morse code proficiency as a licensing requirement does not
comport with
the basis and purpose of the service. We note, moreover, that the design of
modern
communications systems, including personal communication services,
satellite, fiber optic,
and high definition television systems, are based on digital communication
technologies.
We also note that no communication system has been designed in many years
that depends
on hand-keyed telegraphy or the ability to receive messages in Morse code by
ear. In
contrast, modern communication systems are designed to be automated systems.
Given the
changes that have occurred in communications in the last fifty years, we
believe that reducing
the emphasis on telegraphy proficiency as a licensing requirement will allow
the amateur service
to, as it has in the past, attract technically inclined persons,
particularly the youth of our country,
and encourage them to learn and to prepare themselves in the areas where the
United States
needs expertise."

(and at para. 31)
"
We also find unconvincing the argument that telegraphy proficiency is one
way to keep amateur

radio operators ready to be of service in an emergency. In this regard, we
note that most

emergency communication today is performed using either voice, data, or video modes. We

also note that most amateur radio operators who choose to provide emergency communication

do so, according to the amateur radio press, using voice or digital modes of communication, in

part, because information can be exchanged much faster using these other modes of

communication. Further, we note that in traditional emergency services, such as police, fire,

and rescue, there is no requirement that emergency service personnel hold amateur radio licenses

or any other license that requires telegraphy proficiency. We conclude, therefore, that telegraphy

proficiency is not a significant factor in determining an individual's ability to provide or be prepared

to provide emergency communications."

******

So, you can see, in the FCC's own words, in their view, the "trained pool of operators"
thing has essentially nothing to do with Morse, but, rather, with technical and operating
skills in the modes that are PREDOMINANTLY used in comtemporary emergency communications.

> Being able to handle message traffic, would be an extremely important detail
> in training IMHO.

Much message traffic is handled via voice or digital modes ... those that still
pass NTS traffic (or emergency traffic, for that matter) in CW almost invariably
do so as a matter of personal preference, NOT out of necessity.

> How many people can formulate a formal messagegram??
> Even though I am one of those low-life codefree techs, I still can.

So can I ... but I have found that in real-world emergency communications there is little demand for formal radiograms ...

> though not necessarily all at the same time.

For some digital modes, I would leave out the "though not necessarily all at the same time" qualifier.

> OOK Morse will outperform
> all other 'digital' modes now in use in equipment simplicity

So what? Equipment simplicity is a non-starter ... with today's level of integration, with gates so cheap, there is NO logical reason to insist that a 1 transistor TX is "better" than a TX with an IC or several ICs in it ... and the TX is invariably simpler than the RX ... the RX for FSK, for example can be as simple as one for OOK CW (maybe simpler).

> and
> adaptability to human operator encoding and decoding by non-visual
> means.

Again, so what? The "human error factor" is, I am quite sure larger than the probability of a well-coded digital signal being decoded in error ... and many FEC schemes will "flag" a decoding error if the coding can't correct it ...

To me, this goes PURELY to the "I like to do it myself." personal preference for Morse ... I don't deny anyone's right to choose that preference, but I simply don't see it as bolstering some sort of "advantage" for Morse.

> OOK Morse will also outperform some other 'digital' modes in
> various performance measures such as (but not limited to) weak signal
> performance, data throughput, robustness in the face of certain
> channel impairments,

Which ones will it outperform? As has been elaborated, even simple BFSK, at the same information transfer rates, has about a 9 dB weak signal advantage over OOK Morse (technical fact based in the math and physics of modulation theory ...) Additionally, as I have pointed out, at the same data rate as, say a 13-20 wpm Morse signal, a human operator could learn to decode the FSK tone shifts by ear (some have reportedly done it, but I don't have references to examples).

> and operator-detected data errors."

I'll put my money on a good FEC system over a human operator in bad signal conditions any day ... I've seen HF modems that were so robust you could unhook the antenna cable for 20-30 seconds and the system would not drop a single character ... that's how much coding and interleaving was being employed. And, again, with today's level of integration, such a device takes an IC or two ... what's the big deal about that?

> IOW, it all depends on what criteria you use for "better". Morse is
> better for some things, while other 'digital' modes are better for
> other things. Or perhaps we should say that Morse is better in some
> way, while other 'digital' modes are better in other ways.

> face of Gaussian noise. OTOH, it requires a very stable transmitter
> and receiver, and is usually implemented by means of a
> soundcard-equipped PC, greatly increasing equipment power consumption
> and complexity.

Again, I don't buy the arguments about "complexity" ... because of the
low cost of high integration and the inherent reliablilty of such gear.
Power consumption is something that one plans for in one's emergency
preparedness planning ... all of my gear runs from 12VDC and I have
substantial batteries (and the means to charge them for a LONG time
without mains power). I plan to install a propane powered generator
here at the house as well, eventually. With the 1000 gallon propane
tank, and two vehicles as well, I figure I could keep my station batteries,
the notebook computers, etc. charged for months.

> PSK-31 is also susceptible to phase distortion and
> noise, both in the equipment and the transmission channel. (This is
> one reason why it is sometimes possible to 'hear' a PSK-31 signal but
> the decoder cannot decode the received signal).

PSK-31 has some interesting attributes, but, with all due respect to its
inventor, it is certainly not the "be all and end all" of digital
communications.
(nor do I belive the inventor ever intended it to be ...)

> Other 'digital' modes have their own strengths and weaknesses.

You're using "magical" like Disneyworld uses it ... as a way of saying
that something is entertaining, fun, and has its own "draw" for some
people.

I'm talking about "magical" in the sense of "having special powers to
do things beyond the ordinary." There is nothing "magical" about Morse
in that sense.

> You're missing some of the main motivations of most radio amateurs,

>
> You're missing the motivational forest for the reductionist trees,
> Carl.

No, I'm being REALISTIC that there is nothing magical (in the
practical sense) about Morse. (That STILL doesn't mean that
I have any desire to eliminate its use ... I DON'T. I just want
it to be viewed for what it really is ... one mode, whose value
is primarily entertainment/nostalgia and which doesn't deserve
a separate pass/fail test that keeps one from getting an HF license.

[snipped repetitive argments about what constitutes "magic"
and what doesn't]

> system to ever be widely accepted.

I believe that I have a good grasp of what would be required for
an EME system to gain widespread use ... when I spoke of serious
antenna work above, I was talking about the task of installing at
least one (and preferably two) tower(s) and multiple antenna systems
before winter precludes further work (this is going to be hard, based
on my work travel committments, but I'm REALLY going to work
hard on getting at least one tower and associated antennas up.

The call was pretty close ... and I am confident that with the
continuing influx of no-code techs and the large number of
folks who have been able to upgrade without jumping through
the unnecessary 13/20 wpm code "hoop," that the tide has
inevitably swung well in the direction that I advocate.
(But, as I and others have previously said, the decision should
NOT be based on a popularity contest in the community of
incumbents, but should, rather, be based on the sound judgement
of the FCC as to what's regulatorily necessary and good for the
future of ham radio.)

Modern DDS devices would require too many pins on the device for
cheap packages unless they used some sort of serial communications
or a modest pin count multiplexed bus.

I doubt that you will find anything useful with a straight binary or BCD
input because the devices need too many bits loaded into them to set
up all of the internal functions/registers.

That's not my recollection at all but for absolute certain any type of
HF SS would require some bandwidth far in excess of the bandwidths
currently permissable under the regs or acceptable by the users of the
so-called legacy modes on HF. The inherent bandwidth characteristic of
SS has made it destructively non-compatible with the modes currently
in use in HF ham bands. Ain't gonna happen in our lifetimes, ham HF SS
is a non-sequiter.

Your term IF is the Achilles heel of your whole argument. We've been
down this road, i.e., the problem with logical/rational being the
primanry drivers in ham radio. Ham radio is not a commercial service
where logic is the driver. The standard issue ham is into ham radio
for it's recreational value and the rest flows from there.

Then you better find a like-minded programmer who has extensive
real-world actual experience with weak-signal DXing and contesting CW

and otherwise to write the code. You sure as hell are not qualified to
do that.

You're snapping around the edges of needing AI to pull off any such
code. We all know how easy that is (?!). IBM has a well-funded crew of
their comp sci & math geniuses and a mainfarme dedicated to
periodically trying to beat one human chess player's brain. And chess
is just a two-dimensional board game with rigid rules of play which
allows large chunks of time to make the decisions on each move. HF CW
contesting in particular has more dimensions than I can even start to
count and decsions are routinely made several times a second. Just for
openers. How ya gonna do it Carl? A bit of C++ and VB in a ham shack
PC? Yeah, right. Not even a decent pipe dream.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of July 15, 2003:

Novice - 33,662 (decrease of 15,667)
Technician - 257,319 (increase of 51,925)
Technician Plus - 67,055 (decrease of 61,805)
General - 141,181 (increase of 28,605)
Advanced - 83,239 (decrease of 16,590)
Extra - 104,301 (increase of 25,551)
Total - 686,861 (increase of 12,069)

Where? You are mistaken. AC6XG hasn't posted here in quite some time,
and I've never seen him refer to himself that way.

> Is Kelley against Morse/CW use?

Nope. I've worked AC6XG at least twice, both times on CW. Once was on
Field Day (20 CW) and the other on the rrap net on 7037 kHz.

Copernicus still thought the earth was the center of the universe and he came up with an elaborate mathematical system to explain the apparent motion of the planets in the sky including the "retrograde" motion.

It was Galileo who showed that the earth was not the center when he spotted the moons of Jupiter and determined that they orbited that body and not the Earth.

Right. I am looking for something that might best be implemented as
an ASIC somewhere, in that it would be a special-purpose sine wave
synthesizer rather than a general purpose DDS device.

The FCC is not all that qualified to judge what is good for the future of ham radio. Many of the staff are not involved in ham radio. They are a government body whose purpose is to regulate the various radio services so that they can coexist. There purpose is not to maintain ham radio or decide what is good for it.

Arnie, if you're going to offer this kind of "public service" you might want to update it once in a while.

Brian,

I've updated my site twice a day for every day of the storm since it was a tropical depression. I decided to post it to this group because the storm was within the 24hr strike zone and the path error was down to about 30%. At that point, no great change in predicted direction or speed was going to take place. If you took the time to look at the date and time of my post and the date and time of the advisory, you would have noticed that it was issued at 5 am EDT and I posted it 30 minutes later. (I'd say that's pretty timely) The NHC only updates the storm about every seven hours, and even though I can download the data directly from the NHC computers at any time, they *only* update the map data and advisories that are *new*. That would have been around 11 AM (when I was at work) -- The storm hit land within that time period, then quickly returned to Tropical Storm status and the NHC advisories ended. At that point there wasn't a need to update it further. When the next tropical depression forms and is threatening to develop into a Tropical Storm, come back to my site and you will see these regular updates for the map and advisories about twice a day.

Gee ... I have no idea how you have the faintest clue (hint: you don't)
about my ability to write code ...

> You're snapping around the edges of needing AI to pull off any such
> code.

Horsepuckey ... no "AI" needed ... just a mix of conventional
control code and DSP ... (things I've done in the course of my career)

>We all know how easy that is (?!). IBM has a well-funded crew of

> contesting in particular has more dimensions than I can even start to
> count and decsions are routinely made several times a second.

I wasn't talking about automating contest operation ... simply allowing
programmable channel impariments at the receive end to make "reception"
as difficult as one wants, despite the fact that the underlying
communications
system is very reliable and robust.

> Just for
> openers. How ya gonna do it Carl? A bit of C++ and VB in a ham shack
> PC? Yeah, right. Not even a decent pipe dream.

Actually, one of my 2.6GHz P4s with 512 MB of RAM can do some
fairly respectable signal processing ... and many sound cards have DSP
capabilities ... though at the time the strawman was proposed, PCs were
much slower and sound cards were less sophisticated, so I was contemplating
a dedicated DSP chip for the heavier signal processing.

>

> > > There's a loud statement about ham SS.
> >
> > IMHO, TAPR's SS effort was doomed from the start by being overly
> > complex.
>
> You're pretty good at that yourself.

Actually, I was principal architect of a real, working, commercially
mass-produced
FHSS system ... conceived of, simulated, designed (and have several patents
on)
the modem. ADAPTIVE FHSS, with Reed-Solomon FEC with interleaving across
codewords (not that I really think you know what THAT means, but some will),
and
a number of other interesting features ... the WHOLE thing was much simpler
than the
TAPR FHSS project, and the total BOM (Bill of Materials) for TWO complete
transceivers was such that the two transceiver system could RETAIL for
$49.95 ...
I have one at home ... and I have a radio module from the prototypes as
another
souvenier ...

About 4k total growth per year ...

Still slower growth than desirable by a long shot ... eliminating Morse
testing will help, but more needs to be done to promote ham radio
to those <40-50 years old if we want long-term survival ... I'll be
53 in October and I'm in the youngest quartile as far as I can estimate.

> ham radio.

The FCC is the expert agency on radiocommuncations matters.

> Many of the staff are not involved in ham radio.

Many of the staff, including at least some of those in WTB who
administer Part 97, are long-time Extras (some even operate Morse
as their primary, preferred mode ... but they seem to be smart enough
to realize that jamming it down everyone's throats isn't good for the future
of ham radio)

> They are a
> government body whose purpose is to regulate the various radio services so
> that they can coexist.

That is a simple statement of fact.

> There purpose is not to maintain ham radio or decide what is good for it.

"There" (try "their") purpose is to administer ham radio in accordance with
some fundmental principles about what the basis and purpose of the amateur
radio service exists for ... see Part 97.1 of the FCC's rules and Article 25
(newly revised, effective July 05, 2003) of the ITU Radio Regulations.

One interesting thing about that case is what we don't know. For example, we don't know hold old Swift is, or whether the rescue agencies were fooled or not, whether he suffers from some sort of problem besides ignorance of the rules, lack of common sense and extreme stupidity.

Would be good to know the whole story. Usually there's more to these things than is apparent at first. Take the case of the ham who called for help on a police freq with his modded HT and wound up surrendering the thing. It was demonstrated that he could have hit at least two repeaters and dialed 911 via autopatch from the site where he called the police on *their* frequency.

As to your last sentence, John, you would be right only in discounting certain individuals in here.

This thread got started by one who is obsessed with throwing any kind of garbage at myself for the slightest reason...or as manufactured garbage through the use of inference, misdirection, or outright malicious quoting out of context.

As one who has been IN the aerospace industry and actually worked ON spaceflight hardware (including man-rated), I'm in the category of ardent fans of the overall effort and certain honor the men and women who have been chosen as astronauts...and cosmonauts.

A problem with the ordinary public is that they consider space flight "safe," just like a long plane ride. It is most definitely NOT so. Every single manned flight is a high-risk activity. That it has appeared safe for many successful flights is due largely to thousands of non-astronauts who did the engineering, design, fabrication of the vehicles and payloads. The public is largely ignorant of them...at best only knowing the ones around consoles at the MSFC Mission Control room.

Still, each and every space flight is not without risk today. The tragedy of Columbia proved that very unfortunately. Back when Grissom, White, and Chaffee lost their lives in a ground capsule test fire for Apollo, I was working on unmanned space flight payloads...every single one of us in the clean room were saddened on hearing of the event. At that same facility earlier, some of us saw the unedited film of the Gemini-Agena docking flight, the one where a stuck-open manuevering thruster caused a high-rate double degree of freedom rolling. Command pilot Neil Armstrong managed to shut it down, but not before the roll rate had gotten very severe. Armstrong and David Scott could have perished on that flight but managed to manuever just enough to splashdown in the Pacific well away from the intended landing site.

Five astronauts and one cosmonaut (Yuri Gagarin) died in aircraft flights. "Ordinary" air flight is supposed to be safe...but it is not without
risk. Of the seven who died in Challenger (STS-51J), few know the names of the major crew. Judith Resnick is honored by the IEEE (she was a member) by having her name on an award. It was to be Judy's second mission in space...also commander Scobee and specialist Onizuka. Challenger never reached outer space, exploding a mere 73 seconds after lift-off.

Before you get involved in castigating someone, consider carefully who started this thread and the manner in which it was written. Like tens of thousands of others, I honor ALL the names of men and women who have gone in space...even those who have joined the space endeavor knowing full well what their risks are.

Leonard H. Anderson
retired (from regular hours) electronic engineer person

Heh heh heh, lots of whine from sour grapes amongst the morsemen.

While (fortunately) Sarah Michelle Gellar (who played the part of
"Buffy") is still with us, so is (unfortunately) test element 1. :-)

On itself, your statement implies that "everything" is known or that one
must study "everything" in order to be prepared. That's rather
impossible for any human to do in one lifetime. :-)

The phrase "adapt, improvise" comes to mind...as sometimes used by
one of the smaller US military branches. Considering just radio and
electronics and its continuing state of the art advance, it is better to be
prepared to adapt and improvise (one's learning process). Continual
rehashing of the old standards is not the wonder that some folks think
it is.

By example, those who have gone the full route of education, career, etc., have more insight into the whole process and "what was required" than those who have not finished.

The easy way out is to simply accept what the academics insist one should study and learn. Noble enough, but consider that academics (for all their high-brow intellectual whatsits) have their own SYA agenda and need to to remain employed or to have income. A continual supply of students is their source of income. <shrug>

That's universal in capitalist democracies. But it's better than "the
other" system which proved to be mother of all socioeconomic duds of
the prior millenium.

There is a BSME/MBA I know extremely well who rose to the top of a
local technology-based quarter-billion dollar manufacturing
enterprise. He ran into a nasty show-stopping product design problem
which involved the need for far-end analytical work to resolve. He
groused to me about it. Sayeth me; "I toldja 'way back to get yer
PhD!" To which his response was, "Ah phooey, any time I want a PhD
I'll go out and buy one." Which is exactly what he did. That's our
fate and we done it to ourselves.

I'm not a product of a traditional four year U.S. engineering school either so I'm not much better off than you are when it comes to comparing U.K apples to U.S. oranges, it's a mess. I trudged thru what is called a five-year "cooperative education" undergrad mech eng program. It's quite different from the four year schools' approach, entrance requirements are similar but just about everything else is different.

The classroom & lab side of the program consists of twelve 11 week "terms" at a rate of four terms per year vs. semesters. Ten weeks in class plus "exam week". The Freshman year is spent taking three terms straight in class. Beyond the third term students serve two terms in class then two terms out in industry per year on a rotating basis for four years. The six-month "industry periods" are served working for firms which are cooperating with the school by providing paid engineering apprenticeships supervised by both the school and the firms. In some instances government agencies are the employers.

By the time they drop your dipolma on you you've spent five years at it but already have two years experience in whatever your field happens to be. Once you're in you're in for five straight, no summers at the beach working as a lifeguard BS. One of my brothers went thru the ME program with me and we both came out with all our bills paid without tapping our parents and with money in the bank. I doubt that this is possible today but it's still better than not earning income by working in your field as a student.

Credits are granted by the classroom hour and half credits are granted for lab hours. 212 credits were required to graduate, I assume that's still the case. Plus grades and averages were strictly by the numbers, an 83 in a course was better than an 82, no such things as As, Bs and Cs. 65 was the flunk point. All of which was/is completely incompatible with the way the traditional schools pass out credits and grades. Made transferring credits to and from other schools a *major* pain except in the cases of similar schools like MIT and Cincinatti Tech.

Course work was all over the map. Two or three mandatory terms (it's been awhile . . !) of English were the only classroom humanities we took but there were piles of humanities electives available. Two terms of modern economics plus one of engineering economics were also mandatory. There were a couple other nontechnical "mandatories" but I've lost track.

One cute hook they inserted into the program was the "industry reading courses". Mandatory humanities reading assignments completed while out in the work force and were tested immediately upon return to class terms. Normally involved 4-5 arcane tomes per term. History, lit, psychology, anthropology, philosophy, etc. For which the student got zero academic credit. None. Zip. Nada.

Class and "lab" work included mandatory military training (U.S. Army Corps of Engineers ROTC) for two years and voluntary training for the

remaining three years. Completion of all five years of military training resulted in a commission as a reserve or regular military officer.

The technical courses were taught by a number of departments beyond the mech eng people. Heavy doses of chemistry by the chem dept, even heavier doses of physics by the physics dept thru Nukes 101, materials science by the metalurgy dept, math out our ears of course via the math dept, the early courses in applied mechanics from the civil engineers, EE 101 & 102 from the EE dept. and on and on. From the beginning thru around the seventh term all technical courses with some minor variations were the same. With the exception of the biology majors . One could hop from EE to ME to chem eng at will. From seventh or so your department took over your mind and body and the rest is probably very similar to your path.

The place was no fun at all. Gaining admittance was quite competitive to begin with and when it was all done almost 70% of the Freshman class had either flunked out or bagged it by the time graduation rolled out. Parris Island North for five years, the largest private engineering college on the planet. 85 MEs and something like 90 EEs came out of my class of '63.

Sure you can, whether they want it or not. To paraphrase the Dean of the School of Engineering (a graduate of that school and a top-notch guy whom I came to know and respect in the years that I was there - may he rest in peace) at our orientation: "If you want a degree from this instituition (one of the top three engineering schools in the country) you will have to take the all courses that we give when we give them. If you want to have "free choice" and take or don't take only what you want or when you want it, you can go to Basket-Weaving University and let someone who wants to be here take your place." (Admissions were 100 per year out of a field of 2000 qualified applicants per year.)

What? I've never heard that. Folks should know how their radios
work, that's why the FCC exam includes "theory". There's never been
a requirement to bring in a Home Brew transceiver as part of the
exam.

I've been licensed for 35 years and I've only met one person who
built an SSB transceiver from scratch. I know lots of folk who
have the expertise to repair them and many have built kits.

Yeah, you know I just took a quick scan of the HF spectrum. Looks like most of the modern world has relinquished HF spectrum for more consistant, secure means of long range communications.
There's a few spanish speaking mariners off the coast of Chile on 8MHz, but they're waiting for some surplus AMPS cell service to show up. The same drunks on 75 every night bitching and moaning about not getting laid, 2 guys a day die at the mic on 40 trying to spark a nail while explaining their med
regiment, 20's got would-be broadcast engineers schmoozing us with swideband audio, effectively demonstrating how to make inefficient use of spectrum as the DX'ers yelling numbers across the pond. From there up to through 10 its kinda dead...except 27MHz. There's always an elevated noise floor and some potent SKIP signals on 27MHz.
Both amateur bands on either side can be dead quiet while half the iron EF Johnson ever made is pumping square waves on Channel 6. I really shouldn't mention 27MHz though because thats, well thats CB.
Its probably a result of that band selective propagation problem I noted earlier.
I really hate to be the devils advocate, and I have have enjoyed the romance with ham radio that many others from years gone by have experienced, but we may soon be exposed to the same hassle the 8-track got when cassettes showed up on the front seats of our Chevelles.
Unfortunately, the FCC has been reduced to auctioneers, directly accountable to scuzbucket politicians eager to sell off anything possible to maintain the facade.
The lucky ones leave the FCC to assume cushy positions at corporations they help during thier tenure, quite blatantly I might add. Hell, some have left to start
companies that intentionally try to destroy industries(LMR/SMR) to achieve thier means(certain cell carrier with push to talk feature)
I'm probably gonna send Newington money anyway. They irritate sometimes, but they're the biggest gun we have. I'd really miss the natural sound of an HF
radio set, and the character and tradition of our HF presense. How 'bout you?
My argument is that BPL should be high pass filtered with a 30MHz cut-off. When the leakage of data begins to propagate erratically in the lower
HF region, there may be fragmented co-node interference that may be a duplicate color code match, causing network disruptions.
Another more basic issue is, Commonwealth Edison can't keep thier 60Hz primary product from leaking. How the hell are they going to handle a sub

carrier service on ratty grids maintained by employees that think the power
is
good because your lights are on?
And finally, the sacrifice of the lower 28MHz (2-30) that is alleged to be
affected
will not drastically affect the massive volume of throughput that will be
crammed
down the throats of so many, or the massive volume of cashflow that will be
enjoyed by so few.

How do you manage to be wrong so often, Brian? I worked about forty Europeans on 6m this past week. About half of those QSOs were made on CW. About half of the CW QSOs were made using relatively slow speeds. Those contacts were not made using Aurora. Had they been, all of the QSOs would have been made using slow CW.

So far, the only people here claiming that "it" (whatever "it" is) all about using fast CW on Hf are you and Len. Len isn't a ham. What's your excuse?

The above didn't come out as to what I intended. My intent
was that there is a burden on the non-phone users
to use the non-phone segments. IF phone users can
show the FCC that the non-phone segments are
underutilized, then the non-phone users could lose bandwidth.

>Still slower growth than desirable by a long shot ...

I'd like to get some of my friends licensed and use it for utility purposes. Other than that, what does it matter about ARS license numbers?

>eliminating Morse testing will help

No, it won't. The entry-level license is already code free. Eliminating Morse testing will not cause more people to want to join.

Some do join just for HF, but that won't affect ARS license numbers.

> but more needs to be done to promote ham radio
>to those <40-50 years old if we want long-term survival .

I hate to say this, but vanity helps. Better to appeal to selfish motives than selfless motives. The emergency communicator, the public service aspect - What young person wants that?

Morse code and contesting don't appeal to vanity.

Morse code may be fun, but it takes more than that. If that fun makes you the object of ridicule, then its not worth it. That makes it a "guilty pleasure" -something you keep to yourself.

When they call contesting competition, it offends the normal sensibilities. Making short QSOs (oops, I used a codeword) and counting contacts. Contesting is competitive in a way, but its just one way. To exclude several kinds of competition for contesting just isn't right. It means that competition isn't the real motive. That's just a rationalization.

Real competition is expanding one's limitations. It includes radio direction finding, APRS, mobile operation, tuning, troubleshooting, real emergency preparedness.

And don't forget the social aspect.

Contesting is really boring too. It's human nature not to like boring activities.

Some Hams will take a day off for a Hamfest that is on Friday and Saturday. That takes one day away that could be used for a real vacation day. Just go Saturday - you won't miss anything. Also, lets not schedule Hamfests and other Ham Radio events during people's free social time, as Hams often do.

If you make the social aspect intolerable, some young people will not join for that.

The original reason for requiring CW/Morse proficiency of amateur operators was to ensure that they would be able to read signals directed at their station by government stations who came up on the amateur's frequency to tell them to leave the air because they were interfering with the governemnt (usually Navy) communications - WW-I era stuff.

Everything else was superfluous - the need for "trained operators" for CW/Morse circuits went away after WW-II. Civil aviation CW went away right after that war, too. Marine CW persisted another 60 years or so, but amateur radio operators were never trained nor recruited to be the "reserve force" for the merchant marine'd Radio Officers.

The only others who need Morse qualification at present are military intelligence intercept operators and their civilian counterparts in the FCC and certain other spook agencies - and those service techs who want to be able to read and understand what their clients' Morse IDers are saying when they go haywire.

We hams may be the "keeper of the flame" because we want to do it, but there is no need to require it.

for ham radio or any other service.

Again, bottom line...FCC does the deciding.

They are the expert agency on regulating the radiocommunications matters.
It is not their function to be an expert on what is good for a service.
They accept input from all radio services and balance them. Afterall what
is good for say commericial radio might be detrimental towards ham radio and
vice versa.

>

Their reasons for wanting to drop it may have nothing to do with the good of
the future of ham radio. While they have stated that they see no reason to
keep it, they did not say that dropping it would be good for ham radio.

That is true Dee, if even half of the licensees out there operated a little
more often, the bands would be busier. HF seems to be holding it's own for
the most part as far as usage. 2 meter and somewhat in the 70cm bands usage

is fair but could be better. 6 meters is considered a "throw-away" band, as people seem to think it is only good during a band opening. I personally have had some excellent local, or better put "within state" contacts when the band otherwise appeared dead.
220Mhz, 902Mhz, and 1.2Ghz bands are desolate, at least around here. I wouldn't be surprised if we lost the 220 and 902 bands.

That's the only time available to schedule. You can't schedule during work
time or not enough people will be able to come.

Not true. Many NCT's joined up for the public service aspect of the
service.

You just don't get it, do you?

Kelley, w/o a dream, where you gonna go??? SOS, different day, that's
where! And you're happy with that slop? Obviously.

I used to start digital image processing with Landsat multispectral
images, using a microvax minicomputer, go to lunch or go home, and
hope it finished when I got back to work. Todays desktops are at
least that good.

But you wouldn't know because you're trying to rest on your
rubber-band technology glory days same as most of the beepists of your
era. Pfft.

Quite true, and even if the amateur radio public unanimously collectively chipped in 100 bucks a piece in defense of this threat, I am sure it still would be DWARFED by the corporate threat of the companies getting involved in this technology. Money talks, and you-know-what walks.

Perhaps, but I would think the dispatchers would have to know it as well.
Based on the tone of the response I take it as you feel that morse does not
have as much value as stated by others here in the past. If morse is so
important, than radio "services" should have to know it as well, otherwise
the arguments "for code" fall apart in my opinion.
"Radio service" personell are required to learn other skills, in order to
perform their positions, and hams are required to learn other skills along
with morse code.

That is true, but it is only an alarm of sorts. It does not allow for intermittent keying last I knew. A downed cop or firefighter could key a location such as "bedroom" or " bathroom" or whatever.

There is AVL as well, but that usually is for the mobile radios. Kinda-sorta-maybe like APRS.

Jim:

Don't I wish it was Phospo-Soda! I had something called "Lo-So Prep" this time, and it was awful! Made Fleet's seem like a Diet Sprite by comparison! I'm an old hand at the colonoscopy procedure, having had polyps removed in '86. It's a lot better these days -- the instrument is flexible, and they sedate you before the procedure. I was "lights out" and just woke up about a half-hour later with the whole experience "behind" me, as it were!

>But seriously, hope it goes well and you check OK.

Brian:

Thanks for the kind words. It did go well. I had an Endoscopy and
a Colonoscopy at the same time, so they got me from both ends! I
don't have the results yet, but the examination was routine, as opposed
to being driven by a specific problem -- at least as far as the Colonoscopy
was concerned. The Endoscopy was to diaganose the cause of my
GERD -- or GastroEsophageal Reflux Disease. I've been on Prilosec(R)
for about 6 years now, and just thought it was about time they took a
look under the hood to see if the problem can be fixed, rather than just
having me throw expensive prescription drugs at it for the rest of my
life.

Brian:

Some of the busiest people I know are allegedly "retired." I have no doubt that you will still be able to provide yourself with a surfeit of excuses, even then.

I became a code-proficient amateur radio operator and upgraded in far less than the "normal" amount of time during a period of my life when I was the busiest I'd ever been. The "no time" excuse is just that -- an excuse. There are thousands of hams who were able to work it in, just like I did, with no problem.

You get a second shot at the question -- try to come up with something both original and believable this time.

>Personal experience with colleagues and other anecdotal evidence.

Well, Carl, I know from "personal experience with colleagues and other
anecdotal evidence" that the code test imparts useful communications
skills and tends to encourage the pursuit of greater technical knowledge.
So -- which one of us is wrong, here?

>The way that you, Dick, and *some* others look down your noses
>at folks who aren't interested in code and object to unnecessary
>"hurdles" sure doesn't help to bring new folks into ham radio either.

The only ones I'm "looking down my nose" at are the typical whiners
and complainers -- the ones making the specious comparisons between
code testing/proficiency and technical nescience. Any newcomers to
amateur radio who are open-minded about code proficiency, and are
willing to give it at least as much effort as would have been exerted
under the former licensing requirements would have nothing but my
approval and encouragement. And those who want to do everything
but the code are still OK with me, as long as they stay as far away
from that topic as possible -- because they're not qualified to discuss
it or have an opinion. Should they tread on that topic, they will find
themselves confronted with someone with vast first-hand experience,
and the ability to articulately defend his viewpoints with passion and
conviction. It is in such a debate that the no-coders usually break down
into emotionalism, name-calling, and playing the "victim card." If
I were them, I'd just stay as far away from the subject as possible, and
I will not pursue them.

>test to get the privs they REALLY wanted, never to use Morse again.

Carl:

That's right. They did. And a lot of them kept the key on the top of the
operating table and continued to use it. Now, in the absence of a code
testing requirement as part of the licensing procedure, how many new hams
will even bother to own a telegraph key?

> >You don't believe in the requirement, so

>involved in VHF/UHF repeaters, packet, etc. I lost interest and never went
>back to Morse.

Well, it was getting on VHF/UHF repeaters that actually spurred my interest
in CW, since the hams I talked to were always talking about their adventures
on HF, particularly in the CW mode, and I enjoyed being able to join in on
the conversation, telling them about the "new one" I had just worked.

>Could *I* become proficient at 20 wpm ... certainly, with enough use and
>practice. Do I *care* to? The answer is obviously "No."

Well, at least you were exposed to the code and learned it well enough to
make that choice from a vantage point of actual personal experience. In the
future, a lot of hams who may have decided to become active CW users will
no longer get that opportunity, due to the elimination of the code testing

requirement.

>There is essentially nothing that could make me interested in becoming "a
>regular CW operator with 20 wpm proficiency."
>
>Does this make me a "lesser/2nd class ham?"

Since you tried it and gave it a fair evaluation, I'd have to say that it does not. Again, future hams will not have had your experience. That is the difference. Not having "been there, done that" disqualifies them from making any judgment on the "code" issue whatsoever.

>I certainly don't believe
>so, Larry, any more than I believe that the fact that I have every reason
>to believe that I am more technically competent than you makes me
>"superior in all respects" to you.

I have never denied the "superior" technical competence of you or any other ham who has it. There is nothing I enjoy more than being around hams who really know what they are doing, technically, and can impart some of that knowledge to myself and others. However, in my own experience, some of the most technically competent hams I've known have also been proficient CW operators. I cannot say the same for the "no-coders" I've known, with few notable exceptions.

>You, however, believe that your Morse
>ability makes you "superior to all no-code hams." (You've said that over
>and over here, along with all sorts of disparaging remarks about no-code
>hams.)

It does give me "superior" operational capability, and I won't mince any words about that. Moreover, my code proficiency had a direct impact on my gaining increased technical knowledge, although I'd never classify that as anything other than "amateur" level.

>Why don't you try treating hams who have gotten their licenses (or upgraded)
>under the new rules with the same respect that you'd like to be treated
>with?
>(I promise you, it won't kill you. :-)

I can, and I do -- as long as they don't make a point of whining that the (former) code testing requirement was causing technical ignorance within the ARS -- as has been their traditional claim. It just isn't so.

Lies! All Damned Lies! That lowlife SOB. If I ever get my Hands...

> I thought his attempts to embellish his Army "career" record by
> assosciating himself with Soldiers who died 3 years before he was even
> sworn in was disgusting.

Some Army units have a history. Patch on the left arm, patch on the
right arm stuff. You just wouldn't understand being a CAP Bigshot and
all. Go talk to Kelley, he's got real military experience and all
that. He'll get you turned around in a hurry.

> Lennie puts the "scum" in scumbag, that's for sure.

Scum of the worst kind. Lying and all that about the Shuttle
tradgedies.

Jeez Us H !!!

So anyway, Steve, where is NASA hiding the atronauts? I mean, you
said that awful SOB Len was lying about it, right? They're on
Ascension Island handing out 40,000+ United Nations QSOs on Raytheon
HF gear or what? Right?

Riiight?

RIIIIGHT???

Steve, get a grip. Go seek counseling. I don't know how to say this, so I'll just say it straight up. There really was another space shuttle tradgedy. Len wasn't lying. Do a search on the New York Times or something. The truth will set you free.

73, Brian

(Len, sorry to defame you in the above "Tuff Love" series. It was beyond necessary - he needs more help than I can provide, but I tried.)

I disagree based on statements made by others here before. Having both HF
and VHF+ access to all of the amateur radio spectrum (i.e. upgrading all the
way to extra) is so important to some, then the parallel is there. Not
exercising the full advantages of the license.

I have had 2 CSCE's now for the morse code test, and let both of them slip
as I see no need exercise the use of those privileges, nor can I at this
point due to operational limitations. But apparently upgrades are even more
important to some here more than god.

Perhaps Len should just go work some out of band Frenchmen and be done with it!

Then he would have a claim to validity (and greatness)!!!

By the way, Dave, was that SSB or CW?

Sheesh! 1 GHz with a 10 bit binary counter. Only $350.00 each in quantities of 1000. Someone care to loan me over 1/3 of a million? Seriously, however, there are affordable AMD devices but they appear to be in the 50 MHz to under 200 MHz range.

There's always a helluva wrangle over most every aspect of
HF at each and every WARC, gotta be some serious interest there somewhere.

>
> My argument is that BPL should be high pass filtered with a 30MHz
> cut-off.

There are a number of public safety agencies who still make serious use of lowband
VHF below 50 mHz, all the trunked systems nothwithstanding. Converting those to
UHF or up is a big $$$$$ proposition which just aint gonna happen iin the financial
climate facing those users for the forseeable future
. The state I worked a career for that uses a series of frequencies in the 42mhz
region for statewide public safety comms
would love to abandon it all in favor of a trunked UHF or above system but can't find
the ~$250mil it'd take to do the job. I'd expect that state and several others that
I know are on low VHF to have some pretty strong language for the FCC on the BPL
issue.

> When the leakage of data begins to propagate erratically in the

If FCC wants a real hornets nest to descend on DC they can assure it by approving
the
BPL docket without many very serious limits, big chunks of frequency exemptions and
much other machinations to releive in advance a huge amount of what will be real

trouble for them if they don't. And no one knows if it would even work acceptably then, much less if there will ever be a viable business plan stem from it all. Who knows what emerging technology will render the whole scheme obsolete sometime next week?

Subject: RACES Assistance with MSP Manhunt

15 July 2003

NEWS STORY.....MICHIGAN RADIO AMATEURS ASSIST IN CRIMINAL INVESTIGATION AND MANHUNT.

On July 6, a Michigan radio amateur by the name of Scott Woodring (KC8JNG) shot and killed a Michigan State Police Officer during a routine arrest on a warrant for solicitation of a minor, resulting in a tense standoff with law enforcement. Mr. Woodring was a member of the Christian Identity movement, an organization that promotes racist and antisemetic views along with an anti-government agenda.

On Monday, July 7, after a standoff that had continued from the previous day, Mr. Woodring escaped during a law enforcement shift change, resulting in a nearly week-long manhunt for the suspect throughout Western Michigan.

Shortly after the escape of Mr. Woodring, James Wades (WB8SIW), the Michigan Section Emergency Coordinator / State RACES Officer requested that the Newaygo County Emergency Coordinator establish an intercept operation in the area of Fremont to identify any possible transmissions from the suspect. This request was based on the fact that Mr. Woodring had utilized Amateur Radio frequencies and equipment to communicate with fellow members of the Christian Identity movement. Mr. Woodring was also known to have recruited a number of like-minded individuals into the Amateur Radio Service and may have purchased two-meter FM transceivers for use by fellow members of his organization.

Operators were asked to monitor seldom used frequencies both within and adjacent to the VHF Amateur Radio allocations. An additional announcement was broadcast to Emergency Coordinators and selected RACES personnel throughout Michigan requesting information on any transmission heard from Mr. Woodring.

On Friday, July 11 at 5:18 PM, Mr. Bill Hubbard (WD8MKG) of Holton, Michigan
reported an intercept of communications between Mr. Woodring and another radio amateur located in Fremont, Michigan. This was promptly reported to the SEC shortly thereafter. This information was transmitted verbally to Michigan State Police Operations Desk at 5:39 PM. A follow-up facsimile was
transmitted to MSP Operations from the West Branch MSP Post at approximately
6:20 PM.

MSP Investigators subsequently requested assistance from the Department of Defense and Federal Communications Commission in order to establish radio direction finding capabilities. When help was not forthcoming, a call was placed to the SEC requesting these capabilities through the Amateur Radio Service.

A radio direction finding team was dispatched from Kent County RACES, arriving at the MSP command post shortly thereafter. This team was placed under the supervision of the District 6 Emergency Coordinator, Mr. Tom Vandermel (KB8VEE). Subsequent assistance was obtained from RACES members in Ottawa and Muskegon Counties.

In addition to those resources in the immediate area, a team from Kalamazoo County RACES was placed on standby along with a Civil Air Patrol team from the Mt. Clemens area. These later teams were not utilized due to the distances involved and the fact that adequate staff was available in nearby Counties.

The radio direction finding activities continued until approximately 5 AM on
Sunday, July 13 when Mr. Woodring was located based on a tip from a local resident. He was subsequently shot to death when he leveled an assault rifle at officers and refused to comply with directives.

RACES members provided 494 staff-hours to the operation, most of which were contributed during the 36-hour period when radio direction finding activites
were being conducted. Michigan State Police officials expressed genuine appreciation for the efforts of the Amateur Radio teams. Considerable positive feedback has been received from a variety of senior officers who now have an "expanded" view of Amateur Radio capabilities.

In fact, it could well be that FCC nowdays may be, or may become, more interested
in seeing the ARS decline, with corresponding decline in amateur radio interest
in the HF part of the spectrum.

The simple reality of the matter is that most of us coders could care
less about what happens above the .100s and it's been that way for
decades. The crunch could come if the HF digitals continue to pick up
users. They have us below them and the phone ops above them. Any
domestic battles over phone bandwidth expansion could very well be
between the digitals and the phone users with the coders as
essentially uninvolved (and snickering) spectators.

I would not want to be in the position of trying to convince the FCC
that phone expansion is justifiable when a move like that would
primarily result in compression of the space used by the digitals.
Given the FCC's thrust to "foster modern spectrum efficient
technolgies" and all that.

The other factor in play here is the glacial rate at which the FCC has expanded the phone bands in the past. In other words doan hold yer breath . .

>
> Carl - wk3c

Carl,

I'm going to do something that you some might not expect me to do, agree. I think that in the frenzy to defend CW testing, some have tried many different angles. Not that these angles aren't correct wrt CW itself, just not the retention of CW testing. This is where the use of the FCC to defend the dropping of CW testing becomes almost silly...because to be quite honest, the FCC really doesn't care all that much about the ARS anyway and ANYTHING that'll ease the administration over the same is more than welcome. So saying "we don't have to do our homework because daddy says so" doesn't mean that the homework is unimportant, it means that daddy doesn't care.

Sadly, many have lost sight of what this was really all about. Element 1 (Domestically, that is.) Rather than investing some time and effort to satisfy a very basic requirement that is an extremely important part of AR tradition, many chose to cry to daddy that their homework was too hard and presented a "barrier" to their pursuits. Daddy will be more than happy to oblige, for now he won't have to check the homework. So let the rejoicing begin, but to a newcomer who came into the fray unbiased...it appears to be one big celebration of underachievement.

Why?
>
> > OOK Morse will outperform
> > all other 'digital' modes now in use in equipment simplicity
>
> So what? Equipment simplicity is a non-starter ...

Not true. Remember that most hams are not electronics professionals
nor do they have lots of resources.

One of the things that used to be a big draw for newcomers was the
"build this radio and listen to the world" sort of project. Still is,
for some. But as the level of complextiy grows, the number of people
who will tackle a project drops rapidly. Particularly as a first or
second project.

How many HF amateur transceivers have you designed, built, and
operated yourself on your own time, Carl? I've done at least three.

And as for repair or modification - the term "mod" has come to mean
"which diode or wire do I snip?" as in that case out in CA.

> with today's
> level of integration, with gates so cheap, there is NO logical
> reason to insist that a 1 transistor TX is "better" than a TX with
> an IC or several ICs in it ...

Nobody is saying that. Just that a CW/Morse station can be much
simpler.

> and the TX is invariably simpler than
> the RX ... the RX for FSK, for example can be as simple as
> one for OOK CW (maybe simpler).

That's just OOK vs. FSK.

> > and
> > adaptability to human operator encoding and decoding by non-visual
> > means.
>
> Again, so what?

Simplicity, enjoyment, and the fact that a person takes their skills
with them wherever they go.

Why learn to play a musical instrument?

> The "human error factor" is, I am quite sure
> larger than the probability of a well-coded digital signal being
> decoded in error ... and many FEC schemes will "flag" a
> decoding error if the coding can't correct it ...

The problem is that all forms of error correction add to the
complexity of a system, and decrease the throughput. Tradeoffs.

> To me, this goes PURELY to the "I like to do it myself." personal
> preference for Morse ... I don't deny anyone's right to choose that
> preference, but I simply don't see it as bolstering some sort of
> "advantage" for Morse.

You're missing a central point of why people become hams and enjoy
amateur radio. Unlike most other radio services, amateur radio is
about radio as an end in itself - radio for its own sake. Direct
experience. To other services, radio is just a means to an end, not
the end in itself. TV folks don't care how their programs are
delivered - cable, satellite, broadcast, wideband - as long as the
audience watches and buys the sponsor's products.

Remember when communications satellites and terrestrial microwave were
all the rage for telephone trunk lines? Now the state of the art is
optical fiber.
>
> > OOK Morse will also outperform some other 'digital' modes in
> > various performance measures such as (but not limited to) weak signal
> > performance, data throughput, robustness in the face of certain
> > channel impairments,
>
> Which ones will it outperform?

Depends on the measure used.

For example, consider 850 shift FSK Baudot RTTY at 60 wpm. Uses a
wider channel than OOK Morse, requires more transmitter power and has
no more error correction than Morse.

Or consider PSK-31 and its susceptibility to phase distortion.

> As has been elaborated, even simple
> BFSK, at the same information transfer rates, has about a 9 dB weak
> signal advantage over OOK Morse (technical fact based in the math
> and physics of modulation theory ...)

That depends on a bunch of factors. For example, what transmitter
power is used? A BFSK transmitter sending, say, 850 shift Baudot has a
100% duty cycle. A Morse transmitter requires at most 40%.

> Additionally, as I have pointed
> out, at the same data rate as, say a 13-20 wpm Morse signal, a human
> operator could learn to decode the FSK tone shifts by ear (some have
> reportedly done it, but I don't have references to examples).

I learned to recognize certain patterns of RTTY when I was at
W3ABT/N3KZ.
>
> > and operator-detected data errors."
>

> and the system would not drop a single character ... that's how much
> coding and interleaving was being employed.

Sure - and that redundancy has a price in overhead and complexity.
Send everything enough times and in enough different ways and it will
get through.

But have you brought those modes to amateur radio?

> And, again, with today's
> level of integration, such a device takes an IC or two ... what's the
> big deal about that?

Takes a lot more than "an IC or two". First there's the radio itself,
then the decoder and encoder, the display system, and all the
software/firmware to make it all work together.

> > IOW, it all depends on what criteria you use for "better". Morse is
> > better for some things, while other 'digital' modes are better for
> > other things. Or perhaps we should say that Morse is better in some
> > way, while other 'digital' modes are better in other ways.

Is that not a true statement?
> >

>
> Again, I don't buy the arguments about "complexity" ... because of the
> low cost of high integration and the inherent reliablilty of such gear.

Only when someone else does all the work for you. How much of that
sort of thing have you done as a nonprofessional, on your own time,
with your own money, using only resources readily available to most
hams?

> Power consumption is something that one plans for in one's emergency
> preparedness planning ... all of my gear runs from 12VDC and I have
> substantial batteries (and the means to charge them for a LONG time
> without mains power).

All of which costs substantial money, takes up substantial space, and
is out of the reach of most hams.

> I plan to install a propane powered generator
> here at the house as well, eventually.

Great!

> With the 1000 gallon propane
> tank, and two vehicles as well, I figure I could keep my station batteries,
> the notebook computers, etc. charged for months.

Maybe - IF the tank is full when you start. And if you don't need the
vehicles for other things. And if the emergency doesn't do something
to the tank, which, if I am not mistaken, will be above ground.

But most of us can't have a 1000 gallon propane tank. In fact, the
limit in many areas is the tank on the barbeque grill.

It's great that you have the resources for such things, but most hams
simply don't. Should amateur radio be limited to only those who have
such resources?
>
> > PSK-31 is also susceptible to phase distortion and

> communications.
> (nor do I belive the inventor ever intended it to be ...)

Nobody said it was. However, it's a real mode that has been developed,
presented to the amatuer community and gained acceptance because it is
within the reach of many if not most hams.
>

Sure - what's wrong with that? That "magic" is a very big part of what
draws people to become hams. Take away the magic and you might as well
do email or IRC.
>
> I'm talking about "magical" in the sense of "having special powers to

The MODE and the TEST are two separate things, but it seems to me that
you feel compelled to minimize any and all good things about the MODE
because they might constitute an argument to keep the TEST.
>
> [snipped repetitive argments about what constitutes "magic"

> an EME system to gain widespread use ...

I don't believe that, because your professional experience works
against you. What you see as 'easy', 'practical' and 'low cost' is
beyond the reach of many hams.

> when I spoke of serious
> antenna work above, I was talking about the task of installing at

That's good - but such systems should NOT be a part of the "easy EME"
system. A single Yagi or small dish on a polar mount should not need
much of a tower to "see" the moon.
> > >
> > > > > (I am not so hung up on myself that "my way" and "what I've done"

> > expressed an opinion disagreed with you.
>
> The call was pretty close ...

54% to 46% in favor of at least two code test speeds. This was in spite of the fact that NCI had mounted an effective campaign to get their members to comment in support of "5 wpm and a sunset clause".

> and I am confident that with the
> continuing influx of no-code techs and the large number of
> folks who have been able to upgrade without jumping through
> the unnecessary 13/20 wpm code "hoop," that the tide has
> inevitably swung well in the direction that I advocate.

Mere speculation, nothing more. I read many posts, letters and other communications from hams of all license classes that say they want the code test kept. That includes hams who have not passed a code test.

I recall that some NCI members (at least two of whom were regulars here) resigned after the code test was dropped to 5 wpm because they said they did not want total elimination of the test.

btw, do not be fooled by the apparent large increase in Technicians since restructuring - many of those are Tech Pluses who got Techs upon renewal.

> (But, as I and others have previously said, the decision should
> NOT be based on a popularity contest in the community of
> incumbents,

It's not. Anyone can comment - no license or incumbency required. But the majority who bothered to comment not only wanted code tests, they wanted more than the one speed.

> but should, rather, be based on the sound judgement
> of the FCC as to what's regulatorily necessary and good for the
> future of ham radio.)

So the FCC knows best, huh? This is the same FCC that wants to implement BPL, remember? The same FCC that imposes odd rules about symbol rates on HF digital transmissions in the ham bands, regardless of bandwidth occupied, for no reason I can uncover. The same FCC that gave us incentive licensing, 27 MHz cb, and agreed to that ridiculously light penalty for a false distress signal.

The same FCC that not only thought Techs should have 1500 W power at meat-cooking frequencies, but who also reduced the written testing for

that license from 2 separate tests totalling 65 questions to one test totalling 35 questions. Medium rare, anyone?

They're not infallible, they're just in charge.

> knowing full well what their risks are.

You "honor" no one save yourself, Lennie. Never have...never
will. If John takes it upon himself to investigate what kind of
person you really are, he'll find out what we already know to be
true...that you are an untrustworthy, documented pathological liar
whose only reason for being here is the promulgation of hate, discord
and deceit.

Yep..they have a history. Lennie has one too...of lying, of
being deceitful, and trying to "polish" is military brass on the
graves of men who died in combat almost three years before he even

made it to boot camp.

And now I guess we can lump you in there too.

> > Lennie puts the "scum" in scumbag, that's for sure.

> Times or something. The truth will set you free.

I didn't say he was lying in this regard. I said he's vile and
disgusting for making light of these people's deaths?

Do you think it's funny, Burke? Seven people strapped into a
buring spacecraft? Real hillarious stuff?

If so, you just promoted yourself to Scumbag Second Class.
Lennie is first. Probably the only thing he HAS been "first" in.

> 73, Brian
>
> (Len, sorry to defame you in the above "Tuff Love" series. It was

You could have tried harder by getting your facts and attributions correct, Brian, but we all know you have a hard time doing that. Seems getting things right has been a life-long problem for you.

Considering your running mate, it's no wonder.

Another back-peddling "engineer".

Just a month ago he was adamandt that the code had to go to get
people in...

> I hate to say this, but vanity helps. Better to appeal to selfish motives than
> selfless motives. The emergency communicator, the public service aspect - What
> young person wants that?

Then get your $14.50 out...KV1PPY and KV1PUL are still available.

> When they call contesting competition, it offends the normal sensibilities.

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA....
! ! ! !

Calling "contesting" competition is offensive..?!?!

You have teams of Amateurs trying to beat other teams scores...

What's different about that than say...a chessmaster trying to
outscore HIS opponent? Or watching the Cowboys run over the Rams? Or
a poker player hoping his two of a kind beats what the other guy is
holding...?!?!

> Making short QSOs (oops, I used a codeword) and counting contacts. Contesting

What an idiot.

> Real competition is expanding one's limitations. It includes radio direction
> finding, APRS, mobile operation, tuning, troubleshooting, real emergency

> preparedness.

You don't "expand" limitations, Vippy...you exceed them, you
overcome them, you....

Oh wait...this is YOU we are talking about...Yes, I guess YOU do
"expand" your limitations...

> And don't forget the social aspect.
>
> Contesting is really boring too. It's human nature not to like boring
> activities.

Yeah...that's why there are more and more "bored" people every
year on the air...Sure is depressing to hear all those "bored" people
on those weekends, isn't it? Especially when YOU can't get in there
and be bored right along with them...

Somewhere in all of that was a point to be made, but I'll be
danged if I know what he was trying to get at...

>MHz to under 200 MHz range.

I could do that. Generate a 50-80 Mhz sine wave, then put it into a mixer with a 50 Hz crystal oscillator and turn it into a DC-30 Mhz signal. I think I could even get a brickwall high pass at 30 MHz so the whole thing would be broadband with no tuning.

Of course, you'd lose some stability in the process from those extra stages, but probably not enough to be a big issue.

Oh, and for 10M FM, of course, I could modulate the local oscillator.

Yup. I am sorry to report that my first homebrew rig did the same thing
too.

Some of the eastern european folks I know are still rockbound, and some of
them are cutting their own crystals. This is a recipe for parasitics, or
at least it was when I tried doing it in high school.

Frankly, I don't care one iota ... I see that as a totally unimportant issue
in
the grand scheme of things ... it is up to Morse enthusiasts to recruit new
Morse ops ... and talking down to those who are not interested will not help
that cause.
> >Could *I* become proficient at 20 wpm ... certainly, with enough use and

Again, it's up to the current crop of Morse enthusiasts to do any
recruiting.

> >There is essentially nothing that could make me interested in becoming "a

I don't buy that argument ... folks can be intelligent enough that, with
a modest exposure to Morse through personal contact with other hams,
seeing others using the mode, etc., they can make a choice as to whether
they are interested in purusing the mode or not.

Well done post Jim!

Carl, like it or not, your intense dislike of Morse code stands out
like a sore thumb, obvious to me and others.

Which is why, your protestations to the contrary, I believe you wish at
the *very* least, the complete marginalization of Morse code use.

purposes.
> Other than that, what does it matter about ARS license numbers?

Numbers = use of our spectrum = justification for keeping what we have
(and maybe getting a bit more in the future)

Numbers = political influence (also necessary to protect our spectrum)

Numbers (of younger hams) = hams that will survive longer into the
future ... with today's demographic, the sad reality is that a large
percentage of current hams will be SK in the next 10-20 years, resulting
in a major drop in our numbers unless we make ham radio more attractive
and interesting to the younger generation. To do that, we can't force the
PC/internet generation to cling to/embrace some "traditions" (such as Morse)
in which the "older generation" iks so deeply invested (in an emotional
sense).

>
> >eliminating Morse testing will help
>
> No, it won't. The entry-level license is already code free. Eliminating
Morse
> testing will not cause more people to want to join.

Many folks are interested in HF access as part of their "portfolio" of
capabilities ... the entry level license currently precludes them from
HF use ... that is a major disincentive to many.

There are many ways to get rid of something you don't like.

I see this a similar to blocking off the inlet to a lake, and watching
the fish die as it dries up.

Since Morse does take some effort to learn, there is no doubt that
less people will take the effort. There will most likely not be enough
new beepers to replace the old ones.

But you knew that already!

You reckon incorrectly. Although I am eligible for same, I have
never had any reason to take the exam for patent attorney.

I've made it quite clear in my postings that my specialty is
communication regulatory law - 29 years with the gov'mint and 8
years in private practice (plus 10 years of private practice in
engineering).

>included about 150 semester-hours of classroom time, of which about 120
>semester hours was in engineering subjects, the rest being things like
>economics, finance, mathematics, etc.

IIRC my BEE degree was more like 180 hours (4 years of 20-credit
semesters plus one summer of Surveying -- did you take that by any
chance? It came in real handy when I built my first house and when
I studied Real Estate Law in law school and when I discuss or plot
radio path and contour calculations or directional antenna patterns
with clients or even map-reading and "orienteering" with non-technical
hiking friends and relatives.

No chemistry in an engineering program? This is not the same as a
Literature or Cultural Humasnitiers course. This is basic science.

In an EE program we took a year of chemistry (class and lab), two
years of physics, one year of advanced math, and assorted courses in
non-EE engineering subjects such as thermodynamics, mechanics of
materials, atomic physics, and surveying, plus our rigorous EE power
and electronics courses.

That was 50 years ago. Now they require a lot more of "non-EE"
stuff such as environmental engineering and medical engineering
The school has acquired a reputation for application research in
those fields.

Otherwise one is not a rell-educated engineer - one is a geek with a
degree.

Har! Reminds me of when I worked in the field for a cable tv mfgr. The cable construction guy I worked with was from Talladega. When we met, we spent most of our time wondering just what the hell the other guy said.

Deep, deep south drawl and whatever they speak in the middle of Pennsylvania is a deadly combination, especially when after a summer of 12 hour days working with each other, we started to sound alike.

I don't agree with the analogy ... the FCC *does* care about the
Amateur Radio Service ... they just don't belive that requiring Morse
tests serves any legitimate regulatory purpose any more (other than
complying with requirements in the ITU Radio Regs that require(d)
Morse tests for folks whose licenses granted privs in the bands
below 30 MHz ... a requirement that has ceased to exist as of
July 05, 2003 ...) (Read the quotes from their R&O again ... it's
quite clear.)

> Sadly, many have lost sight of what this was really all about. Element
> 1 (Domestically, that is.) Rather than investing some time and effort
> to satisfy a very basic requirement that is an extremely important
> part of AR tradition,

"Some time and effort" can vary widely across the spectrum of
individuals ... for some it can be easy, for others it's nearly impossible.
Just as some folks can't "carry a tune in a bucket" with respect to
singing ability, Morse involves a "mode-specific aptitude" that folks
possess (or don't) in widely varying degrees.

I really wish that folks would stop trying to lean on "tradition" ...
maintaining "tradition" is NOT a legitimate regulatory goal that
should drive the requirements for licensing, plain and simple.

As to how "important" Morse is ... YMMV ... to some it is
the "be all and end all" of ham radio ... to others it is of no
importance whatsoever ... from the FCC's decisions, it's
clear that, while there was a time when Morse was important,
that time ended long ago and the FCC no longer views Morse
as important in terms of licensing requirements.

Those who believe that Morse testing should remain a requirement forever will, for the most part, probably never change their minds, but they are increasingly becoming a minority. Furthermore, their view, based more on "tradition" and "emotional attachment" thereto, is not relevant in terms of what the license requirements should reasonably be.

That's a bogus argument ... since the "freebanders" operate without any
regard for the law, why would the allow a Morse test requirement to
dissuade them ... they have no licenses to operate any way (and don't
care to get them) ...

This reminds me of the "We'll be over-run by the 'mongrel hordes' from
the CB bands FUD ... that hasn't happened either.

Get real.

The really important question is simply "how would such a system be
implemented?" IOW, who is going to develop it, set the standards,
build the equipment, put the stations on the air, etc.? I can imagine
all sorts of really neat systems I'd like to see (say, a
highspeed/"wideband" microwave digital network linking major cities
via ham radio, over which hams could have all sorts of QSOs through
local portals) but who is gonna put up the bux and do the work? I
don't see Carl, Vipul, Gary or anybody else stepping up to take on
even a piece of it.

> >
> > Why?

See above. Somebody has to actually DO it. Not just talk about it.

Lookit G3PLX and PSK-31. Guy developed an idea, worked on it for
years, recruited knowledgeable hams around the world for tests. One of
whom is a really sharp local Ph.D EE ham known to both W3RV and me.
When the bugs were worked out, they just gave it away to the ham
community - free software, step-by-step articles on how to connect
your lapper to your rig, excellent articles on how it works and why.

Once it was public, other hams got involved in software improvements, purpose-built rigs like the Warbler, demos, more articles, books, etc. Now mainstream "PSK-31 ready" rigs are beginning to show up on the amateur market.

How many years and how many hours and how many dollars/pounds/lira/shekels, all of it donated, went into the development of PSK-31?

Right. There's no way it will look exactly like the real thing.

Kinda like the idea of having athletes all over the world run the Boston Marathon on computerized treadmills surrounded by high-definition TVs, with automated weather simulation (heat, rain, wind, etc.) They're all covering the same distance under the same conditions, right? No need to close all those roads and deal with all the headaches of a real road race, right? And lots more people will be able to participate, without all the hassle of getting to Boston and back, qualifying for the race, etc.

> We've been
> down this road, i.e., the problem with logical/rational being the
> primanry drivers in ham radio. Ham radio is not a commercial service
> where logic is the driver. The standard issue ham is into ham radio
> for it's recreational value and the rest flows from there.

I gotta disagree here. Ham radio is driven by as much "logic" as any other radio service - often much more. But the driving forces are different. Take military comms - they want very high accuracy, very high security, very high speed, very high reliability. Size, weight and power consumption considerations vary all over the place from "doesn't matter too much" to "gotta be kept to absolute minimum". Cost and complexity are way, way, way down on the list. "Fun" isn't on the list at all. Radio is just a comms tool to the military folks - if something 'better' comes along tomorrow, they'll be all over it.

Which is where those surplus 55-75 foot tubular-section towers we've used on FD came from. They were originally meant for terrestrial microwave. You know what they cost the ham who wants one. You don't wanna know what Uncle paid for 'em. Ya think Uncle really cared what the resale value of those towers would be?

For hams, the top of the list is almost always "FUN". High on the list are cost, size, complexity, required maintenance, ease of use, useful life, resale value, etc. But FUN is the biggie, and if it ain't fun according to the perception of the "user", there ain't gonna be no users. And each user has his/her own definition of "FUN".

Pretty logical system, really.
>
Heck, the whole anti-code-test argument comes down to "why require
folks to learn something that they don't think will be fun to do?" and
"the people who see it as fun will learn it without a test".
>
> > > they're neat electronic ping-pong games but IT AIN'T FRIGGING RADIO.

And by doing so you miss the whole point of what makes it fun in the
first place: the fact that it's real and not a simulation.
>
> Then you better find a like-minded programmer who has extensive

I dunno, maybe Carl and Gary are able to do it. But will they? Don't
hold yer breath. Classic 'tie the bell on the cat' situation. See
above PSK-31 story.
>

The system they use also "cheats" in a way, in that it has an enormous
library of games that have been played before accessible. It can look
at a particular board position and check if that particular position
ever came up in any recorded game before, then see what was done and
how it came out.

Does the computer have "fun" playing? Just ask it.

> PC? Yeah, right. Not even a decent pipe dream.

Heck, just network everybody's computer together and we can run a
virtual contest whenever we want. No need for towers, amplifiers, etc.
Set up any virtual station you want.
>

> > > > transmit data reliably over transcontinental distances ... with power

Do the services who "don't know they are there" know what to look for?
Or do they just think their noise floor is a little higher?

> > > Times how many stations?
> >
> > Quite a few, but to be honest I don't know the exact number (and if I

Speaking of which, consider how many CW QSOs at 40 wpm could fit in
that 150 kHz of 20 meters. At least 300 without interference, meaning
at least 600 hams on the air in that space without frequency re-use.
And that's using really simple, dirt-cheap equipment like the receiver
I built almost 30 years ago whose pictures are now on the HBR site.

> > > I notice that TAPR has given up trying to get spread spectrum on the

Complex compared to what? More complex than a PC? Or was there too
much talk and too little action?

Maybe it was a solution in search of a problem.

Yep.
>
> Still slower growth than desirable by a long shot ...

Not much more than was going on before the changes of 2000. Much of
that 12,000 happened in the first year after April 2000.

> eliminating Morse
> testing will help,

What if it doesn't? Eliminating the 13 and 20 wpm code tests didn't
make much difference in growth at all. If we don't get lots more new
hams as a result of eliminating Element 1, will there be an admission
that Element 1 wasn't a real barrier, and will it be replaced? I don't
think so.

> but more needs to be done to promote ham radio
> to those <40-50 years old if we want long-term survival ...

Like what? TV spots?

> I'll be
> 53 in October and I'm in the youngest quartile as far as I can estimate.

Based on what data? Is there a reliable source of amateur age info?
The FCC database has some but not all. Plus the 10 year license term
tends to warp the data.

--

A lot of local hams I know are senior citizens who got their licenses
relatively recently (10-20 years ago) as a retirement activity. Lot of
folks who said they always wanted to be hams, but only after the kids
were grown and gone and the house fixed up and paid off did they think
they had the time, space and money. They look to me as an old-timer!

> Gee ... I have no idea how you have the faintest clue (hint: you don't)
> about my ability to write code ...

True, but I do have more than just a "faint clue" about your Morse and
contesting knowledge and skills.

I know where this is leading. Like the bunch of times I've gotten
stuck managing production facility design/build projects in part
staffed by idiot code warriors who did the controls programming. And
who didn't even know how to figger out the input from the output ends
of a conveyor line in one particularly memorable programming debacle I
had to unscrew.

There's nothing more fun to deal with than a pile of junk code written
by some geek who hasn't the first clue about the real-world needs and
expectations of the end users of the program. Like like what would
result from a CW contest simulator you wrote. Let me count the times .
. .

> I wasn't talking about automating contest operation ... simply allowing
> programmable channel

Hey Carl, refresh me, how many "channels" to we have on 20M? Once a
Tech always Tech huh?

> impariments at the receive end to make "reception"
> as difficult as one wants, despite the fact that the underlying
> communications
> system is very reliable and robust.

I'll tellya what the average contester's response to your basic
concept would be: "Why would I go thru all these computer pushups when
all I have to do is fire up my radios and get on the air and have the
real thing?"

As far as "reliable and robust" is concerned if I need both or either
all I have to do is dial into Ma Bell's system or log in via my ISP.
Who needs your "help" if that's all I want?

Using a "reliable and robust" system like you're suggesting in the ham
bands would be like imitation chocolate and having sex with a porno
doll. Ain't never gonna happen for just that reason.

> another
> souvenier ...

Wunnerful wunnerful loverly. So howcum, with all this over-the-edge
expertise and a nickel Extra to boot you haven't led the way and put
SS on the air Carl? You've also committed to tossing up a couple
towers and doing some whizzy low power EME too Carl. Whew, looks to me
like you've bought into a pretty full platter. Tell me Carl, when does
your bafflegab turn into the hardware?

Whatever. I'm not holding my breath. You is what you is, all yer gonna
do is talk, talk talk.

In the meanwhile I have a radio here which is upside down and with the
covers off which needs a bit of surgery, time for the sodddering arn
again so that I can get back to beeping this weekend. And dayum, I
just noticed that some of the screws in these little upright, square
aluminum thingys on the PCB seem to be loose, guess I better tighten
'em huh?

Yee-haw!

Seeya around the bands Good Buddy.

Mike ... yes, I don't personally like Morse ... however, once again,
I have NO PROBLEM with those that DO, as long as they desist
from attempting to force it on everyone else and denigrating those
who don't like Morse and resist having it forced on them.

Honest ...

> There are many ways to get rid of something you don't like.

First, (over and over again) we have said, quite honestly, that
we have no goal of eliminating the ability of hams to choose
voluntarily to use Morse, nor to restrict that ability. ALL that
we object to in terms of regulation is the REQUIREMENT
that everyone pass a Morse test to get a license with privs
in the 160-10m bands. (Yes, we object to those who insult
and denigrate those who agree with us, but that's a social
issue, not a regulatory one ...)

> I see this a similar to blocking off the inlet to a lake, and watching
> the fish die as it dries up.

This is a poor analogy ... you guys are really big on poor analogies.

Unlike blocking the inlet to a lake (preventing the inflow of water),
removing the Morse test requirement does NOT preclude ANYONE
who WANTS to from learning and using Morse.

> Since Morse does take some effort to learn, there is no doubt that
> less people will take the effort. There will most likely not be enough
> new beepers to replace the old ones.

It's up to "the old beepers" to recruit new ones ... THAT is NOT a
legitimate government regulatory function.

As I said, I have no problem with folks using Morse ... but it's no
more my job than the government's to be YOUR recruiting force.
If you want "new beepers," YOU recruit them from those who
are willing ... but that would require some effort on your part,
wouldn't it? It's "easier" for you if the government forces folks
to learn Morse to get an HF license ... then you don't have to
"recruit on the merits," just skim off the ones who decide they
like Morse.

So which group REALLY is unwilling to put forth effort to achieve
a goal ... those who have no desire/intention of using Morse (using
Morse is, after all, not THEIR goal), or those who want a continuing
supply of Morse users, but aren't willing to put forth the effort to gain
"recruits" by working for it, rather than relying on a government life
support system to provide (at least some number of) "recruits" ?????

Next time you talk about folks "putting forth effort to achieve
a goal" think about that one. Maintaining a population of Morse
users is/seems to be YOUR goal ... it's not my job, nor the FCC's.

Do your own recruiting work! (and if you're unwilling, don't complain)

> > HOWEVER, phone band expansion is NOT an NCI agenda ... the ARRL has,

> But it isn't all about *you*

Then bitch about it to the folks who you think DO favor phone band expansion
and leave me (and NCI) out of that one ... it's not our agenda.

"Channel impariments" refer to the "propagation channel" and if you
had an idea of where to beg, borrow, rent, or steal a clue you'd
know that ... but then again, it's a technical term ... I guess I shouldn't
expect that you would be familiar with it ...

> real thing?"

Is loading a program onto your PC such a difficult thing for you?
Poor fellow.

The idea is to provide the same user experience in terms of noise,
fading, static, QRM, etc. WITHOUT actually trashing the band
in a way that precludes other uses at the same time.

>
> As far as "reliable and robust" is concerned if I need both or either
> all I have to do is dial into Ma Bell's system or log in via my ISP.
> Who needs your "help" if that's all I want?

And when you need that reliability and robustness for emergency comms
and conditions are poor? Oh, yea, you rely on Morse ... despite the
fact that there are alternatives that are "better" (as defined in my reply
to Jim) ... how quaint.

Thanks for posting the letter with the details, Keith.

Interesting to note that this was "my" former office, and I can
picture the two agents involved (and their wives and kids) and now
that I have read the letter, I can offer some more comments.

This unlicensed operation took place on a frequency not in or
adjacent to any amateur band, and as such, Riley Hollingsworth is
not involved. It's strictly a District Office project. The fact
that he has an amateur license has no bearing on his culpability at
this point. In fact, the law prohibits the FCC from going after his
license for failure to pay a monetary penalty unless the matter has
been litigated to a final judgment in an evidentiary proceeding
either before an Administrative Law Judge or within the Federal court
system.

If after the unlicensed operation matter is settled, the Bureau
determines that he does not possess the moral character to remain a
licensee, they must institute formal proceedings to revoke his
station license and suspend his operating privileges for the
remander of the term. This starts the circus all over again.

From the letter, "restoration of the equipment" appears to be only
the first step in the enforcement process. Based on what's going to
happen next, my guess is that they did not want to accept the
voluntary surrender of the equipment as a "plea bargain" for
deferring further action, but could not let him continue to have the
means to create further intentional violations.

The letter requires him to make certain statements about
how, why, and what. There's no "Fifth Amendment" rock to hide
under in an administrative proceeding.

After he replies, my best guess is that the office will issue a
Notice of Apparent Liability for a substantial amount. Then, the
bargaining can begin as to whether he is capable of paying such an
amount - ability to pay is one of the factors that the law requires

the issuing officer to consider when finalizing the forfeiture amount. It appears that they have enough evidence to proceed even if he denies everything or refuses to answer.

It's up to the USCG to get the U S Attorney to file charges if the issue of false distress is to be pursued criminally. If so, I hope that the U S Attorney's Office (Northern District of California) will also move on the "Mervin" case that the FCC and the USCG brought her ten years ago for doing the same thing. Speedy they are not. Both the USCG investigator and I have retired in the meanwhile.....

It will be interesting to see how this case proceeds.

>Are you saying that if I install any of these types of mods in my
>Yaesu xcvr I'm in violation?? If yes then we have one *helluva* lotta
>violators roaming the bands, thousands of us.

Only if the receiver section is of a type that is required to be
type-certified. In general, that's for VHF and above receivers.

Installing such a mod in a type-certified receiver voids the type
certification, which raises two separate issues.

(1) The receiver (or transceiver) can no longer be conveyed to
another party (sold, given, shipped, all the good words in Section
302(b) of the Comm Act) unless the manufacturer recertifies the
receiver with the mod (i.e. approved the mod and stated that with
the mod the receiver still meets seignal leakage specs).

(2) if the mod causes harmful interference to another licensed
station ("freebanders" are fair game but I never said that) then
you would be liable for using same.

Yeah, I know it's weird - put a preamp inside the VHF receiver and it
busts the type certification. Put it in a box with a transistor
battery and hook it to the receiver antenna terminal with a wire and
it doesn't. I never said that the equipment certification rules
were logical, only that they are "the rules".

Whatever worm is left in the can - put it on a hook and catch me a
trout.

Are you referring to the Marconi site in Marshall, or the ex-RCA KPH
sites at Pt. Reyes and Bolinas?

AFAIK the KPH sites have pretty good "proteksia" at the NPS because
of the restoration. I haven't been at the sites or involved with
the group for four years now but I don't think things have changed.

The Marshall site is something else.

There are alternatives. Just the other day my neighbor commented that
he was considering a move to Pakistan or India for the opportunity to
build a better life for himself and his family. ;^)

The hams are the most qualified to judge what is good for the future of ham
radio. However, FCC involvement is need because the hams will ignore the
needs of other services just as the other services ignore the needs of hams.
It's a balancing act and the FCC is the juggler.

> The reality, however, is that the FCC is the determining body.

Read up on the history of the FCC. They were established to regulate the
various services so all could operate with minimal interference. If there
had been no conflicts among the various users of the radio spectrum, there
would have been no FCC (see the book "200 Meters and Down").

>
> > There purpose is not to maintain ham radio or decide

As stated above read up on the early years of radio and the establishment of the FCC. We were very lucky that ham radio was allowed to continue to exist since the commercial and military interests wanted us gone. It was only by intense lobbying on the part of the hams that we managed to stay in there.

>
> Again, bottom line...FCC does the deciding.

That's a totally illogical non-sequitur. I believe in following all the
regulations. That's why the FCC exists: to regulate so that all the services
can coexist. I've never said that we should ignore it. However we hams
have a responsibility to actively lobby (either personally or by supporting
organizations like the ARRL) for the good of ham radio. Our voice needs to
be heard along with all the other parties interested in the radio spectrum.

> tests serves any legitimate regulatory purpose

Please stop right there. What's the hang-up with this "regulatory
purpose" stuff. I don't believe it's ALL about regulatory, it's has
something to do with a rich tradition wrt a mode that is still widely
used today. Tradition really does count for something and requiring
folks to learn the very basic level in order to pass a 5-wpm hardly
constitutes a "barrier." This is very likely how many will get their
only taste of Morse. Neither CW or it's proponents will sell it on
it's own merits. Sad to say, but many of today's generation just don't
understand why they "have to" learn all that stuff they'll never use.
The recent Regents fiasco is a grim reminder. Only 12 students passed
the test that was really no harder than many folks had taken in years
past. The first reaction..."the test's too hard," from both the
parents and the kids. Rather than take the heat, the DOE is going to
give them an easier test. Behold the result of second generation
underachievement. I strongly disagree, Carl. I think it's a "spot-on"
analogy. It'd almost be amusing if it weren't so sad.

> any more (other than

If by "mode-specific aptitude," you mean sitting ones you-know-what
down for 20 mins./day for a mo. and trying some good old-fashioned
study/practice, you'd have a point.

> I really wish that folks would stop trying to lean on "tradition" ...
> maintaining "tradition" is NOT a legitimate regulatory goal that
> should drive the requirements for licensing, plain and simple.

I wish folks would stop leaning on "regulatory" as if it's ok just
because big brother says so. Especially at the 5-wpm level, puh-lease.

> As to how "important" Morse is ... YMMV ... to some it is
> the "be all and end all" of ham radio ... to others it is of no
> importance whatsoever ... from the FCC's decisions, it's
> clear that, while there was a time when Morse was important,
> that time ended long ago and the FCC no longer views Morse
> as important in terms of licensing requirements.

A 5-wpm test where you have to peg 25 in a row....with numbers,
puctuation marks, and prosigns count double...and you get lotsa time
to fill in the blanks at the end...the "be all and end all" of ham
radio?! ROTFL Like I said, Carl, it'd almost be amusing... :'-(

> Those who believe that Morse testing should remain a requirement
> forever will, for the most part, probably never change their minds,
> but they are increasingly becoming a minority.

That's funny. Sure isn't the sentiment I hear on HF. I guess that
"minority" must be on HF. Sadly, I wouldn't expect the welcome
wagon...but I hope I'm wrong about that.

> Furthermore, their
> view, based more on "tradition" and "emotional attachment" thereto,

Please read "200 Meters and Down". It is an excellent history of the actions taken by the government regarding radio services. Twice the government tried to eliminate ham radio. Once was by limiting amateurs to wavelengths of 200 meters and shorter since the "experts" believed such frequencies were useless. The government also tried to get rid of hams by delaying the re-opening of the bands to amateurs after World War I. If it had not been for the hams lobbying the government, we would not have recovered from the latter. The FCCs sole purpose is to regulate and administer the various radio services.

Dee, you must of not read what I wrote. The Hamfest was on Friday and Saturday. Friday is a work day. Several Hams took a day off to attend on Friday and Saturday. Therefore, it was partly scheduled during work. Yet, people were able to come.

I didn't want to be direct and was still hoping people would understand. Thats not what I meant by free social time. I meant that hams should not be at their radios on Saturday night. Yet, at hamfests and ham gathering events (such as DXpeditions), hams are at their radios the whole night.

It was posted here on 6/22, but here it is again:

>Looks to me like type acceptance is required. Or is there some other
>flavor of FCC approval?

Yes there is. Type acceptance as we knew it is no longer in
existence. The equipment authorization processes are now
"certification" which requires submission to the FCC of test
measurements of compliance with applicable Rule sections
(essentially the same as type-acceptance was), "Declaration of
Conformity" which is the same as "certification" but the tests are
made by an authorized private-sector testing facility and not
submitted to the FCC, and "verification" which requires no
submission to the FCC but merely a statement by the manufacturer of
compliance with the limits set forth in Part 15 of the Rules.

See FCC Rules, Part 2 Subpart J.

>Calling "contesting" competition is offensive..?!?!
> You have teams of Amateurs trying to beat other teams scores...

Its competetive. Things is hams don't like other kinds of competitions, such as radio direction finding. Hams stay with their activities.

>From: "Carl R. Stevenson" wk3cqth@wk3c.com

>Numbers = use of our spectrum = justification for keeping what we have
>(and maybe getting a bit more in the future)

Don't forget, having more activities, rather than fewer also helps. More growth in homebrewing, tuning, direction finding, emergency communications, APRS, etc.

Somehow I think you are misunderstanding my point of view. If they do not
wish to exercise the privileges that come with an upgrade, then there is no
need to upgrade and that's fine with me. It's those who want the privileges
and whine about having to do the work to get them that bother me.

>

>

Again, no one has a problem with a person who prefers not to upgrade and explores those areas for which he/she is licensed. The problem arises when someone wants the upgrade privileges without the upgrade work.

Excellent....send that to your Section Manager with recommendations it be forwarded to the FCC while there pondering how to destroy ham radio with BPL.

There will be a big market is 'serious' amplifiers. BPL will be knocked for
a loop so often it will be rendered useless.

Not to mention the court cases that I HOPE will follow. We are the LICENSED
service.

One more thing. Remember the FCC and their decision to increase a owners amount of radio/tv stations he could hold? Well a committee in congress has put a kink in that plan.

I think we hams and other HF users should do the same thing. Write ALL your reps in congress. The FCC is obviously not qualified to do what it is doing. Anyone that even considers deploying BPL is braindead.

Please read "The Art and Skill of Radiotelegraphy". The problem that people generally have in learning the code are incorrect study methods and unrealistic expectations. Yet when proper training methods are employed, achieving 20wpm is within the reach of almost everyone whether or not they have any talent for it. Now setting world records does require talent but you don't have to have talent to be OK at something.

The same applies to learning to sing. The number of people who are truly tone deaf is miniscule. However there are a large number of people who "can't carry a tune in a bucket" because they have not been taught how to discriminate and reproduce different pitches although they can hear them as different tones. Some people come by this ability to differentiate naturally and some have to be taught. Those who can't carry a tune are in the latter category. Anyone that can hear the notes can be talked to sing passably well although not everyone will be a Pavarotti. Unfortunately a lot of so called vocal instructors don't know how to teach it. Read the book "The Joy of Music". A church choir member was going to be asked to leave because he "could not sing". His real problem was pitch matching. Once he found a teacher who knew how to address the problem, he rapidly developed a truly magnificant singing voice.

Wouldn't surprise me. The FCC requires the use of the least amount of
power needed to establish a given mode of communication. If BPM fills
the whole HF spectrum with S9-level fog, then QRP will go out the
door, and maximum-legal power will become technically necessary to
"burn through".

I'd hate that. So would our neighbors. Expect a big increase in
TVI/RFI complaints.

Similar things might happen with other licensed HF services... they
may also have to crank up their power.

Thank you.

I've been trying to decide what kind of comment I want to send the FCC about BPL.

I do not have Cable anywhere near my Home, I do not have access to DSL, and enough trees I cannot use Satellite.

So, I'm a "CB Plusser", I don't care anything about HF, especially after listening to some of the Potty-Mouthed "Extra Jerks", at least with BPL I can have some controll over what my Grandkids hears and sees.

Hummmm- no contest. BPL wins.

That, in a nutshell, is gonna be my comment to the FCC.

(Vipul wrote:)
>>what does it matter about ARS license numbers?
>
>Numbers = use of our spectrum = justification for keeping what we have
>(and maybe getting a bit more in the future)

Not necessarily! What really matters is how many ACTIVE hams we have, and how active they are.

There are more US hams now than ever before. More modes, more activities, smaller and much less expensive equipment, etc. We have about the same amount of spectrum below 500 MHz as we had 45 years ago, when there were fewer than half as many US hams. (WARC-79 added 250 kHz of HF in 3 bands, and we lost 220-222 MHz about a dozen years after that).

But are the bands full-to-busting with activity 24/7? Yes, it's hard to coordinate a new repeater in some metro areas - but are all the existing ones tied up around the clock so that we need more?

>Numbers = political influence (also necessary to protect our spectrum)

Only those who are active will have influence. Back in the '60s, with about 250,000 hams and no internet or email, FCC got over 6000 comments in response to its restructuring proposal. A few years ago, with about 675,000 hams, and the ECFS system, FCC's restructuring proposal got less than 2300 comments. (It is left to the reader to figure out the percentages).
>
>Numbers (of younger hams) = hams that will survive longer into the
>future ...

Only matters if they are active. I know several hams who got licenses back in the '80s and '90s for "honeydew" purposes. Now they have cellphones. Will they renew when the license runs out? Don't count on it.

> with today's demographic,

What IS today's demographic? Do you have a reliable source?

>the sad reality is that a large
>percentage of current hams will be SK in the next 10-20 years, resulting
>in a major drop in our numbers unless we make ham radio more attractive
>and interesting to the younger generation.

Actually, the younger generation first has to know ham radio even exists.

>To do that, we can't force the
>PC/internet generation to cling to/embrace some "traditions" (such as Morse)
>in which the "older generation" iks so deeply invested (in an emotional
>sense).

How do you know, Carl?

From 1996 to 2001, I did Field Day with a local group of clubs at a local park. Location was chosen for visibility to the non-ham public. Lots of young people came through, asked lots of questions, took lots of literature. The computers and voice operation got a passing glance from most of 'em. But they were almost universally fascinated by the CW tent, where I and a few others held forth, with one ham operating while another explained and translated.

This was not an isolated occurrence - it happened again and again. The fact that we were making CW contacts faster and with less effort than the 'phone folks was not lost on the visitors, either.

>> >eliminating Morse testing will help

>> No, it won't. The entry-level license is already code free. Eliminating
>> Morse testing will not cause more people to want to join.

Yup. The real problem is things like lack of publicity.

omigawd, I'm agreeing with Vipul!

>Many folks are interested in HF access as part of their "portfolio" of
>capabilities ... the entry level license currently precludes them from
>HF use ... that is a major disincentive to many.

I disagree 100%, but let's put that aside for a moment.

Suppose tomorrow morning, next week or next month, by some method or another, FCC just dumps Element 1 and merges the Tech and Tech Plus licenses. The entry-level license will then have some HF access, consisting of little CW-only slivers of 80, 40 and 15 meters, plus a slightly bigger chunk of 10 meters with SSB and CW. All with a power limitation. Above 30 MHz, though, the entry level license has all privileges. Is that really the best arrangement? Will the removal of Element 1 fix that alleged disincentive problem?

Or are other changes needed?

> Is loading a program onto your PC such a difficult thing for you?
> Poor fellow.

No Carl, I'm actually quite adept at loading software. I'm also quite
adept at getting on the air without needing a computer which I much
prefer unless I want to run RTTY or PSK/MSK.

> The idea is to provide the same user experience in terms of noise,
> fading, static, QRM, etc. WITHOUT actually trashing the band
> in a way that precludes other uses at the same time.

Yeah, uh-huh. Everybody give up real-time on-the-air interaction with
the natural vagaries of propagation, interferences and "unprocessed"
direct contact with other humans and climb into their Winboxes and
play computer games while Stevenson & Coffman Inc. trash the bands
their way.

No even after pigs learn to fly Carl.

Don't take my word for any of it Carl. Request the NPRM and see what
happens. Oughta be a piece of cake for you since you know all them

guys.

> to Jim) ... how quaint.

Bullshit. When were the last three times any hams handled or tried to handle any serious emergency over a difficult HF path with any mode? "Reliability and robustness for emergency comms" is about the weakest justification for your "system" I can imagine.

I suspect that I could shred your system reliability claims with a few keystrokes in Mathcad by simply running a system parts count vs. reliability analysis. How many parts are there in a laptop anyway?

I'm not into RACES and never stated that I was. But I have passed more third party long-haul H&W traffic than you'll ever manage to do and every bit of it was via SSB. Plus I've passed a bit of minor emergency traffic via vhf FM.

I have two charged & ready to roll 2M 5w HTs with gain antennas right here Carl and a couple 50w 2M mobile rigs. I can toss either in the car and have it on the air in a minute or two. If things get really nasty I also have an HF mobile rig I can also "deploy" in the car. And I don't need a computer to do any of it. Everybody knows that only place in the ham bands you'll likely run into a real emergency is on 2M and I'm good to go right now while you're still "planning" some grandiose homebrewed Lehigh County EOC. Not that I expect that to actually happen of course.

Your argument fails because the spectrum, both above and
below .100 can legally be shared with data today.
```

The digital segregation now
is by agreement, not by FCC mandate. If digital users increase,
they'll increase to where they easily can...below the .100 if
that segment is being underused.

Recalkl too that subbands are primarily a USA
practice and even our nothern neighbor has no
such limitation on phone in the "non-phone"
segments per USA laws.

Cheers,
Bill K2UNK

So convince the FCC that some august body of hams (elected? appointed?
approved by?) should take over setting FCC part 97 rules.

> However, FCC involvement is need because the hams will ignore the
> needs of other services just as the other services ignore the needs of
hams.
> It's a balancing act and the FCC is the juggler.

So you are then saying the FCC should NOT make any
rules regarding operation within ham bands that don't have
any interfernece issues related to them...such as
band segments for phone vs data, etc. morse test
requirements, etc.?

> > The reality, however, is that the FCC is the determining body.

That is so patently obvious...it does not,
however, prove or make any suggestion that the FCC
today does not consider rules as being beneficial or not
to ham radio service.

> > > There purpose is not to maintain ham radio or decide
> > > what is good for it.
> >
> > I would argue that these are also part of FCC goals
> > for ham radio or any other service.
>
> As stated above read up on the early years of radio and the establishment
of
> the FCC.

The initial purpose of the FCC derived from interference
mitigation. The charter of the FCC does not, however,
forclose consideration of what is or isn't beneficial for any
individual service.

> We were very lucky that ham radio was allowed to continue to exist
> since the commercial and military interests wanted us gone. It was only
by
> intense lobbying on the part of the hams that we managed to stay in there.

All of which happened about 80+ years ago.

> > Again, bottom line...FCC does the deciding.
>
> Yes I certainly agree they do the deciding.

Which makes all this discussion rather academic.

Good grief, what should they be doing on Saturday night? I have a
social life also, but no one is dictating what night I'm socializing.

I would say that people shouldn't be spending all their weekends partying.

> Yet, at hamfests and ham gathering events (such as
> DXpeditions), hams are at their radios the whole night.

And this is bad, why? I rather enjoy the late shift at field day.
Doesn't do me any harm, but for a bit of sleep lost.

Great post Bert, ya sed it all, I wish I'd written it. Your Regents analogy was masterful. They don't have the gumption to achieve so dumb the exams to "their" achievement level and their "problem" goes away.

The FCC is about "regulatory purpose." If there's no legitimate
purpose for a regulation, the regulation should not exist.

> I don't believe it's ALL about regulatory, it's has
> something to do with a rich tradition wrt a mode that is still widely
> used today. Tradition really does count for something

Yada, yada, yada ... regulators have no business making/keeping
rules that serve no purpose other than to "maintain tradition."

> I wish folks would stop leaning on "regulatory" as if it's ok just
> because big brother says so.

I'm not saying "its OK because big brother says so," I'm saying
"Big brother shouldn't be making/maintaining regulations that
have no legitimate purpose."

I *was* "OK" at Morse ... but I have NO interest in using that mode and
will likely never do so again in my life. I would have been a much more
valuable asset to the amateur community if I'd had access to HF those
years I didn't simply because of Morse ...

The point is that amateur radio is, per the FCC's own pronouncments
(and they are the ones that set the rules of the game), primarily a
technically-oriented service ... they see no need for making people
practice an ear-hand coordination drill (which has nothing technical
about it) to acquire proficency that isn't necessary and many, if not
most, won't use.

I just cannot grasp how otherwise (presumably at least reasonably)
intelligent people can cling to insistence on the acquisition of such
a mechanical skill in such a quasi-religious fashion. It's about
as ridiculous as asserting that all hams should be tested for their
ability to hop on one foot, while patting themselves on the head
with their left hands and talking on an HT with their right hands
at the same time without losing their balance. Some folks could
do it easily, some with more difficulty, and some would probably
fall over. Insisting on Morse skill for to obtain what are for the
most part TOTALLY UNRELATED privileges is absurd ... there
is no other way to describe it.

Why should one be forced to learn to play the piano if what one REALLY
wants to do is to play one or more OTHER instruments?

Would there be ANY sense in a rule that said "You can't play any other
instrument, no matter how good you might be at it, unless you first
demonstrate
that you can play the piano proficiently." ???

I don't think so ...

>that time ended long ago and the FCC no longer views Morse
>as important in terms of licensing requirements.

Carl:

The above statement can be objectively evaluated only in the
context of future ARRL initiatives and FCC actions regarding
amateur HF sub-band mode authorizations. Once code testing
is finally abolished in the US amateur licensing process, it will
be much easier to re-allocate more spectrum to phone modes, to
the detriment of CW -- and I rather suspect that's precisely what
will happen.

>Those who believe that Morse testing should remain a requirement
>forever will, for the most part, probably never change their minds,
>but they are increasingly becoming a minority.

Unfortunately, this is true.

>Furthermore, their
>view, based more on "tradition" and "emotional attachment" thereto,
>is not relevant in terms of what the license requirements should
>reasonably be.

However, they will have no practical experience in Morse/CW upon
which to objectively base such an opinion. Therefore, the usage of
CW will be deferred to increased spectrum allocated to phone modes,
mainly for the purpose of selling more HF transceivers and other
station equipment, and memberships in the ARRL. And THAT, my
friend, is the real Joker in this particular deck of cards.

>recruiting.

I don't believe that the use of Morse code is something that is "recruitable,"
if there is such a word. My own personal experience would lead me to
believe that the only thing that will get someone to try it is some kind of
overwhelming incentive. We used to have that incentive in the
Pre-Restructuring
Era. Now that it is gone, to rely simply on enticing people to Morse/CW with
the promise of better operating capability will probably not resonate very well
with the majority of newcomers who, basically, are going to be refugees from

the Citizen's Band, who just want a louder, more frequency-agile box to plug their microphone into.

That's not the same thing, Carl. I was referring to their "opinions," or subjective impressions, of the Morse code. The decision-making process they apply to decide whether or not to attempt to learn it is a much more objective process.

Dick:

Carl must have some serious "issues" with Morse code that go a lot deeper than any of us can imagine. Perhaps as a child, he was locked in his room with a key and a code practice oscillator, and told he couldn't have any dinner until he practiced for at least an hour.

>
>Glad it went well, tho'.

Mike:

Thanks. My "last meal" before the procedure is a story in itself. I was
preparing said meal on Sunday evening. As I attempted to chop some Savoy
cabbage, the tip of one of my razor-sharp kitchen knives snagged the palm of my
left hand, making a gash about 1" long and bleeding profusely. So, I
immediately put a death-grip on a towel, and headed for the Emergency Room at
Kent General Hospital here in Dover. After about 3 hours of being exposed to
every microbe in Kent County, I had four stitches in my hand. No problems, it
was a clean cut and missed the Ulnar (?)
nerve, so there will be no complications. Just gotta go around for the next
week looking like a casualty. The stitches can come out Tuesday next. I never
did get that "last meal" since it was almost Midnight before I got back home.
By the time I got done doing a one-handed job of cleaning up my kitchen, which
looked like a crime scene out of CSI Miami, it was too late to eat anymore.
Actually, it made my "prep" on Monday a bit easier, I'm sure.

You have to learn to play the piano to get a degree in music whether you
plan to be a teacher or performer on some other instrument. Even if you
will never have a need to play the piano, you still must learn it to get
that music degree.

However they don't have to become proficient on the piano just like hams
don't have to become proficient at Morse. In either case, they only have to
learn the basics.

Len isn't authorized any operation on any band under Part 97. Len has
no license. If he operates without one or if he (fat chance) lowers
himself to obtaining a license and operates on frequencies outside those
allocated to him, he can be dealt with by the FCC.

> Then he would have a claim to validity (and greatness)!!!

He has numerous claims.

Yes, there are hams who enjoy radio direction finding.

> Hams stay with their activities.

Yes, they do. You'll find it difficult to persuade other hams to drop
what they're doing and to do what you want to do unless it coincides
with what they enjoy doing. You seem to have a problem with the
concept.

From: Scam Alert <Scam_member@newsguy.com>
Message-ID: <bf7rg10kj7@drn.newsguy.com>
Source record: 71733

This scam is being pushed by scammers in foreign countries that are using the ruse to obtain credit card numbers. Qrz.com, QSL.net and eham.net are being confused by another RSGB program to think that this is legitimate. If you have given out your credit card number to join the RSGB $2 "guinea" program then you should contact your credit card company ASAP to cancel your credit card.
If it sounds to good to be true then it is. I also encourage the RSGB to stop their original campaign that is now being used like Nigeria 419 scam letters to ripe people off.

Not what they said at all, they said "fundamentally" a technical service.
Big difference. The license is to OPERATE, with the station part of the license
and the callsign authorizing the same operator to INSTALL station equipment
with which to operate. Yes, it does allow building, experimenting, and all that
can concievably go with, but nothing whatever is mandated.

> they see no need for making people
> practice an ear-hand coordination drill (which has nothing technical
> about it) to acquire proficency that isn't necessary and many, if not
> most, won't use.
>

You mean that Bill Cross doesn't, since it would definitely pose a problem when
a few of you NCI types went "over his head" to management, who knows and cares
nothing of Part 97 rules save that they be as troubleless as possible, and hang him
for a
"Luddite" who would dare to assert that radiotelegraphy might indeed be of some
true communications value, despite the emergency of more modern technologies.
Bill is no dummy, he knows he has a career to protect, and he's reputed to be a
fan of CW on the ham bands, so it's fairly certain he's not misinformed. He's taking
care of business-his busisness, and he's sure not dumb enough to give you an opening.

>
> I just cannot grasp how otherwise (presumably at least reasonably)

Entirely typical of your knowledge and grasp of radiotelegraph communications.

> Insisting on Morse skill for to obtain what are for the
> most part TOTALLY UNRELATED privileges is absurd ... there
> is no other way to describe it.

Only when you're a NCI addict. Those who know ham radio radiotelegraphy
see an entirely different view

You've got it Dee. Some 20 years ago when the question pools and easy access to testing was begun it appeared that most of the problems potential hams had in getting

access to ham radio licensing were resolved.....save on -. Personal initiative.

When it comes to RDF, perhaps you don't know where to look. Try searching for "fox hunting" or "T-hunt" instead (common ham radio nicknames for RDF). A very quick internet search found these fox hunting club web sites in Massachusetts and Connecticut...

Massachusetts
http://www.qsl.net/ka1jbe/foxhunt.html
http://www.nobarc.org/hounds/

Connecticut
http://home.cshore.com/tmik/fox.htm

The following web site has many fox hunting links...

http://members.aol.com/homingin/links.html

There are certainly other web sites for the areas you mentioned (MA, NH, and CT). I just didn't have time for an in-depth search.

Fox hunting, or RDF, is a popular ham radio activity. It is fun and very inexpensive to get into. If nothing is happening in your home town, consider starting up some activities yourself.

And, of course, the internet is flooded with web sites on the other things mentioned (home brewing, emergency communications, and so on).

Brian, Lennie IS a liar in more ways than one.

In this case he's an insensitive creep who used a horrific
tragedy to try and "make a point" about Amateur Radio licensing and
the "Ham in Space" program.

I am not wrong. His track record of pathological mistruths is
clear and well documented. In this there is no error.

That you so adamantly support and defend him can only mean that
YOU support lying and insensitivity as legitimate forms of
communication. That makes YOU as equally disgusting and foul as
he...perhaps even more so since his conduct may be due to some mental
health abboration and yours MUST be a voluntary choice of actions.

No, Brain...No need for me to "face up to it" here. Lennie has
created the path he's following. That you choose to drop in behind
him only means you LIKE the stench and the reputation of being
associated with a liar and a creep.

That's for YOU to "face up to".

There's a much easier solution!! Have the FCC propose a rule that
communication receivers cannot have receivers with sensitivity lower
than 50 microvolts!

If 60 dB noise levels are real an amplifier won't help me hear the weak
ones! So, simply eliminate the ability to hear the weak ones and we will
all be happy, NO? It's much easier to install a 60 dB pad on a receiver
than pushing amplifiers and Long John Yagis. Hmmm ... ;-)

>band segments for phone vs data, etc. morse test
>requirements, etc.?

Nope. Not at all.

The point is that the mere fact that FCC enacts a rule does not mean it's a
good idea, or in the best interest of amateur radio. All it means is that FCC
enacted the rule.

Was the 55 mph national speed limit a good idea, in the best interests of the
motoring public? The "expert agency" recommended that rule, and it stayed on
the books for decades.
>

The point is that while they consider the beneficial aspect, they are not all
powerful, nor necessarily even that friendly to what is best for amateur radio.
IOW they're stuck with us and we're stuck with them.
>
>> > > There purpose is not to maintain ham radio or decide
>> > > what is good for it.
>> >
>> > I would argue that these are also part of FCC goals
>> > for ham radio or any other service.

Those goals are not necessarily what's best for amateur radio. Was the
re-imposition of "incentive licensing" in 1968 what was best for amateur radio?
FCC (NOT hams!) insisted on it because they said amateur radio of those days
was not meeting the goals FCC thought it should.
>>
>> As stated above read up on the early years of radio and the establishment
>> of the FCC.

And its predecessors, the FRC, DOC and Navy Department. Not pretty.
>
>The initial purpose of the FCC derived from interference
>mitigation.

Not just that - also deciding how to best apportion the spectrum, license requirements, allowable uses of the spectrum, monitoring and enforcement. Indeed, FCC defines what the various services are for! F'rinstance, once upon a time, hams broadcasting music was not illegal.

>The charter of the FCC does not, however,
>forclose consideration of what is or isn't beneficial for any
>individual service.

No, it doesn't. Doesn't mean that the FCC always does what's best for hams. Doesn't mean FCC always makes the best choice or compromise, either.
>
>> We were very lucky that ham radio was allowed to continue to exist

Shoot, propose simultaneously that hams be allowed 50 kilowatts output.
Not that either of these are remedies for the potential problem but
maybe it will help the FCC understand whats going on.

> Why should one be forced to learn to play the piano if what one REALLY
> wants to do is to play one or more OTHER instruments?

Nobody is "forced". Those who want a music degree from a particular
institution may have piano as a requirement for the degree, but they
are not "forced" to learn it unless they are also "forced" to attend
the institution and "forced" to get the degree. The requirements are
set by those who run the institutions, who probably know more about
music than the students.

OTOH, millions of young children today are "forced" to learn how to do
basic arithmetic even though inexpensive calculators have been around
for decades. Even though most professional/commercial/military
arithemtic is done by computers and calculators far faster and with
less error than any human.
>
> Would there be ANY sense in a rule that said "You can't play any other
> instrument, no matter how good you might be at it, unless you first
> demonstrate that you can play the piano proficiently." ???

All depends on who defines "proficiently". The amateur radio code test
we have now is roughly equivalent to being able to pound out a few
bars of "Chopsticks" with two fingers on the piano. Even the old code
tests didn't get much beyond the "Heart and Soul" level, compared to
what was considered proficient by knowledgeable folks.

Would you have a problem with a "Chopsticks" requirement? Because
that's about what we have now.

For comparison, consider the old US Navy Radioman "A" level test, as
given in 1958. Required the copy of 5 symbol coded groups at 24 wpm.
On a standard Navy mill (manual typewriter). For a solid hour, with no
more than 3 errors.
>
> I don't think so ...

Do you play any musical instruments?

--

But hey, we're missing the point here. Why should any musical performance skill be needed to get a music degree, unless a person wants to be a performer? This is the 21st century, and we've got synthesizers out the wazoo that cost far less than, say, a Martin guitar or a Steinway piano. And which are much easier to learn how to use. Why focus so much time and effort on learning a "manual motor skill" to play one instrument - any instrument - when there are machines which will do the job with much less effort and error-free?

This isn't far-fetched. The new contract for musicians who play on Broadway has reduced the size of the orchestra required for a Broadway musical performance, and allows for the use of recorded and synthesized music. (Musicians are a major cost item in Broadway stage prodcutions - or so the producers tell us). Why not go one better and simply use recorded/synthesized music in all long-running shows? The movies have done it for years, although once they used live music. Heck, some folks are even beginning to use synthesized voices rather than singers, as was done in some of the music for the 1997 blockbuster "Titanic". (Celine Dion is a real human, however).

Don't shoot me, I'm not the piano player.

There you go. Lots of roam around space, inexpensive rents and groceries. A code-free HF license.

How many ways are there to be a liar?

> In this case he's an insensitive creep who used a horrific
> tragedy to try and "make a point" about Amateur Radio licensing and
> the "Ham in Space" program.

Being insensitive is called "being insensitive," not lying.

> I am not wrong. His track record of pathological mistruths is
> clear and well documented. In this there is no error.

You are clearly wrong.

Did the shuttle tragedy not occur? Have the astronauts not perished?

> That you so adamantly support and defend him can only mean that
> YOU support lying and insensitivity as legitimate forms of
> communication.

Ahh. I disagree with you and so I now support lying?

Now you're wrong again.

That makes YOU as equally disgusting and foul as
> he...perhaps even more so since his conduct may be due to some mental
> health abboration and yours MUST be a voluntary choice of actions.

Typical liberal tactic.

> No, Brain...

It's "Brian."

> No need for me to "face up to it" here.

But there is. You're delusional, and it's time to get a grip.

Lennie has

That's a whole different argument.

> > with today's demographic,
>
> What IS today's demographic? Do you have a reliable source?

The last data I saw, the average age of US hams was somewhere
in the 60's ... how that's changed in the last couple of years is probably
anyone's guess, since the age data no longer seems to be available,
but I doubt it's come down dramatically.

> >the sad reality is that a large

It seems obvious that you generally can't force anyone to do something
they don't want to do ...

> >> >eliminating Morse testing will help
>
> >> No, it won't. The entry-level license is already code free. Eliminating
> >> Morse testing will not cause more people to want to join.

I disagree. Eliminating Morse testing will remove a barrier to advancement
that many folks find disagreeable ... keep the carrot, eliminate the stick.

> >Many folks are interested in HF access as part of their "portfolio" of
> >capabilities ... the entry level license currently precludes them from
> >HF use ... that is a major disincentive to many.
>
> I disagree 100%, but let's put that aside for a moment.

We obviously disagree. What makes you think that "Many folks are interested
in HF access as part of their 'portfolio' of capabilities." ???
(That the entry level license currently precludes them from HF use is a fact
and
I don't see how you could begin to dispute that.)

> Suppose tomorrow morning, next week or next month, by some method or
another,
> FCC just dumps Element 1 and merges the Tech and Tech Plus licenses. The

with
> SSB and CW. All with a power limitation. Above 30 MHz, though, the entry
level
> license has all privileges. Is that really the best arrangement? Will the
> removal of Element 1 fix that alleged disincentive problem?

I believe so ... getting even a "taste" of HF operation as a Tech will be a
good
thing.

I also believe that many current Techs will upgrade to General rather promptly
once the code test goes away. (some won't, being content with their current
privs, but I believe many will want to extend their privs to HF and will take,
and pass, the General written to get there).

> Or are other changes needed?

Is that supposed to be a "trick question" ???

NCI's "agenda" is to eliminate Morse testing.

I will be there beside you (figuratively), opposing expansion of the
phone bands ... with ONE *possible* exception. With the realignment
of 40m and broadcasting, we will have 7000-7200 exclusive in all
3 regions. It would seem equitable, given the structure of the other
bands, where the CW/data segments and the phone segments are
pretty equal, to shift the phone band lower limit from 7150 (Extra)
down to 7100 ...since the upper 100 kHz from 7200-7300 will
still be trashed by SW broadcast. This is the ONLY *possible*
situation that I can envision where I would consider supporting an
expansion of HF phone bands.

This is my *personal* comment and NOT "NCI policy" ...

In all honesty, unless go in for VERY low power (< 1Watt), the problem is
that you are going to have real problems ensuring that you don't generate
unacceptable levels of spurious emissions. To properly test things to the
standard required nowadays, with today's high density of electronic
equipment in any residential area, you will need test equipment costing much
more than a brand new 'off the shelf' set.
But it is certainly possible to design your own passive circuits, for
instance filters and traps, without this risk being involved.
If you are interested in DX, then a commercially designed receiver is going
to be much more sensitive and selective, of course. This is due to the fact
that a multinational company has the development resources that an
individual could only dream of.
Obviously, you do gain a lot of respect for designing your own circuits, and
you will attract a lot of interest by doing so! So I don't think that 'home
brew' will ever die out in it's entirety! DN

Let us take the natural rainfall over the as symbolic of the hams who would learn and use Morse if they didn't have to. Will the lake fill enough from the rainfall? Or will it slowly evaporate?

In other words, Eliminating the test is like shutting off the inflow to the lake. Rainfall is the people who decide Morse is for them after the test is gone.

Evaporation is the natural attrition rate.

>>Since Morse does take some effort to learn, there is no doubt that
>>less people will take the effort. There will most likely not be enough

Then do your own "recruiting" from those who are interested/willing,
don't rely on the govt. to be your "recruiting agency" by making everyone
pass a Morse test so that you can skim off those who decide to keep the
key instead of tossing it.

> >> >Could *I* become proficient at 20 wpm ... certainly, with enough use

> >> requirement.

Having had to submit to "hazing by Morse" in the past, and even having used
it (and then discarded it), does NOT define how good a ham I may be ...

and it certainly doesn't make me a "better ham" than someone who's never
taken a Morse test or used Morse.

> >

> they apply to decide whether or not to attempt to learn it is a much more
> objective process.

Face it Larry, your product is unattractive to most and hard to sell.
That's not
a reason for a govt. life support system that does your recruiting work for
you.

If you can sell your "product" to enough people, fine ... if not, and you "go out
of business," that's fine with me, too ... just remember, I am NOT trying to "board
up your storefront and confiscate your assets," but it's ALSO not my job (or the
FCC's) to help you "prop up a poor business model, based on an unattractive
product, with govt. subsidies."

> with the USA?

Because they are soverign nations with the right to regulate the use of
the radio spectrum within their jurisdictions as they see fit and according
to their needs, as long as they are not in violation of the ITU Radio
Regulations.

Because most of the rest of the world does it the same way they do
and the US is virtually alone in its sub-band by mode regulations.

Jim ... I realize that your question above was *probably* (at least
partly) tongue in cheek, but it does sort of smack of American
arrogance ... and to some of the other countries in region 2, perhaps
something approaching "Yankee imperialism."

I believe that Bill's comment was tongue in cheek ... it won't fly, because the FCC has a mandate and cannot abdicate its responsibilities.

Besides, if you think Congress suffers "gridlock" on contentious issues, imagine how bad a body of hams would be ... worse than partisan politics, for sure :-(

As entertaining depicitions of the history of ham radio, these may be GREAT
works.

As "models for the future," I think we need to look more forward than
backward.

While I admit that history can be valuable in terms of learning
from past mistakes, so as to avoid similar mistakes in the future, I think
leaning on past events/conditions/etc. too heavily and trying to "keep
things
as they were in 'the good old days' " is a BIG mistake ... a mistake that
too many of us are inclined to make.

Not exactly ... NCI's goal is GLOBAL ... NCI's work is not over
as soon as the US drops Morse testing ... there are a LOT of other
countries.

(Though it's beginning to look like the US will, because of process,
be one of the slower ones to act on the changes adopted by
WRC-03 ... the Swiss hams have already received their letters giving
them HF privs ... the UK will reportedly act before the end of the
month ... and others are lining up ...)

It will be very interesting to watch the dominoes fall ...

Takes longer in some cases. Took me six months of hard work. but so what?

I'll go out on a limb, and say that a person that does not have the
time to learn the material does not have the time for the hobby. Written
or Morse.

That is really what my whole argument is. I don't give a hoot if a
person uses or doesn't use Morse. I really don't. I suck at it. I've got
some physical attributes that make morse code unenjoyable for me.

But I don't like lazy people one little bit. Sorry, but I don't. And
behind all the rhetoric and bluff and bluster, in almost all cases it
boils down to laziness.

Maybe, maybe not. Neither one was a Morse code "fanatic", though...

In the past few days we have a new ham who uses a modified ham rig to send false distress calls on marine frequencies (using a voice mode, btw), and a somewhat more experienced one who shoots and kills a law enforcement officer. Both for no discernable reason.

Really good publicity for amateur radio, huh?

How many engineers do we have to attract to the ARS to make up for those two?

My condolences to the friends and families.

"When help was not forthcoming"......

Law enforcement officer shot and killed in the line of duty but DoD
and FCC "30"professionals aren't able to help out, so volunteer
amateurs have to fill in.

> RACES members provided 494 staff-hours to the operation, most of which were
> contributed during the 36-hour period when radio direction finding
> activites were being conducted.

All volunteer, all free.

> Michigan State Police officials expressed genuine

> now have an "expanded" view of Amateur Radio capabilities.

Thanks for posting, Ryan.
>
> -30-

"30" is a landwire telegraph abbreviation. It evolved into "SK" which
hams use at the end of a QSO, to mean "end of work, no more to
follow".

Wow lots of stuff on Da Code Test, senseless dogmatic regulation that it may or may not be.

So after all the rhetoric --- just take the damn test and meet your goals, achieve me buckos, can do, damn the code test - full speed ahead, be all you can be, perficio -- or cop out and drop out! Or wait a while.

Always bear in mind that your own resolution to succeed is more important than any one thing.
Abraham Lincoln (1809 - 1865)

I think it is assumed that the guy on the other end would
also have more output suds, i.e. 100W would become obsolete.

Nah ... the ridiculous arguments you folks make for keeping a
Morse test requirement just make NCI's job easier :-)

(read the MO&O where the FCC blew away all of the
petitions for reconsideration of dropping the 13 and 20 wpm
tests ... :-)

You're assuming constants in a scene which is loaded with variables.
That's a mistake which has been made many times. Climb out of your
box.

Lotta "ifs" floating around here and neither of us have accurate
crystal balls. But based on obvious current trends and realities plus
the assumption that CW fades over time ('nother big "if") I think it's
quite possible for new digital ops to replace lost CW ops on a
one-for-one basis. In fact when I think about how HF digital
operations are mushrooming it's quite possible that the replacement
rate could very well be higher than one-for-one in the long run.

The huge unknown here is that we have no idea what's around the corner
wrt to the ongoing development of digital modes and how many operators
they will attract as the parade of new digital capabilities show up.

This field is abundantly filled with opportunties for amateur
development work so I sure won't be stupid enough to make any
brick-wall predictions about where digital ops are headed or their
impact in the .000-.150s. Don't start licking yer chops for more phone
space Bill, the fat lady is nowhere in sight the CW aspect completely
aside.

Mike,

Its really NOT my intention to "rub noses in it" ... honest ... if it comes
across that way, I apologize.

What I *am* trying to do is counter the illogical with some logic and
the political/regulatory/technical realities.

Wrong. The fact that the FCC does not allow us to run phone as far
down the bands as the DX does shelters the DX from the U.S. hordes.
That's about as "anti Yankee Imperialism" as it gets in ham radio.

>> demonstrate that you can play the piano proficiently." ???

>But hey, we're missing the point here. Why should any musical
>performance skill be needed to get a music degree, unless a person
>wants to be a performer?

Most conservatories and music degree programs require piano
proficiency no matter what the instrument or specialty (performance,
composing, whatever) is. I got away from that by studying voice
privately, but that's the exception.

>This is the 21st century, and we've got synthesizers out the wazoo
>that cost far less than, say, a Martin guitar or a Steinway piano.
>And which are much easier to learn how to use. Why focus so much
>time and effort on learning a "manual motor >skill" to play one
>instrument - any instrument - when there are machines which will do
>the job with much less effort and error-free?

Effort and error rate aren't the real criteria of music performance.
Creating it by human effort/input is.

>This isn't far-fetched. The new contract for musicians who play on
>Broadway has reduced the size of the orchestra required for a Broadway
>musical performance, and allows for the use of recorded and

>simply use recorded/synthesized music in all long-running shows?

You are really looking forward to a visit from Petrillo's goons,
aren't you ??? James Caesar Petrillo (the Idi Amin of the American
Federation of Musicians) may be dead but his legacy lives on. They
manhandled me when I was a recording engineer in college (mid-1950s)
and I haven't forgotten.

>Heck, some folks are even beginning to use synthesized voices rather
>than singers, as was done in some of the music for the 1997

Brian,

How many heads of Latin American radio regulatory agencies do you
know personally? (If the answer is "None." how can you presume to
know their likely reaction to the US trying to tell them how to do things
in their own country?)

Again, I *presume* that Jim's question was tongue in cheek.

I do know those folks and meet with them several times a year ...
they wouldn't take kindy to being ordered around in the
way that Jim jokes about above ...

>'em." Wherein lies the whole problem.

Agreed. I guess my point was that if BPL interference becomes a
nationwide problem, _lots_ of people in the US will boost their
transmitter power so that they can be heard - *and* they'll be limited
to working stations who can do likewise.

This leads to a rather nasty non-compromise - you'll be limited to
working a much smaller set of stations (e.g. few or no DX, no QRP),
you'll spend a lot more on equipment, *and* your neighbors (BPL-using
and otherwise) will be much more likely to experience harmful
interference.

1910. Switzerland abolishes morse-code requirement

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-18 19:02:36 UTC
From: Markus Baertschi <markus@markus.org>
Message-ID: <MPG.198262bbaaea4759896cd@News.CIS.DFN.DE>
Source record: 71797

I just received a letter from OFCOM (Swiss FCC) informing me about the
following news concerning Swiss HAM's after the WRC03 conference:

- Switzerland will no longer conduct nor require morse code in HAM exams
- All Swiss HAM's with a no-code license are allowed to use all HAM
frequencies with immediate effect.
(This does not concern the 'light' license limited to 2m and 70cm)
- They expect the CEPT conference in autumn to decide for a similar
scheme for all of Europe.

You do.

>
> What I *am* trying to do is counter the illogical with some logic and
> the political/regulatory/technical realities.

You are doomed to failure, because trying to apply logic to this is not
possible.

I look at this and I see lazy people trying to avoid an entry test that
I can't find any good reason to get rid of.

Why? I can't stand lazy people!

Is that logical? Depends on how you look at it, but probably not
logical at all. After all, is it not logical to increase ones worth
(education, toys, wealth, honors, etc.) with a minimum amount of effort?

This of course can be carried to an absurd level if we wish, but let's
not go there for the purposes of this discussion.

Now that does not mean that the other end of the argument is blessed with logic either. Removal of a perfectly good requirement so that those who do not wish to take it don't have to, is not logical either. Morse code harms no one, and is arguably quite useful. The extra effort it takes to learn it is of no consequence for anyone but an unfortunate few who have difficulties picking it up

So what do we have? We have some people who don't like Morse code, and we have some people who do.

No logic applies here. You will fail trying to force fit logic into this situation. All of the PCTA people here are intelligent individuals who just happen to enjoy Morse Code. The NCTA's are also intelligent individuals, most of whom hate Morse code.

But they don't use logic in making that assessment, no matter how hard they try to convince themselves that they are. We can make as many logical statements as we like, but if the initial premise is not logical, then it doesn't matter.

And as for political/regulatory/technical realities, we know them. Nobody thinks that the test will be retained. They are going away. Nothing more real than that. You win. Your illogic beat our illogic.

And I got someone to renew their license after 1.5 years had passed
after expiration.

My current total: 4

1 for me.
2 for new.
1 for renew.

I don't like *genuinely* lazy people either ... it galls me that some
of my hard-earned salary goes to welfare programs that support
the congenitally lazy. (I have NO problem with aid to those who
are genuinely, through no fault of their own, having hard times,
but for a limited period of time, not as a "career.")

But the characterization of all (even most) of the folks who aren't
interested in "jumping through the Morse hoop" is inaccurate and
unfair.

> No logic applies here. You will fail trying to force fit logic into

> who just happen to enjoy Morse Code.

For the most part, yes, but how do you explain Bruce?

> The NCTA's are also intelligent individuals, most of whom hate
> Morse code.

It's not really that I "hate Morse" ...what I *hate* is the fact that
(because)
I ... and others ... have NO interest in EVER using it again, let alone in
becoming proficient at 20 wpm or more, folks tell me ... and others ...
that I am/we are an inferior ham(s) and will NEVER amount to anything
because of that simple reality (ignoring any and all other skills,
knowledge,
or attributes I ... or others ... may have that *could* make me ... or
others ... valuable contributors to the amateur community. THAT's what
I hate and what really gripes my ass.

> But they don't use logic in making that assessment, no matter how hard
> they try to convince themselves that they are. We can make as many

> logical statements as we like, but if the initial premise is not
> logical, then it doesn't matter.

I don't understand how you can assert that it is not logical for someone to resist an unnecessary, unjusitifiable requirement that is imposed on them to gain privileges that have nothing to do with the requirement. And to resist/resent being treated as a lesser ham/person for it ...

I do, however, understand that it is NOT logical for folks to presume that they can insist on forcing such a requirement on the folks refered to in the previous paragraph and not expect them to complain and resist.

At least for US hams, this is America ... where everyone is supposed to be free to do as they please as long as they don't harm others or infringe upon their rights in some way ... the fact that *I* don't want to do Morse doesn't infringe on your right to *do* Morse ...

> And as for political/regulatory/technical realities, we know them.
> Nobody thinks that the test will be retained. They are going away.
> Nothing more real than that. You win. Your illogic beat our illogic.

No, our logic beat your illogic ... no gloating ... we worked hard for it ... our arguments won out in the LOGICAL, well-considered evaluations of the governments of the world.

>That's a whole different argument.

I mean it as a discussion. One of the reasons hams have stuck with technology
such as FM repeaters on dedicated pairs is that except in a few areas there's
no pressing need for more. Also why bands like 222 and above 450 are
underutilized.

For example, one of the things that drove hams to abandon AM and NBFM in the
'50s was the crowding and heterodynes in the 'phone bands when AM was king.
This may be a big reason for the "great giveaway" of late 1952.
>

>> > with today's demographic,

From what source? FCC has been on-again, off-again with the requirement for DOB info.

"average age" tells us very little unless we know how it is determined. Mean? Median? What's the distribution curve look like?

I recall seeing an 11 year old Extra and a 79 year old Advanced talking at FD a few years back. Their "average age" works out to 45...

Of course. But how do you know that young people won't embrace traditions? For many people, the novelty of doing something that isn't mainstream is a big attraction. PCs used to be like that - now they're appliances.

The disagreement is that the code test is a major disincentive to many. It's
just a requirement. However, let's put that aside because it will soon be a
moot point.

>(That the entry level license currently precludes them from HF use is a fact
>and I don't see how you could begin to dispute that.)

I'm not disputing it
>
>> Suppose tomorrow morning, next week or next month, by some method or

>
>I believe so ... getting even a "taste" of HF operation as a Tech will be a
>good thing.

Even if that "taste" consists of nothing but Morse/CW on little parts of four
bands, plus a bit of SSB on a fourth band that will largely be dead as we head
into the sunspot minimum? That's what you're saying - take away the code test
but leave most of the entry-level HF privs as CW/Morse!
>
>I also believe that many current Techs will upgrade to General rather
>promptly
>once the code test goes away. (some won't, being content with their current
>privs, but I believe many will want to extend their privs to HF and will
>take,
>and pass, the General written to get there).

We'll see. I think many won't. Look what happened to existing Tech Pluses - even after three years, the number of Tech Pluses is about half what it was in April 2000. Of those are gone from the Tech Plus numbers, some upgraded, some dropped out, and some were renewed as Techs - even though none of them had to take a code test to get a General, and many didn't even have to take a written test.

Look at how little the Advanced numbers have dropped, even though getting an Extra only takes a written test.

>
>> Or are other changes needed?
>
>Is that supposed to be a "trick question" ???

Nope. The whole artificial above/below 30 MHz thing came about because of S25.5. That's not going to be an issue much longer. Time to take a fresh look at things.

>
>NCI's "agenda" is to eliminate Morse testing.
>
I'm not asking "NCI". I'm asking a wideranging question of anyone who's interested. It's time to look beyond the code test as the only issue on the table, if we're really interested in improving the future of the ARS.

"Brian" wrote ...

When did you become a weatherman? Arnie, I'm well aware of your EMA affiliation. Being a cop, then getting hired to run a local EMA office doesn't make you a weatherman. Passing days old hurricane information is a disservice, not a service under any label you want to put it, professional or hobby. So don't treat your profession as a hobby.

The information you posted is not completely factual. (something I've come to expect from you) I was a US Criminal Investigator for 20 years prior to being appointed as a Federal EMA Director. I have worked in close affiliation with local and Federal EMAs for those 20 years and it was one of the reasons I was qualified for the position. Many EMA Directors come from backgrounds in Federal Law Enforcement and Fire Services and very few from weather services (but you already knew that, didn't you) Finally, I posted the information to my site 30 minutes after the advisory was issued. If that is "days" old then I'd hate to have you say you'll do something for me right away. I could be waiting for months. I've pretty much come to the conclusion that you are nothing but a jerk with an agenda -- hardly worth my time. I will continue posting advisories to this group throughout the hurricane season. Feel free to ignore them -- no sweat off my brow.

Beats going to war for oil every 10 years or so.

Between raising the speed limit and dropping the EPA fleet mileage
requirements, I'd say we worked ourselved into a corner.

"Would you like to biggie size that?"

The big difference is- Myself and their Parents can, and will, controll what they see on the Internet, at the age the children are now, and for a few more years.

However, I have no controll over what is said over the Ham Bands by others, and when the Kids are in the same room, they are gonna hear it, other than to turn the thing off, and disconnect it from the power and antenna, which I did.

Plus, I would like for the Kids to have a choice when they grow up and want high speed access, that I don't have now.

I don't, and I don't agree with you either for that matter.

We all seem to agree that the guy ought to be nailed, and nailed HARD.

But under the heading of "unintended consequences", the notion of requiring a ham to restore a radio to "factory spec" is first probably outside the authority of the FCC. Even if it is within their authority, it is a very troubling precedent to have lurking in background. ARRL has gone to the mat with FCC on matters of far less importance, but they seem to be looking the other way on this one.

Carl, about 3 years ago the PCTA coerced Cecil to come out and play with them on CW. Maybe he thought it would smooth over some of the animosity they had for him. I don't know. It was reported that "A good time was had by all," but the honeymoon lasted only a short while, then they treated him as crappily as ever.

More recently, the PCTA have again tried to coerce their enemies to the amateur bands using, of all things, phone. I'm not sure how that one turned out, but I took a lot of grief for refusing to do so. I think their peace pipe was loaded with date rape drugs.

Even more recently, RV Kelley challenged another poster to meet him on the bands "anywhere, any time." I asked if that's how 14.313 got started.

No good can come from meeting these guys on the air. No point in screwing up another frequency like 3950.

Carl, go easy on them - it's all they had. Logic just wasn't on their side.

What would make the transition nicer is to lose all the sour grapes. Not only haven't these boys learned logic, but good sportsmanship is lost on them as well. Reminds me of the time the Republicans reformed welfare.

>"When help was not forthcoming"......
>
>Law enforcement officer shot and killed in the line of duty but DoD
>and FCC "30"professionals aren't able to help out, so volunteer
>amateurs have to fill in.

Decades ago Cong. John Moss, that era's Billy Tauzin, ripped the FCC a new one for assisting s non-Federal agency in a situation that was not in direct response to a violation of FCC regulations. The fact that the suspect had committed a serious felony (in this case the most serious of felonies) was not an FCC violation because the felony itself did not involve radio communications may have been the thinking. I personally disagree with such thinking, and I lost all respect for Ol' John at that time, but those memories die hard.

Had the MSP situation happened on my watch I would have made sure that someone was out in the field doing something useful. Lord knows - I was the one who was always called out in situations like that.

Jim Bridgewater - the FCC's Detroit District Director - is the only one that has an accurate answer as to why the FCC was not on scene or what the "help was not forthcoming" really meant. It could easily have meant that the MSP called the local office after hours and got no answer, or called the 24-hour Watch Officer in Washington who was not successful in contacting any of the local people right then and there or that they were not available at the time or that the response wouldn't have been fast enough to satisfy the MSP which then said "Oh, the heck with it, never mind".

("Mother, I'd rather do it myself...")

Remember also that the powers-that-be took great pride in gutting the FCC field force over the last ten years. "Privatize everything." The need to use the ARES volunteers is the result of "privatization" of what should have been a heavily-supported government function all along, but was not.

Now everyone is wringing their hands or pointing their fingers over why the FCC can't do the things that it easily did before the Great Rape.

Remember the story of the farmer, the horse, and the oats?

I couldn't even speculate on what DoD was doing or not doing.

Had Larry included "digital" with his cry to preserve CW spectrum, I
would figuratively stand with the both of you as well.

As it stands, all spectrum except the new 5MHz channels are CW
capable. Is it really necessary to keep that much of it CW exclusive?

Personally, I think the amateur bands should be aligned worlwide, with respect to not only frequency, but also mode. If the DX doesn't want to come out and play with Americans or anyone else, I'm sure some other jet-setting hams, dept of state, or UN experts will be happy to fill in the voids for a couple of IRCs or greenstamps.

ditto personal opinion deniability

73, Brian

>
```

BUT, have you ever actually known anyone who has really whined? That has become such a cliche. What I mean is, those of us who do not believe that CW should be a part of requirements for ham licensing are simply exercising the same "rights" we would in any other type of situation in which change is desired. No difference at all.

I have seen people express opinions about CW--on both sides. I would not classify any of them as whining. For instance, you have your opinion behind your desire to have CW remain a part of the ham radio licensure process. The same for me on the opposite side of the fence. Is it either of us that is whining?

It's interesting how, because someone desires something different from another, it is labeled as whining. I sure haven't seen any evidence of whining. I didn't like studying the CW part of the Tech+ license; I don't like using CW; and I don't think CW should be a part of testing.

Is any of that whining?

> >

>

Is that what you would classify as whining? I do not. And, you say that someone who "wants the upgrade privileges without the upgrade work" is a whiner. What if that person actually becomes politically involved in the process and effects change to their--and a potential majority of like-thinkers--way of thinking? What is so whiney(?) about that? I respect anyone who is willing to desire and then who is willing to effect change through our political processes in order to *attempt* to have things their way.

That is still a process in this country--at least for a little while longer.

Yeah. I didn't post this as a joke, either. This guy really used to do it. And, one of the reasons I can't stand HF operation (other than the biggest reason being the hiss) is that when we Tech+'s used to get on and do all the "is this freq in use", etc....all the good operating practices we'd been told were going to be *absolutes* on ham radio--nearly every time there'd be some General or higher licensee who'd get on over us and start calling CQ...or would go just off our freq and begin.

Yep, there were good ones...just as there are good Novices, Techs, and Tech+'s. But, the bad ones ruin it for everyone.

Sure, it's your problem. You have a credibility problem, one which is
compounded by your saying that you've already answered the questions.

You haven't done so and your tale remains vapor.

Texas just had a hurricaine, albeit a fairly normal one.
The station at DPS in Austin was severly limited due to noise in their end.
Why do I point this out?
The noise levels in citites on HF are already so high as to endanger life
and property.
BTW What ever happened to fiber optics?
H.

Well, I don't want to bash 10m as a band but it does seem to attract
some abberant behaviour, and a bit more worldwide than the same that
occurs on 75m and a few selected spots on 20.
Much of the bad behaviour is by CBers faking callsigns - or recent
CB'ers that have become Extras whilst still trying to kick the habit of
being obnoxious.
A shame really, but you are correct in your observations that the bad
ones ruin it for everyone, and if not ruined, it gives everyone else
something to whine about resulting in the appearance that everything is
ruined.
The streets are full of people who piss themselves and fart liberally.
They don't magically disappear when you tune the amateur bands. Thats
what all those tuning knobs are for.

FCC
> enacted the rule.

The original point made was a claim that the FCC doesn't
make rules at all that might be judged as being favorable
or unfavorable for ham radio. Clearly a specific rule may
be detrimental...but that doesn't mean the FCC didn't
or wouldn't weigh its need or benefit in light of what
it does for ham radio.

> Was the 55 mph national speed limit a good idea, in the best interests of
the
> motoring public? The "expert agency" recommended that rule, and it stayed
on
> the books for decades.

Actually, the 55 was the brainchild (I'd call it a nightmare)
of a NJ reprentative who is now deceased. The problem was
the 55 limit had no "sunshine" aspect and that resulted in congress
getting tied up as being anti-safety by the insurance industry
who wanted the 55 limit.

> What's the rest?

Others include need for the service, use, benefit of
the service to the public good, etc.
IF ham radio users truly began to dwindle, do you
doubt that the FCC would consider dropping ham radio
as a service even though there was no coexistence problem?

> >> Read up on the history of the FCC. They were established to regulate
the

radio.
> IOW they're stuck with us and we're stuck with them.

I never said otherwise. My comment was directed at the concept that
the FCC "only" makes decisions based on interference based
issues. You agree that the FCC can and does consider the
beneficial aspect to a service...even if that decision may be
detrimental.

> >> > > There purpose is not to maintain ham radio or decide

The ability to influence those decisions is the same today as
it was in the past. that's what the public input process
is all about.

"Harmful interference" is a specific technical term of art in
communications regulatory law that refers to interruption to a
licensed communications service and places the responsibility to
alleviate the situation on the operation causing the problem.

Your neighbors will experince "unwanted interception" which you
have no obligation to deal with except to make a reasonable amount
of tests to enable the neighbor's repair tech to check the
effectiveness of whatever protective measures they are making to the
affected home electronic/entertainment equipment.

You, OTOH, will receive "harmful interference" from the BPL operation.

Go get 'em, tiger....

>ARRL has gone to the mat with FCC on matters of far less
>importance, but they seem to be looking the other way on this one.

The minute that the bozo operated on a marine channel (VHF Marine Channel 22) he was no longer operating an amateur station - he was operating a transceiver that may have been intended for the amateur market but was modified to do otherwise, i.e. an uncertified and unlicensed marine radio, and he was doing otherwise.

The fact that he held an amateur license is a side issue. He was not cited as an amateur licensee for a Part 97 violation - he was cited as an unlicensed operator for operating a transmitter without authorization therefor.

My gut feeling is that the League does not want to support anything that is (a) a means of clear violation of communication law (remember the caveat about un-widened transceivers in the flap over the receiver section of mobile transceivers capable of being tuned to police frequencies) and (b) a matter that has no direct connection with amateur operations.

But then again, I'm on the outside of the Codfish Curtain, "Volunteer Counsel" notwithstanding.

How would you feel about a licensed amateur who bought a surplus FM broadcast transmitter and put it on the air as a "pirate" FM station, and the FCC required him to take whatever measures necessary to ensure that it would not operate on the FM broadcast band any longer?

Another gut feeling is that the FCC will not jump up and down about a modification made by an amateur operator to any equipment for his/her personal use that (a) does not have the capability of causing harmful interference by increasing the signal leakage level beyond that allowed in Part 15 and (b) does not enable unauthorized out-of-band transmissions and (c) the operator does not intentionally transmit out-of-band without authorization (MARS, CAP, USCG Auxiliary, etc).

The bozo in question failed tests (b) and (c) in the paragraph above.

My Chevy silverado get the same gas mileage today as my
64 Chevy convertible did...about 17mpg. My truck
probably weighs 150% of what the 64 chevy did.

Frankly, "I can't drive 55." Hey, that'd be
a great song title :-)

I assume only what is today. If you want to speculate about
what-if, we could come up with hundreds of "out-of-the-box"
scenarios...BUT, until the FCC initiates a rule making, it's
just an academic excersize.

Why do you assume I even want more phone space?
90% of my home station operations is 6meters
which has plenty of phone space.

Hey...time to get outta the box:-)
The point is that the phone expansion might come not
from within the USA, but rather by virtue of international
"encroachment" of hams into what are now, non-phone
subbands within the USA only.

Cheers,
Bill K2UNK

No, I don't think it is outside of the FCC's authority. They have the power to modify the station license and operator license in just about anyway they see fit.

Get it straight, Dee. This bozo was not operating under the color
of any authorization (station or operator license or blanket rule
authority) and is being treated as such.

The fact that he holds an amateur license authorizing him to operate
on amateur frequencies is meaningless at this stage.

Yes I have. Both in person and on the internet, there have been numerous individuals who simply refuse to upgrade until and unless the requirement goes away. Whether or not it should be part of the licensing is an entirely different issue than refusing to upgrade because one doesn't agree with that requirement. While some may consider that approach to be a protest, it is an ineffective protest as refusing to take the test won't get it eliminated.

No that is not whining because you actually went ahead and took the test. Having studied the basic material, you are now have some background on which to judge whether or not to pursue CW any further.

I have no problem with people working to affect a change through the political process. The ones that I have a problem with are those who would not take time out to pass the code while they work on achieving this change. The process has taken a couple of decades. Who would want to wait that long to upgrade just to avoid the code test? Such people are indeed whiners if they can't take a little time out of their political efforts to pass the code. While I do not agree with those who want to eliminate the code test, if they are operating from a position of having taken the test while they work the political end, they they have my respect. Why? Because the didn't waste decades waiting to get on HF.

As I said before, people who are not interested in upgrading don't bother me. They are getting what they want out of their ham activities.

>
>Carl - wk3c

Carl:

I think so. When you learn the piano, you're dealing with chords virtualy
from the beginning. You learn more about key signatures, time signatures,
and the structure of harmony from learning the piano than you do with any
other instrument. Why do you think virtually all music is composed on
the piano (or modern electronic keyboards)? It is because the piano has
all the basics wrapped up in one instrument which is a bit more difficult
to learn, but does virtually as much as all the others combined. I started
with the clarinet, and quickly moved to the various types of saxophone
and the trombone. I could play the instruments well enough, but I never
had the general background in musical theory that all the piano players
had, regardless of which instrument they were playing at the time.
Therefore, I never became a Real Musician(tm) as a result. Piano is an
essential skill in music, and I firmly believe all musicians should start
on the piano and be tested in piano proficiency before being allowed to
move on to any other instrument -- which will be much easier as a result.

Brian:

I'm all for expanding digital allocations, but I'd take it out of the SSB
side!

>As it stands, all spectrum except the new 5MHz channels are CW
>capable. Is it really necessary to keep that much of it CW exclusive?

How much spectrum is exclusively CW now? Not that terribly much.
I just don't want any of it given over to phone operation, which would
automatically cause it to become an extension of the existing phone
wasteland.

>Personally, I think the amateur bands should be aligned worlwide, with
>respect to not only frequency, but also mode.

Good luck.

>If the DX doesn't want
>to come out and play with Americans or anyone else, I'm sure some
>other jet-setting hams, dept of state, or UN experts will be happy to
>fill in the voids for a couple of IRCs or greenstamps.

Why would the DX *not* want to "come out and play with Americans?"
If they didn't they'd only be hurting themselves.

>ditto personal opinion deniability

I never deny responsibility for my personal opinions. When I "speak" here,
I'm always giving my personal opinions, and not those of my employer,
or the members of any organization to which I may belong. That is
understood, unless I specifically state that I am speaking as a member of
the ARRL or whatever. This goes for you and everyone else in this NG.
Such disclaimers are unnecessary and are usually given as a self-serving
ego stroke.

There will always be some people who pursue their individuals interests to the highest level of which they are capable regardless of the standards in effect. Such people basically aren't worried about meeting a standard but pursuing personal excellence in a field that they are interested in. These are the ones who are and will be responsible for the advances that we have seen and will see in the future. This will continue to occur despite the lowering of standards.

However, the average ability of society will "fall off". Instead of gadgets and gizmos being a convenience, they will become a necessity. The clerk that can't count change without the machine telling him/her is all too common today. They are helpless when the machine breaks down. Lowering the ability of society as a whole is not particularly good for the society.

Read Vipul's posts. Those are about as close to printed whining as you
can get. He continues to post his ARS slurs long after they have been
proven wrong. Otherwise I agree with you that often "disagreement" is
rferred to as whining.

I don't think I need to know them to come to the obvious answer.

> Again, I *presume* that Jim's question was tongue in cheek.
> I do know those folks and meet with them several times a year ...
> they wouldn't take kindy to being ordered around in the
> way that Jim jokes about above ...

I guess. Something maybe. Maybe not.

Moving along here my personal bottom line without knowing a soul below
the border except those I've met on the air: I strongly (VERY
strongly) support retention of the existing xx.150 lower phone band
limits particularly on 20 & 40 primarily because (1) I for one am sick
of the Gringo/Ugly American crappola we've managed to take to the
level of a fine art, the buck needs to stop here at least in ham radio
(2) Downward expansion of the U.S. phone bands would immediately shove
the DX phone ops farther down the band (which they can do with a flick
of the wrist) to get away from U.S. QRM and into the space
traditionally used for CW and digital operations globally. Net gain
for the U.S. phonies comes up zip as far as being able to force
(OhYeah, that's the real agenda) the DX to hear them and the CW and
digital types get screwed (also globally) with orders of magnitudes
more DX SSB QRM than we have now.

Brian's saying that it isn't his problem does not mean that he has no problem. In this case, it only means that he doesn't care to acknowledge it.

Thanks for the clarification, Phil! I'm not sure that the neighbors
will necessarily see it that way, though :-(

> You, OTOH, will receive "harmful interference" from the BPL operation.

I think this is one I'd rather help "head off at the pass" rather than
having to fight a pitched battle on the streets of the city!

light of people who died a horrific death, or a milktoast pantywaist
putz such as yourself who tries to defend him.

But I guess you both fill a need...If it weren't for the callous,
the insensitive and the dishonest, what would we have to gauge the
rest of society by...?!?! We need creeps like the two of you to
appreciate the sensitive, the thoughtful and honest by.

> > I am not wrong. His track record of pathological mistruths is
> > clear and well documented. In this there is no error.
>
> You are clearly wrong.

I am sure you'd like to think so. I am not.

> Did the shuttle tragedy not occur? Have the astronauts not perished?

It did. It does NOT negate the fact that Lennie used it in a
disgusting manner to "make a point" over something completely
unrelated, nor does it negate the fact that he's a documented
pathological liar.

> > That you so adamantly support and defend him can only mean that
> > YOU support lying and insensitivity as legitimate forms of
> > communication.
>
> Ahh. I disagree with you and so I now support lying?

It's not "disagree(ing)" with me, Brain...It's trying to defend
Lennie that does that.

> Now you're wrong again.

Nope. You defend Lennie's use of mistruth and callous
insensitivities. That makes you part-and-parcel of his misdeeds.
Some game of "Follow the Leader" you play, Brain.

> That makes YOU as equally disgusting and foul as
> > he...perhaps even more so since his conduct may be due to some mental
> > health abboration and yours MUST be a voluntary choice of actions.
>
> Typical liberal tactic.

I am quite a long-ways away from being "liberal" anything.

> > No, Brain...
>
> It's "Brian."

Whatever.

> > No need for me to "face up to it" here.
>
> But there is. You're delusional, and it's time to get a grip.

Facts are facts, and the facts are you are trying to defend the
indefensible. Now who's delusional?

> Lennie has
> > created the path he's following.
>
> He would have to be ahead of himself to create that path.

Not when you're just going around in circles. Lennie does that
well. It's one of the few things he DOES do well.

> That you choose to drop in behind
> > him only means you LIKE the stench and the reputation of being
> > associated with a liar and a creep.
>
> Is that what it means?

Fraid so.

> > That's for YOU to "face up to".

> I'm sure you have a nice health plan working as a nurse. Go get some help.

I am not the one defending a documented pathological liar and
insensitive creep. That's your schtick, for whatever reason you feel
it appropriate.

You've shown your colors here, Brain. Thanks for making my point
for me...Again.

Unfortunatly it's not the case.
I seem to recall him being a regular
checkin to one of the so-called
"patriot" nets on 75 Meters.
Specifically, the one that was started
by Steve AA8DP a few years ago
that is of late now defunct.

All for naught in enough cases to render QRO a complete waste Cecil.
The BPL crud is hammering yer rcvr with an S9 signal. It's the bottom
of the cycle. The VK with his two gallons is 10,000 miles away and
maybe an S6 on a good day. No contact.

160m is below the BPL target spectrum so far. Break out those 160m
condo hamburger deck railing-mounted aerials and beat yer brains out
that way. Choices, choices . . .

Oh, gee, what could be worse?

Maybe you need to call in some help to make that big decision. Maybe
they'll help you get back on your meds.

And quit reading Len's posts. They obviously have an ruinous effect
on you.

Nope.

I haven't seen any truthful answers to my questions about your alleged /T5
operations. In fact I haven't seen any answers at all, just evasions such as
"those questions are too hard".

Here they are again:

What callsign was used?
What rigs and antennas were used?
Who did the equipment belong to?
What amateur bands and modes were used?
What countries and continents were worked?
How were the QSLs delivered?

Not really. It's not universal, either.

>... since the "freebanders" operate without any
>regard for the law, why would the allow a Morse test requirement to
>dissuade them ...

I think you meant "why would they allow" - I'll go on that assumption

>they have no licenses to operate any way (and don't
>care to get them) ...

Here's how it works - in theory, anyway:

Most freebanders started out as cb users who then got tired of the limitations of 5 watts and 40 channels. But, having had "a taste of HF", they wanted more - more power, more spectrum, etc. Some became hams. Others looked into the requirements for a ham license, saw the code test, and said 'no thanks". Instead, they began running higher power and on frequencies adjacent to the legal 40 channels.

With the code test gone, it will be a lot easier for folks like that to get ham licenses. Most of them already know enough theory and regs to pass the Technician written. They already have antennas and equipment that will work on 10 meters.

Carl, you have told us repeatedly that you know engineers who would have become hams except for the code test. I think the word was "disincentive". And even after the code test was gone for VHF/UHF, they did not become hams because they wanted HF access.

If that was true for those engineers, why wouldn't it be true for lots of other people?

>This reminds me of the "We'll be over-run by the 'mongrel hordes' from
>the CB bands FUD ... that hasn't happened either.

A lot of today's hams were or are cb users. Most are well behaved, but a few are not.

>Get real.

One of the most-repeated arguments I have heard from the nocodetest folks is that the code test acts as a "barrier" to a ham license for many people who are interested in radio not interested in code. If that is true, why wouldn't it be true for cb users, freebanders and lots of other people?

--

Now maybe, just maybe, the removal of the code test will result in lots of new law-abiding, progressive hams, interested in helping the ARS progress into the 21st century with new modes, new technologies and a new vision of the future. We'll know pretty soon.

The full spectrum, except HF, is a good incentive to get a Ham license.
Probably not all Engineers want or need HF so much that they wouldn't become a
Ham because of a code test.

There is a code free license right now, so probably not.

I fear most concerned Swiss HAM's are in the same situation as I am:
Surprised by the very fast reaction of our office of communication.
While I'm very pleased with the new development I'm now scrambling to
get my hands on some equipment and installing respective antennas. I
hope to be on air this summer, probably on 20M with psk31 or psk63.

I respect your opinion, Dee, but don't understand it. Choosing not to
participate in something one does not agree with is part of the democratic
process. If you don't agree with fishermen netting dolphins, accidentally
or otherwise, refusing to eat fish is committing to a principle. It may not
change a thing in terms of commercial fishing practices, but why would

someone be so dedicated to the idea of not wanting dolphins caught in fishing nets; but then turn around and eat fish--supporting the action so to speak?

That may sound nice and packaged when speaking just to the issue of CW testing in the ham radio licensure process. But, that same principle applied to other areas doesn't work, so why should it for ham radio? And, why should it matter so much? Really. I've got my A+ Certification and my ITIL Foundation Certification. But, I am in no position to "judge" any other A+ or ITIL Foundation Certified folks. On the other hand, I have no experience at all with being a pilot of an airplane...but I know just enough it that I know what pilots are good and what pilots are bad.

As a bystander in ham radio, *some* others are just as able and qualified to "judge" as those who are actually licensed. It takes a thorough knowledge of the R&R, and a supplementary knowledge of common and standardized practices and the culture of ham radio. One need never communicate through a radio to understand and even judge ham radio.

If I know I don't like learning other languages, why would CW be any different? And, if I don't agree that a language should be a part of the testing, then why would I then turn around and take part in something I don't agree with? (Back to my basic point).

I go back to my basic point. Why would/should someone participate in a
process they do not agree with?

>
> The process has taken a couple of decades. Who would want to wait that
long
> to upgrade just to avoid the code test?
>

Why does that matter so much to you, specifically, and to others generally?
That is a personal choice and, along the way, the person may choose to make

some pretty vociferous contributions to the very debate in which they are involved.

> Such people are indeed whiners if
> they can't take a little time out of their political efforts to pass the
> code.

EXCEPT that they have a disagreement with CW being a part of the testing process.

> While I do not agree with those who want to eliminate the code test,
> if they are operating from a position of having taken the test while they
> work the political end, they they have my respect. Why? Because the didn't
> waste decades waiting to get on HF.

I don't think a personal dislike for people who you deem to be wasting time is germane to the importance of a CW test in ham radio. Forgive my density, but I just don't get it. Their choice not to participate in a process for which they disagree is admirable, in my opinion. Just as the folks who came over on ships years ago, to get away from the process they disagreed with.

> As I said before, people who are not interested in upgrading don't bother
> me. They are getting what they want out of their ham activities.
>
> Dee D. Flint, N8UZE

But, you have a personal dislike for what you perceive to be laziness, and you want a federal agency to support that personal dislike. I don't think the US Government should be in the business of supporting personal dislikes--they are close enough to that as it is.

Well, and this is no personal comment on Vipul(?) as I haven't paid much attention to his posting--if someone is wrong, they are wrong. BUT, still in all, if someone disagrees with CW testing and, therefore, chooses not to participate in the process of testing for amateur radio, I see nothing wrong with that and don't consider their protests whining.

In other words, if someone just plain disagrees with the testing and states it as so and has valid responses to "the other side" then I see nothing wrong with it. For goodness' sake, the licensed person could be considered as a whiner, too, right?

Here's an example. Person A is the person who disagrees with the CW licensing issue. Person B is a licensed amateur radio operator.

A: I think that CW testing should be done away with.
B: Why would CW be done away with, when it's been a basic part of the licensing process for a long time?
A: I don't agree that testing for CW proficiency has anything to do with being a good amateur radio operator.
B: But CW is a useful skill to have as an amateur radio operator!
A: There are many modes in ham radio. To focus on one and use it as a testing tool is wrong, in my opinion.

That is the general stance of the CW debate. No one, above, has whined. It is when personal disagreements get involved that it quickly degrades into a senseless and meaningless idiot challenge.

That mundane fact has not stopped MANY
other non-HF licenced individuals from
checking into a "pay-triot" net on weeknights
at 8:00 PM. These people feel their above the law you see.

Let's not also forget the guy using the bootleg
callsign of "kb8biw" that has been checking into
a well-known net for going on for 11 months.

Do a qrz.com search and tell me what you find
on that call...

Makes you wonder what the FCC is doing in
lieu if these (seditious individuals) operation on 75M.

Amateur Radio Newsline™ Report 1353 – July 18, 2003

Amateur Radio Newsline report number 1353 with a release date of Friday, July 18th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

WRC 2003 says no more Morse but it may be years before codefree operation comes to the USA. Find out why on Amateur Radio Newsline report number 1353 coming your way right now.

(Billboard Cart Here)

**

INTRODUCTION

G’day and welcome to the first Amateur Radio Newsline report ever recorded in Australia. I’m this weeks host Graham Kemp, VK4BB, at the Q News studios in the city of Brisbane. And our first story as you might expect has to do with WRC 2003.

**

WRC FALLOUT: S.25 AND A CODEFREE USA

The now concluded World Radiocommunications Conference may have rule that Morse Code is no longer a world standard for getting a high frequency ham license, but don’t expect it to disappear very quickly in the USA. That’s because there’s lots to be done by Congress and the FCC before any action can or will be taken. Our team coverage starts here:

--

I’m Bruce Tennant, K6PZW in Los Angeles.

The International Telecommunication Union has dropped the international requirement that amateurs operating below 30 MHz must first pass a Morse code exam. According to the CQ website, this was among several actions related to amateur radio taken by the World Radiocommunication Conference and reported by the International Amateur Radio Union. The change took effect on July 5.

According to the IARU, the new language of International Radio Regulation Article 25.5 now reads: "Administrations shall determine whether or not a person seeking a license to operate an amateur station shall demonstrate the ability to send and receive texts in Morse code signals."

This leaves the question of requiring a code test optional for each government licensing authority. According to an IARU explanation, several countries still

feel the code is important as a license requirement and wanted to be sure that any country dropping it did so via what it called a positive decision not to require Morse.

In the United States, FCC rules continue to require passage of a 5 word-per-minute code test for access to the amateur bands below 30 MHz, although it is widely expected that opponents of the code requirement will quickly file petitions with the FCC to drop it.

How long will it take? Amateur Radio Newsline's David Black, KB4KCH, has that part of the story from our South East bureau in Birmingham Alabama.

--

Nobody can be quite certain when or even if the Morse requirement will disappear in the United States, but here's the way it has to play out thanks to the way our government works.

Since the agreements reached at WRC '03 are essentially an international treaty, the document has to be ratified by the United States Senate. Depending on their workload, that could happen before years end or it could be put off into the 2004 session or even beyond.

Senate approval has to take place can the FCC begin the process under the Administrative Proceedures Act and issue a Notice of Inquiry. A Notice of Inquirey or N-O-I is the first step in the rule making process to make any change and gives the general public a chance to voice its opinion. And by public we mean every American. Not just ham radio operators.

If there is enough interest shown in going ahead then a Notice of Proposed Rule making will be issued that again invites public comment. This will be followed by another time period for reply comments by those who might have arguments to counter what some initial commenters have to say. Then matter goes to the staff to prepare a Report and Order or Memorandum, Order and Opinion that is circulated to the five Commissioners who run the agency. If they approve, then the change become law on a date specified in the document.

So once again the rhetoric question of how long? Here's our guess. About two years minimum from the time the Senate ratifies the accords, but only if the FCC decides to proceed immediately there after.

Why two years? Well as Fred Maia W5YI of the NCVEC pointed out to us, since Novice Enhancement some two decades ago, just about every major change in the structure of ham radio has taken about two years. Fred is a pretty good Washington watcher and his guess is 2005 at the earliest. But for now, we will all have to just wait and see.

For the Amateur Radio Newsline,. I'm David Black, KB4KCH, reporting. Graham..

--

As we go to air, the ARRL Board of Directors is meeting to discuss the WRC '03 agreement and its impact on the U-S Amateur Service. Next week the

people who give ham radio tests -- the VEC's will be meeting with the FCC to do the same. (IARU, ARRL, CQ, FCC, ARNewsline(tm))

**

WRC FALLOUT: SWITZERLAND GOES 100% NO-CODE

Meantime, Switzerland may be the first country in the world to take advantage of the revised Radio Regulations. According to the website of the Swiss national amateur radio society, the licensing authority there will be writing to all Swiss CEPT Class 2 amateurs to give them "provisional authorization" to immediately start using the High Frequency bands.

Meantime the Radio Society of Great Britain says that nations Radiocommunications Agency has already stated that it will bring in code-free High Frequency licences as soon as it is practical to do so. An announcement will be made as soon as permission is given for United Kingdom Full and Intermediate Class B amateurs to start using the H-F bands. (RSGB)

**

WRC 2003 FALLOUT: IMPROVED EMERGENCY COMMS - WORLDWIDE

Ham radio emergency communications also got a boost at WRC '03. Jeramy Boot, G4NJH, is in Nottingham England with more:

--

Paul Gaskell, G4MWO, the RSGB Radio Communications Voluntary Services National Co-ordinator, has pointed out the enhancements to amateur radio emergency communications that have come about due to the revision of Article 25 of the ITU Radio Regulations.

Article 25.3 now reads: "Amateur stations may be used for transmitting international communications on behalf of third parties only in the case of an emergency or disaster relief. An administration may determine the applicability of this provision to amateur stations under its jurisdiction."

This is a notable change from the old wording, which was: "It is absolutely forbidden for amateur stations to be used for transmitting international communications on behalf of third parties."

Paul says, "A completely new regulation, Article 25.9A, has been approved, a provision which needs no explanation: It reads: 'Administrations are encouraged to take the necessary steps to allow amateur stations to prepare for and meet communication needs in support of disaster relief.'"

It is hoped that administrations will make regulations that facilitate amateurs preparing for emergency situations and providing communications in emergencies and for disaster relief. This was an important IARU objective.

Jeramy Boot, G4NJH

--

Reports from the 2003 World Radio Communications Conference and its impact on Amateur Radio can be found on the IARU website. Its in cyberspace at www.iaru.org. (RSGB)

THE WAR ON TERROR: FCC ESTABLISHES OFFICE OF HOMELAND SECURITY

The FCC has taken another important step in helping to fight the war on terrorism. This as the agency names James Dailey as Director of the its newly established Office of Homeland Security.

Operating under the Enforcement Bureau umbrella the FCC Office of Homeland Security will deal with many emergency related issues including those involving Amateur Radio. It will also oversee the establishment of an Emergency Relocation Board or E-R-B. The E-R-B will deal with the evacuation of FCC headquarters with little or no advance notice as well as overseeing the relocation of selected FCC staff members. More is on the web at: http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-167A1.doc and http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-236436A1.doc (CGC Communicator)

**

RADIO LAW: AB-1228 SIGNED BY GOVERNOR

California hams now have their own PRB-1 “like” protection. This as Governor Gray Davis signs Assembly Bill 1228 on Monday, April 14 th.

Assemblyman Bob Dutton and his staff shepherded the measure through the Local Government Committees and the floors of both houses of the legislature. It eventually passed without a single dissenting vote. The new law officially recognizes the doctrine of Federal preemption as outlined in PRB-1 over Amateur Radio antennas and their support structures as now being California state law.

In his cover letter to the California Legislature, Governor Davis took time to acknowledge the numerous Californians who are licensed amateur radio operators. He said that each year these volunteers give thousands of hours of service to the state and local governments. He added that since the September 11, 2001 attack on America, the state has also have come to rely on them and appreciate their commitment to the security and well being of all those living in the state.

California is the 20th state in the nation to adopt PRB-1 like ham radio anenna legislation. (ARRL SW Div. Bulletin)

**
RESCUE RADIO: RACES VS. FIRES ON THE 4TH
Radio Amateur Civil Emergency Service volunteers acted as dispatchers for the Huntington Beach, California, Fire Operating Center over the July 4th holiday weekend. Operating from the city's Central Net Training Center, eleven members of the towns own Radio Amateur Civil Emergency Service took incoming fireworks related calls from the public, verified addresses, and dispatched the appropriate fire patrol arson investigator teams.
But thats not all. Two communications volunteers were also assigned as spotters on the roof of City Hall. Two other hams got the experience of a lifetime when they lucked out and were attached to the Huntington Beach Police Department eye-in-the-sky helicopter.
Equipped with digital cameras interfaced to two-way ham radio gear, the field team transmitted live slow-scan television images from their lookout locations to the Fire Operating Center and the Huntington Beach Police Department sub-station command post. Glorria Morrison, who is the city's Emergency Services Coordinator said that everyone is proud to have such an extensive network of dedicated and skilled communications volunteers in Huntington Beach. (KH6WZ)
**

RESCUE RADIO: VARACES PULLS OUT OF VA STATE EOC

Meantime, a big change in emergency communications support has taken place in the state of Virginia. Amateur Radio Newsline's Don Wilbanks, AE5DW, has the rest of the story:

--
The tug of war between the independent VARACES Incorporated and the ARRL affiliated Virgina state ARES and RACES group has tipped in favor of the ARRL group. This, according to the latest Repeater Journal that reports VARACES State Emergency Officer Tony Amato, KR4UQ, annouced in March that he and other officers were withdrawing support of operations at the state Emergency Operations Center in the city of Richmond.

VARACES had been providing staffing for the E-O-C since 2001. This following its split from the ARRL after the League's Executive Committee removed Lynn Gahagan, AF4CD, from his post as Virginia Section Manager. Amato, who had been Gahagan's S-E-C cited difficulty in working with the states Department of Emergency Management Operations Director Fred Vincent. Amato claimed that Vincent would not make a clear choice between his group and the ARRL. For his part, Vincent had stated a desire to work with volunteers from both ham radio groups.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW, reporting.

--

Those leaving have been replaced by a ham radio group organized by the local Richmond Amateur Radio Club. (Repeater Journal)

**

OMARC 2003 TECH CLASSES IN SEPTEMBER

Steve Hajducek, N2CKH, says that the The Ocean-Monmouth Amateur Radio Club of New Jersey will again sponsor Amateur Radio Technician theory classes this fall. Classses beginTuesday, September 16th at 6:00pm and will continue through November. All training and testing will be held at the InfoAge Center in Monmouth County, New Jersey. For more information and directions go to www.qsl.net/n2mo on the World Wide Web. (OMARC)

**

NEW FOR HAMS: GLOBAL OVERLAY MAPPER

Tim Makins, EI8IC, in County Roscommon Ireland says that what is perhaps the most comprehensive set of world prefix maps ever assembeled is now freely available. This, in the demonstration version in his new Global Overlay Mapper software.

Makins says that Global Overlay Mapper represents a new concept in the field of maps for radio amateurs. That the software is packed full of features for all Amateur Radio enthusiasts, including seven Continental maps, 27 Sub Continental Maps, country outlines, 2204 maps of major cities C-Q zones, ITU zones, time zones and much more.

The on-line demo-version comes with with two fully featured maps to view. Online purchasing of the whole package is availasble in four major currencies. Download for use on your own computer and try it at www.mapability.com or www.qsl.net/ei8ic (EI8IC)

**

YOUTH RECRUITMENT: SPECIAL OFFER FROM HAMTESTONLINE.COM

The HamTestOnline website has announced its new Youth in Amateur Radio program, which gives eligible school, scouting and youth amateur radio clubs a 50% discount on website subscriptions for students 18 and under.

HamTestOnline says that its offering this discount to support activities aimed at bringing kids into amateur radio such as the ARRL's The Big Project. For more information on the HamTestOnlineT website's Youth in Amateur Radio program, visit www.hamtestonline.com or send an email to K1RV@hamtestonline.com (Press release)

**

FOR YOUR READING PLEASURE: UNDERSTANDING, BUILDING AND USING BALUNS AND UNUNS FROM CQ

If you're interested in how antennas work but don't know an unun from an onion, Understanding, Building & Using Baluns & Ununs from CQ Magazine should be part of your ham radio library.

The new book by Jerry Sevick, W2FMI, is the successor to his earlier work, Building & Using Baluns & Ununs. The new edition includes new tutorial material, designs and explanations of how and why they work. And like its predecessor, this book provides a unique opportunity to learn about the application of these devices to dipoles, Yagis, log periodics, Beverages,

antenna tuners and countless others.

Interested? You can find out more and place your advance order on line at www.cq-amateur-radio.com. Orders may also be placed by phone -- Monday through Friday -- 9 a.m. to 5 p.m. Eastern time at 1-800-853-9797. (CQ)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

**

5 MHZ FOLLOW-UP: OPERATING TRENDS DEVELOP

A follow-up now on what's taking place on the new domestic United States 5 MHz allocation. As reported last week, opening night on July 3rd saw many stations making rapid contacts and cooperating together for an enjoyable operating experience. Now, according to noted High Frequency back-pack operator Bonnie Crystal, KQ6XA, the novelty of the 5 MHz channels has settled down to a usable level for calling and QSO's.

Writing to the q-r-zed dot com website Crystal notes that 5 MHz daytime propagation out to 250 miles is good, although summer noise limits the comfort level when working the 50 Watt domestic stations. Nights bring good D-X and regional propagation, but lightning storms tend to make it harsh in some areas.

But her most important observation is that of a very positive trend. KQ6XA says that hams still are acting like they are on their first date, treating the new channels appropriately and showing off their best operating habits. She says that they are observing the kind of brevity in operating procedures commonly used on a high-level VHF repeater or regional linked F-M system.

Crystal adds her hope that in the future 5 MHz will continue to be an example of the best ham radio good operating techniques and behavior. From listening on the air, many others appear to agree. (qrz.com, ARNewsline (tm))

**

INTERNATIONAL - AUSTRALIA: 5TH ANNUAL IARU REGION 3 ARDF GAMES ANNOUNCED

The IARU Region 3 Amateur Radio Direction Finding Championships will be held Friday, November 28th to Wednesday, December 3rd in Ballarat Australia.

Ballarat is a large provincial city in the state of Victoria. The Victorian ARDF Group, which is organizing the event says that it is expecting up to 100 participants from member societies in IARU Region 3 including Japan, Korea, China, New Zealand, and Australia. Guest competitors from other IARU Regions are also invited to attend in the world-wide Friendship categories.

This years championships are hosted by the Wireless Institute of Australia, with the WIA Victorian Division sponsoring this important event. Full details including competitor and volunteer registration forms can be found in cyberspace at www.ardf.org.au (WIA)

**

AWARDS: WORK A COLORADO MOUNTAIN

Two new awards are now available for ham radio contacts to and from the 14,000-foot mountains of Colorado. The Summit Award is earned by making contact with 10 or more stations operating from the peaks. The companion Pinnacle Award recognizes operation from 14,000 foot summits, requiring radio operation from 5
or more of the peaks.

Award recipients will receive an attractive, colorful certificate with name, call sign and the number of peaks worked or activated on it. A $5 fee is required to cover the cost of the certificate and any associated expenses.

To get yours, first hold the QSO’s and then take your web browser to www.Colorado14erEvent.org. Questions should be directed to Paul Ermisch KB0LUR by e-mail to awards@colorado14erevent.org. And colorado14erevent is all one word. (K0NR)

**

DX

In DX, keep an ear open for GM3PPG stroke P to be active on 160 to 10 meter S-S-B from South Uist through August 8th, including the RSGB IOTA Contest on the 26th and 27th of July. The island counts as EU-010 for the RSGB Istands on the Air awards program. (GB2RS)

And R1PQ will be on the air from the Novaya Zemlya Archipelago through the 25th of July. Activity will be on 40, 20, 15 and 10 meters using CW, SSB, PSK and RTTY. The operation commemorates the British, Russian and American polar convoys between 1941 and 1944 and will have two stations active 24 hours a day. (GB2RS)

**

THAT FINAL ITEM: 73 TO THE W5YI REPORT

And finally this week we pause to bid farewell to a competitor and a friend. This, with word that the W5YI Report ham radio newsletter has ceased publication with it’s July 15th issue. Bill Pasternak, WA6ITF spoke with Fred Maia whose call sign appeared on the famed publication and they reminisced about the past:

--

The W5YI Report was the last of the paper ham radio newsletters delivered by the postal system. At one time there were three. The very first was H-R Report from Ham Radio magazine in 1974. It was eventually taken over by Burt Hicks, WB6MQV and renamed the Westlink Report. Hicks ran it for 13 years

before closing down in January of 1995.

The ARRL Letter came into being in 1981 as a public version of the previously private ARRL Directors Letter. It initially dealt only with matters of interest to League members, but over the years has developed into a high quality publication covering every aspect of the hobby with items of interest to members and non-members alike.

W5YI Report was started by Fred Maia, W5YI in the late 1970's. This, as an information provider to the Richardson Wireless Klub near Dallas Texas. Other hams who saw it asked Fred to make it available to them:

--
Audio only at www.arnewsline.org
--

Initially Fred did not charge for those who supplied him with self addressed stamped envelopes. Eventually his subscription list grew to a point where Fred had thousands of envelopes in his home and the numbers were getting out of hand. So he decided to simplify matters by converting to a paid subscription operation.

--
Audio only at www.arnewsline.org
--

And as soon as word got out that Fred was accepting subscriptions, they came pouring in. And the rest -- as they say -- is history.

In 2000, Fred sold his company that included the newsletter, but agreed to stay on for three more years with the W5YI Report. He set this summer for his departure. July 15th was the publication date he selected and that's now past:

--
Audio only at www.arnewsline.org
--

If you are a paid subscriber to the W5YI Report, fear not. Fred has you covered. He has arranged for the remainder of your subscription to be covered by C-Q Magazine based on the value of the remaining portion of your subscription. And if you already get C-Q, your subscription will be extended by the appropriate number of issues.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, with my longtime ham radio friend Fred Maia, W5YI.

--

And what about Fred? He is not going away by a long shot. To find out what he has planned for his own future and his thoughts on the future of ham radio, be sure to tune into this weeks RAIN Report. Its on-line in streaming audio right now at www.rainreport.com and on the phone at 847-827-7246

OK, fine. If someone doesn't like building their own equipment why on earth
should they be forced to learn all sorts of stuff about how radios work to get
access to modern, reliable manufactured transmitting equipment that has no
critical adjustments and won't go outside the allocated bands? This is a hobby
(for them).

>> It has nothing to do with "Antiquated technology"
>
>I don't think CW can match PSK or TOR, so it is somewhat antiquated, IMHO

In some ways CW beats PSK-31 and the various TOR modes. And the reverse. All
depends on the measure.

>importance, but they seem to be looking the other way on this one.

I see the requirement to return it to factory spec as a plea bargain from outright confiscation/seizure and eventual destruction. I know FCC has done those things in the past.

K2ASP sez the fact that the guy is a ham has no bearing on his marine-band activities. I would point out to m'learned friends that when the accused applied for the ham license and signed the papers, he agreed to abide by *all* FCC regulations, not just those in Part 97.

I don't think modification of factory-made amateur equipment for illegal purposes should be defended by the ARRL.

Wanting HF privileges and refusing to take the code but waiting instead is
just like not wanting dolphins harmed but eating fish. Pariticipation or
non-participation has a different effect depending on what is being
protested.

The principal does work for other areas. Just look at the noticeable number of college graduates who ended up pursuing a career in a field other than that in which they received their degree. And it was generally based on interest sparked by some non-degree course they had to take. People need to be exposed to a broad range of basics. In ham radio, that should include at least a minimal code test.

You have a personal dislike for code and want a federal agency to support your personal dislike.

I do not have a dislike for laziness. If the person is happy being lazy and does not demand things he/she hasn't worked for, that's great. They are probably the happiest people on earth. I will, however, always object to the person who demands what they haven't earned regardless of the field of endeavor.

I respectfully misunderstand, I believe. I don't know what's wrong with wishing or demanding something one has not worked for; it will do them no good in this case since they cannot legally operate amateur radio without a license. I have no problem with someone screaming from the top of the world that they "want" something. They just can't have it until they've met whatever demands there are to have it. If they wish to seek changes to the way of getting something they want, and those changes are made, I have no problem with that.

Same here. I'm a former employee of a government contractor which
manufactured some of the parts for the space shuttle (among other
things). I'm currently employed in civilian commercial aviation.

> A problem with the ordinary public is that they consider space flight

In light of revelations about the more recent of the two shuttle
tradgedies, perhaps it isn't a problem with only the general public.
Seems like there's a possibility that NASA itself got a little too
complacent for its own good.

There's an STS-51J mission patch on the arm of my jacket, which as I write this is hanging on the other side of the table from me in plain view, so if I needed any reminder of the names of the seven who perished aboard Challenger - which I don't - that would be sufficient.

The Challenger astronauts were:

* Gregory B. Jarvis, payload specialist
* Christa McAuliffe, crewmember and "first schoolteacher in space"
* Ronald E. McNair, mission specialist
* Ellison S. Onizuka, mission specialist
* Judith A. Resnik, mission specialist
* Francis R. "Dick" Scobee, shuttle commander
* Michael J. Smith, shuttle pilot

McAuliffe was also to have been the first civilian in space.

I think they *all* knew what the risks were. In my opinion, that doesn't excuse a callous remark like yours at the expense of seven people who gave their lives in the interests of science. Yes, Steve can be a real loose cannon on the decks of RRAP at times. At times, so can you. The origin of the thread is irrelevant. I stand by my original statement regarding your remarks to the effect that an astronaut's ham license remains valid until a space shuttle burns up on reentry, and upon further consideration I will now add that said remarks were in my opinion ill-considered, callous, and disrespectful.

<wk3cqth@wk3c.com> writes:

>I was principal architect of a real, working, commercially mass-produced
>FHSS system ... conceived of, simulated, designed (and have several patents
>on) the modem.

That's great, Carl.

But did you do it all by yourself, or was there a skilled team working with
you?
Did you develop it from start to finish with your own time and money, or did
you have the resources of a big hitech company supporting you?

(These aren't meant as trick questions or a put-down. See below).

>ADAPTIVE FHSS, with Reed-Solomon FEC with interleaving across
>codewords (not that I really think you know what THAT means, but some will),

I do.

>and a number of other interesting features ... the WHOLE thing was much
>simpler than the TAPR FHSS project, and the total BOM (Bill of Materials) for
>TWO complete transceivers was such that the two transceiver system could
>RETAIL for $49.95 ...

Based on amortizing the development and tooling costs over how many units? You
know the old saying..."these things only cost $5 to make, except for the first
one, which cost $5 million"

>I have one at home ... and I have a radio module from the prototypes as
>another souvenier ...

That's great! Hope they gave everyone responsible a bonus, too.

But what is this thing? "Transceiver" covers a lot of area these days - there
are cellphones, cordless phones, wireless LAN devices, RF remote
control/indicators, data transceivers and many more. How many have actually
been sold?

Why didn't you help the TAPR folks out?

My point with all these questions is that what you or others did in the
commercial/professional/military world has little to do with amateur radio
unless the technology actually gets used by hams on the ham bands. Most hams
don't have lots of resources for homebrewing, let alone developing new stuff.

Here's a biggie for ya, Carl: How much of your amateur radio equipment
(receivers, transmitters, transceivers, power amplifiers, power supplies) for

the ham bands below 500 MHz is homebrew? How much is factory built? I'd guess the ratio is probably 10%/90% at best. (Note: Kits don't count as homebrew).

My point is not that there's anything "wrong" with buying instead of building, but simply that if somebody with your experience, knowledge, skills and resources in radio design is buying ham rigs instead of designing and building them from scratch, do you expect the rest of hamdom to be doing anything different?

In large part that's because dependence on the machine has reduced/eliminated
development of the skill. In most stores, employees are REQUIRED to go by what
the machine says.

I don't know about where others are, but in my school district the kids do
learn basic arithmetic. Most of them are good at it, and retain the skill.

But in this age of claculators and computers, why must ALL children be FORCED
to learn basic arithmetic - 'specially given that at least some don't retain
it? And it is FORCED on ALL children.

What about anti-American arrogance?

I think you completely misread what I was saying. Wasn't tongue in cheek at
all, just an opposing idea. Nowhere do I suggest that any sort of coercion be
applied to other countries - why do you read that into my words?

The fact of the matter is that the reason we have limited 'phone bands here in
the USA is twofold: One, to give the DX a place to operate 'phone without
having to deal with Yankee pileups every time they try to operate when the band
is open, and two, to give US hams an incentive to use modes other than 'phone.
Both are good ideas.

Except for Japan, no country in the world has anything like the number of HF
hams as the USA. And most of those Japanese hams are limited to QRP, ans

certain parts of certain HF bands.

2023. Two years?

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-19 22:35:02 UTC
From: Mike Coslo <mcoslo@adelphia.net>
Message-ID: <3F19C79E.1090302@adelphia.net>
Source record: 71861

Reading a report on how long it will likely take for the U.S. to ratify and drop Morse requirements, we are given an estimate of two years.

This leads me to wonder, is it better to wait for those two years to go by before getting ones HF ticket, or is it better to just learn Morse and get the ticket much sooner?

Is a person willing to wait those two years more imterested in the ARS, or is the person who, even if they are not personally interested in Morse Code, yet studies for and passes the test and gets on the air now more interested?

I personally think this is no contest. The person who is willing to get their license sooner shows a greater interest than a person who says "As long as there is requirement X, I am more interested in NOT being in the ARS than I am in being IN the ARS."

Most due to crappy power lines and insulators. Now add BPL with wideband
digital signals and you have a notion of how it will sound.

I have been working with Alabama power for almost 5 years now. Including
the ARRL and the FCC on their ass. And its still not fixed. Wait till
BPL is deployed.

Since our purpose is clear, I don't see that vagueness. For example, one primary purpose is to provide emergency communications. Skills are obviously needed to do that. However, the served agency establishes which skills, not the FCC (one reason the FCC does not require specific training in emergency communications). For example, if a person volunteers to work with the Red Cross, the person needs to know or learn the skills that agency is seeking. If that agency does not handle message traffic or formulate message-grams, those skills are entirely worthless. Therefore, it would be a waste to train all operator in those skills (again, one reason the FCC does not require such training).

If you look at each purpose in the same manner, very little vagueness really exists.

Are you trolling or asking a question?

Personally, I hope the action takes a lot less time. I hold a CSCE for General, and missed Extra by two questions. (Without ever cracking a book.)

I don't care for code, nor feel that I should be forced to learned an outdated mode of communication. If BPL comes to fruition, HF privs will be a mute point, however, CW may be the only mode that works.

As it is, I am responsible for 4 amateur tickets, mine, two other newbies, and one renew. There is another newbie taking their test soon.

Mike, some are leaders, and some are sheople. Baaaaaaa.

Bitch at me all you want, I'm wearing Nomex underwear.

If you read Scott's answer, you'll have something to consider. A couple of folks tested out through extra but missed the Morse. They have 365 days to pass the 5 word per minute code with no other testing, or they can wait. It would appear, since they took and passed (except for code) the extra, that they are going to get that extra regardless of whether the code is retained or dropped. My suggestion is take the theory tests; when you've got that, there is a *ton* of incentive to do whatever it takes. I've heard that some countries are already going to drop the requirements; I don't know if that is true or not. Certainly the requirement will go away; when, I'm not sure. Pass the theory exams and I'll bet anyone will then study and be ready to pass the CW from zero inside of 3 weeks or less :)

If you pass the code test and get it now, then you won't have to face the wrath
of the idiots on this group complaining about your "inferior" license giving
you equal authority to operate as theirs. :-)

Gang,

I've read with some interest (and commented at times) concerning the CW tests. I'd like us all to consider that even a newbie would likely know more about radio and communications than some guy born in 1768 (and, yes, I'm cheating - I'm reading some interesting info out of the Handbook). AM, FM, CW ... all very modern compared to this gentleman. Heck, spark wasn't around then. This guy formulated the relationship between the application of heat to a solid body and its propagation. What does this have to do with radio? The gentleman's name was Joseph Fourier. The laws he wrote (and I now quote from the Radio Amateur's handbook) define the connection between time and frequency domain descriptions of signals. He might not understand radio right away, but as soon as he saw what was being done with DSP, he'd likely be ahead of us all. It is time to get over the CW business. Really. The amateur license is an introduction to electronics and communications. It isn't a professional license, but allows us to learn (and serve in emergencies). I honestly believe it is time to drop the 'holier than thou' attitude and try and attract new blood to this fine hobby of ours. I don't care what class of ticket one holds, we are all licensed amateur operators and all should be respected as such.

The thing is Dee, a CW test is a very odd way to 'earn' HF. I'm not atall
sure that a person has not earned HF just beacause they haven't learnt CW.
Sure, Part 97 might agree with that rather peculiar proposition for the
time being, but it won't much longer.

Hell, it only took two weeks for me to learn 5 wpm code, and I'm bad at
"motor" skills.
(Motor skill is that sort of thing you have to repeatidly practice to
force your brain to
do some new wiring to aquire the skill).

Just learn the damm code..... You just might find it fun, like Larry
did.

Do you think *that* would be a good reason? I want to do something I'm interested in as long as I can. I mean really, do you care what say Larry, Dick, or Jim or even my self think? Two years is just too long to wait. That's the reason why I think a preson would get the ticket sooner.

Gee Jim, there's no need for a truce, the war's over. The PCTA's lost.

As someone said to me, the pro-coders have a responsibility to attract
enough people to survive (paraphrased)

I think the no-coders now have a responsibility to attract the
professionals and good hams that are staying out of the service now, so
that they improve the ARS.

Seriously, if they are right, the holier than thou pro-coders will
vanish into the noise level - figuratively speaking.

> Officers.

But then why was the FCC so hot for more code testing in the 1960s? From the 1930s to the 1960s a ham could get full privs with a 13 wpm code test. Yes, the Extra and its 20 wpm code test was reintroduced in 1951, but then FCC gave all privs to Generals so nobody had to get an Extra for full privileges. And in fact very few did - in 1967, at the dawn of incentive licensing, there were maybe 4000 Extras out of about 250,000 US hams.

At one point (1965), FCC proposed four code tests - 5, 13, 16, and 20 wpm. When the dust settled it took 20 per to get a full privileges. Why was FCC so hopped up on code testing back then?

writes:

>Reading a report on how long it will likely take for the U.S. to ratify
>and drop Morse requirements, we are given an estimate of two years.

Mike,

TWO YEARS?! Who estimates that? I know the wheels of govt. turn slowly, but
that seems like a very long time to get a treaty ratified. I think the FCC will
just dump Element 1 when the treaty changes - they've all but said so.
>
> This leads me to wonder, is it better to wait for those two years to go

>by before getting ones HF ticket, or is it better to just learn Morse
>and get the ticket much sooner?

All depends what a person wants. Some people really want to get on HF/MF,
others aren't in much of a hurry.

>Is a person willing to wait those two years more imterested in the ARS,
>or is the person who, even if they are not personally interested in
>Morse Code, yet studies for and passes the test and gets on the air now
>more interested?

Anybody can be "interested". Some are willing to wait, others are willing to do
what is required now.

Here's an analogy: Remember VCRs first appeared on the market? They were very
expensive and very limited. (The first one I ever saw was about 1974, a Sony
U-Matic.) Lots of people were "interested" - until they saw the price tag.

Then VCRs got less and less expensive, easier to use, and more versatile. At
each level of price decrease, a new market of buyers was reached because people
had what I call a "threshold price". My threshold price for a VCR was $300. Now
you can get a good one for half that.

For an unknown number of people, the code test puts an HF ham license above
their threshold price.

> I personally think this is no contest. The person who is willing to get

>their license sooner shows a greater interest than a person who says "As
>long as there is requirement X, I am more interested in NOT being in the
>ARS than I am in being IN the ARS."

Of course - just like the person who wouldn't buy a VCR when they were $500.

But there's another effect - market saturation. As VCR prices dropped, sales went up and up - then leveled off, because everybody who wanted a VCR already had one. I've seen VCRs for well under $100, but I didn't buy one, because I already have one that works fine and I don't need or have room for another one. No matter what is done to the license requirements, there are only so many people in the world who want to be hams.

It's important to remember that the license is only the first step. It's a bit of work to put a decent HF amateur station on the air, and it can cost some $$ unless you are willing to use old equipment and/or homebrew. For many prospective hams, setting up a station is much more of a challenge/barrier/hurdle than the license test.

We'll see what happens to the ham license "market" when the "price" drops. I say we will see some but not many.

I still think two years is a really high estimate. Unless FCC does the NPRM thing, which I sincerely doubt.

As I recall, the person suggesting that we align ourselves to the rest
of the world's standards was from another country. When Jim retorted,
he was accused of American arrogance. Ohhhhkkkkay, then what was the
first suggestion? Logic? Something that wasn't arrogance, suggested by
someone else, but arrogance if an American suggests it?

Simply Wrong, Carl!

Very good ideas, and if the rest of the world would want to adopt
something like this, it could be cool (not even a suggestion, just a
"hey folks, look what we do")

>Sounds like a personal problem.

Well, it will be for the New Age hams who will not have benefited from
having been exposed to the more comprehensive and challenging licensing
process of the Pre-Restructuring/WRC-03 Era, including Morse code
testing.

>>We used to have that incentive in the
>> Pre-Restructuring
>> Era. Now that it is gone, to rely simply on enticing people to Morse/CW

>> Which doesn't make it any less true.

>Nor does it change the fact that your statement
>is only an opinion.

My statement about future hams having no experience with Morse/CW
is plain FACT, not opinion, Bill. It is also a fact that because of their
lack of experience, they are self-disqualified from having an "opinion"
about the subject.

>> >... folks can be intelligent enough that, with
>> >a modest exposure to Morse through personal contact with other hams,

>> they apply to decide whether or not to attempt to learn it is a much more
>> objective process.
>
>So work te process, be a recruiter for morse.

As has always been the case, the ability of any advocate of Morse code
testing to "recruit" new hams to the mode is limited to relating their
own experience. The new hams will be receptive to his in varying degrees,
yet they will, in fact, not have the same incentive to actually give it a try
that existed under the previous licensing process. In the end, whether or
not they learn it is strictly up to them, as it has always been. The problem
is, in the future, they will still have full HF privileges, so they no longer
have nothing to lose by simply forgoing the whole Morse/CW mode.
They will, however, most likely petition the ARRL and the FCC for more
HF phone allocations -- and where do you think they'll come from?

Fine. That does not mean that the person has no problem. It only means
that the individual chooses to ignore it.

> But, you don't understand
> such things, Dave.... You have a book to live by.

It is precisely because I have a book to live by that I understand such
things. I understand, for example, that this is simply another time
that you've attempted to inject yourself into an issue when you really
have nothing to say.

1) It's not certainly worse than any other reason one can think of.
2) If he reads here, then he escapes their wrath against the "no-code extra."
3) Is my post any worse than anything else that is posted here? :-)

I couldn't care less what our resident ghouls think.... Maybe they should go
start a new newsgroup: rec.radio.amateur.degeneration

I don't think that anybody really cares anymore... All I ever hear here is a
bunch of code bashing, ARRL bashing (and I'm NOT a member or supporter of them
either), a whole bunch of inside jokes and useless posts, and I haven't even
covered the foolishness of such characters as Stewart Tease and his MURS crap.

As long as we're going to end up eliminating the code element from testing, why
not simplify amateur radio licensing even more? There only need be two
classes:
1 - for HF (any and all operation below 30MHz), and
2 - for VHF and above (above 30MHz).
A person can hold both classes (a 1+2 license) if one passed both tests.
Class 2 is NOT a prerequisite for class 1. We could call a 1+2 a class 3
license, but I wanted to demonstrate the independence of each class.

Transitions:
Novice: No credit. Cancelled upon expiration ("upgrade or die").
Technician (no code): Class 2 only.
Technician (w/ HF): Class 2 only. (The code element is worthless)
General, Adv, Extra: Class 1+2.

Pre-1987 Technicians are equivalent to general so they will get a 1+2 license.

Only a class 2 license can be a repeater trustee.... Except for 10m, since repeaters must be above 30MHz, this isn't really a problem. Satellite trusteeship will require a class 1+2 license.

I'm assuming that there will be too much resistance to a SINGLE license class.

Did I say the ARRL should defend the actions of this guy? Damn, Jim,
you were one of the last guys I'd expect to twist my words in such a
dishonest manner.

What I did say was ...

... 1) that the guy got off way too easy,
... 2) but that this particular FCC action smacks of a possible
precedent for denying hams (or certain classes of hams as in Canada)
the right to modify their equipment.

... and K2ASP is excused for rising in defense of his ex-employer, but
he has taken the lawerly approach of not directly addressing my
question, instead raising a diversionary fog about "but the guy wasn't
acting as a ham". So I'll ask a rhetorical question which requires
only a "simple Yes or No"..... "Does FCC have the authority to
require hams to maintain factory built equipment in it's original
state?"

With all kind wishes,

The thing is that happens to be the current requirement regardless of our individual opinions on whether it is peculiar or not. and I know people who have been whining for 10 years waiting for the code requirement to go away. It's rather peculiar that a person would wait that long and miss out on all the operating that they profess to wanting to do.

Yes they do. That would fall under the category of modifying that
individual ham's license. It does not set a precedence. They can put
limits on a specific individual ham as to how, when, and where he can
operate his gear.

There was NO expert agecy involved at all. The NJ rep was a memeber
of congress (house of representatives). I would certainly NOT
call the house an "expert agency."... would you?

BPL isn't however, a desire for another service
to get rid of hams. I agree BPL is a major threat
to all of us, but for different reasons.

It all depends on what you consider important. Some might argue that
not being mechanical isn't any big deal as the need is just not
there. Your mileage may vary.

>It isn't a professional license, but allows us to learn (and serve in
>emergencies). I honestly believe it is time to drop the 'holier than thou'
>attitude and try and attract new blood to this fine hobby of ours.

Jim:

The code/no-code test debate wasn't started by us PCTA's. We only became
PCTA's after enduring the endless whining of those who for a litany of
"reasons," couldn't be bothered to learn the code or be tested for it. It is
all based on the one thing they steadfastly never admitted to -- laziness.
And they all had the same objective in mind -- gaining HF phone privileges
with a minimum of effort. This lack of initiative and motivation also means
that they will not likely be bothered to gain any notable technical skills.
All
they want to do is get a microphone in their hand and talk -- and that's it!

Knowledge of the Morse code gives radio amateurs a uniquely practical,
effective, efficient and universal communications capability. Those who
possess this skill are truly qualified to provide the kind of emergency
backup communications capability which is bandied about so much these
days. And, quite frankly, those who don't possess this skill are simply not
qualified to offer an opinion about it.

>I don't
>care what class of ticket one holds, we are all licensed amateur operators
>and all should be respected as such.

I disagree. The hams of the Post-Restructuring/WRC-03 Era will be less
qualified and capable than those who entered our hobby/service under the
more challenging and comprehensive licensing standards that existed prior
to April 15, 2000. They will exist as hams only at the sufferance of their
Pre-Restructuring/WRC-03 superiors, and will have to prove to US that
they are "full-fledged" hams, either by gaining equivalent Morse/CW
operational capability on their own initiative, or demonstrating clearly
superior technical skills. I am not saying that they should be treated with
disrespect, but they should be aware that they are not in any position to
claim any kind of equality with their Code Era counterparts, and would be
better off not raise the issue -- unless they want to get put squarely in their

place.

I, for one, am not going to condone the dumbing-down of our society in any way, especially in the ARS. I realize that new hams will have no choice but to proceed through the present licensing system, but they will carry the burden of being aware of the history of the ARS licensing requirements, and realize that they are breezing in under a system that no offers no particular challenge and no useful skill development. Whatever they become as hams will be entirely up to them, and for a few decades at least, they will be doing so under the watchful eye of very highly qualified judges.

Mike:

I wonder if the NCTA's will figure out a way to get the FCC to fast-track
this process?

> This leads me to wonder, is it better to wait for those two years to go

>by before getting ones HF ticket, or is it better to just learn Morse
>and get the ticket much sooner?

I learned the hard way. I waited 14 years, and lost out on what could have
been the best years of my ham radio career! Now I'm 50 years old, and
won't even qualify for QCWA membership for another three years!

>Is a person willing to wait those two years more imterested in the ARS,
>or is the person who, even if they are not personally interested in
>Morse Code, yet studies for and passes the test and gets on the air now
>more interested?

Anyone who waits the (up to) two years a US No-code General/Extra
may take would appear to be interested only in being lazy. A classic
filter feeder.

> I personally think this is no contest. The person who is willing to get

>their license sooner shows a greater interest than a person who says "As
>long as there is requirement X, I am more interested in NOT being in the
>ARS than I am in being IN the ARS."

I'll provide them some incentive: As of now, 20 July 2003 at 0321 hrs UTC,
any prospective US ham who learns the code at the gruelling speed of 5
WPM, passes the test, and gets their Extra will be considered by me to
be a full-fledged ham as long as they regularly use at least one non-voice
mode on-the-air at least 40 percent of their total operating time. Wow --
is that a deal or what?

Considering the fact that most people can pass a 5 WPM code test
right after learning basic character recognition (about two weeks' effort
if you take your time), it would be insane to wait two whole years to
get your General- or Extra-class ham ticket. However, a lot of wannabe
hams out there will probably do just that! It's their funeral -- they don't
know what they're missing!

Kim:

I was in the Transportation career field in the Air Force, and while I specialized in Air Transportation for the most part, I've driven everything from Jeeps to tractor-trailers, including just about every category of special purpose vehicle you'll find in the military, with the exception of tanks! I figure I've driven approximately seven times the mileage of an average driver during my lifetime. From August 1996 to June 2000 alone, I estimate I drove over 680,000 miles working for an airport shuttle service here in Dover. In fact, I drove that company's first paying customer, and it's last!

In the Air Force, I dealt with all of the various workcenters you'd find in a typical airport -- Passenger Service, which was my primary specialty, Air Cargo, Special Handling (hazardous cargo including munitions and classified cargo), Fleet Service (ground servicing of aircraft and maintenance of galley, passenger cabin, waste, and potable water systems), Terminal Operations, Squadron Management (training programs, Safety, Security, Logistics Planning, Disaster Preparedness, Facilities Management), and Surface mode transportation (rail, water, truck and pipelines). I've had to know about all of these things and be tested in them in order to advance as quickly as I did through the enlisted rank structure, and at no time did I question any of the knowledge or testing requirements. So, thank you for bringing up the subject, and giving me the opportunity to once again demonstrate how capable, successful people don't shy away from making an effort to learn useful skills.

Larry,

If the BPL raises the noise level enough, it will be the folks running PSK-31 who will get through with signals below the noise level. No offense, CW does do a remarkable job, but some of the digital modes will transmit faster through higher noise levels than CW will (and I did turn in a perfect paper in 1967 at 40 words per minute).

And you refuse to identify these clubs by name. I am sure that is
directly due to the fact that we will then be able to confirm, via
third parties, that you silly assertions are false.

Some of the most prolific QRP, foxhunting and operating clubs are
in the Northeast.

Again, WHY do you insist that these things don't go on when
indeed they are frequent topics of conversation in QST, 73, CQ,
etc...?!?!

Yeah. Even if the register is working, some get confused when, for a
bill of $5.72, I
hand them a ten and a single. "I was hoping to get back a five and some
coins"....

Back in the mid sixties, in grammar school we spent a huge amount of
time on
arithemitic chores like long division. Back then before calculators and
home
computers, it probably made some sense to learn how to do this by hand.
Nowadays, they probably should teach some of this, and also get kids to
be able to make judgements of an answer is wildly wrong, or reasonable
(like did I hit the "x" key when I wanted "+"?).

My grammar school "taught to the test". We had yearly achievement
tests (computer graded multiple choice, somewhat similar to the SAT)
and they wanted good scores. So stuff like creative writing was not taught
(doesn't show on the test). No music either. Anyway, if you had some
wits about yourself, a computer graded arithemitic test with multiple
choice answers is a lot easier than one the teacher grades (if it's an
addition problem, all you need add is the right-most colunm and then
you pick the answer with the matching least significant digit).

I am willing to bet that some sort of "moratorium" on code
testing is announced within the next 60 days. Just an
opinion...nothing certain
>
> This leads me to wonder, is it better to wait for those two years to go
> by before getting ones HF ticket, or is it better to just learn Morse
> and get the ticket much sooner?

Knowing what I know about how much fun I've had with Amateur
Radio all these years, I'd say do it, get it over with and join the
fun! I liken this to a cure for cancer...Would you delay radiation
therapy in the hopes that "the" cure would be forthcoming
"tomorrow"...?!?!

> Is a person willing to wait those two years more imterested in the ARS,
> or is the person who, even if they are not personally interested in
> Morse Code, yet studies for and passes the test and gets on the air now
> more interested?

The only way to answer that is to have experienced it...No one
can speak for you. All >I< can say is that it's been a blast, no
matter WHAT mode I was operating!

> I personally think this is no contest. The person who is willing to get
> their license sooner shows a greater interest than a person who says "As

> ARS than I am in being IN the ARS."

I think you are doing yourself a diservice by that line of
thinking, Mike. Only you can answer that question for yourself, and
anything anyone else can offer (myself included) is nothing more than
opinion or conjecture.

Just pointing out the devaluation of the term "proficiency".

>The point is that there is no NEED for ANY level of Morse
>proficiency any more.

Sure there is. The mode is widely used on the ham bands, and anyone wants to be
a part of that grand game NEEDS to develop Morse proficiency.

Now you may have meant to write:

'The point is that there is no NEED for ANY level of *TEST* for Morse
proficiency any more, IMHO.'

but that's not what you wrote.

Freudian slip?

<wk3cqth@wk3c.com> writes:

>As stated many times before, a ham radio license is NOT a degree or
>certificate of graduation ... it is a "learner's permit."

No, that's not true.

An amateur license, driver's license and a "certificate of graduation" (usually called a diploma) indicate that the holder has met the minimum requirements, as determined by the agency in charge. Doesn't mean the holder is an expert, fully qualified, or that the learning is done. Just that the person is considered permanently qualified to do certain things.

A learner's permit is a temporary, limited license, issued to allow the holder to learn, under the immediate supervision of an experienced person, skills which cannot be learned from a book or class. The holder of a learner's permit is not supposed to stay at that level, but to "graduate" to a permanent license.

Of course learning is a lifelong process, and no radio amateur knows all there is to know about radio or even amateur radio. But a ham license is not a "learner's permit" by any stretch of imagination. In the days when the Novice was extremely limited (distinctive call, xtal control, tiny parts of a few bands, very few modes) and nonrenewable, it might have been considered a learner's permit. But those days are long gone.

And hams expand on them and get FCC enforcement. AFAIK, there's no regulation
about how repeater coordination should be done, such as "two repeaters on the
same pair shall not be closer than X miles where X is determined by...." I
don't even think there is a regulation that all repeaters must be coordinated.

But set up an uncoordinated repeater that causes interference with a
coordinated one and watch what happens.

One thing I forgot to put in previous post:

The peak of the sunspot cycle is past, and we're heading full-tilt into sunspot minimum. Conditions on HF will be quite different than some folks are used to, particularly on the bands above 10 MHz, at night, and in the winter.

So what should the ARRL be doing? Should they be saying "He did a bad thing but you should not make him restore the rig to factory condition"?

AFAIK, there is NO LEGAL USE for the expanded transmit coverage provided by the modification. Modification for illegal purposes isn't what the ARS is about.
>
>... and K2ASP is excused for rising in defense of his ex-employer, but
>he has taken the lawerly approach of not directly addressing my

>only a "simple Yes or No"..... "Does FCC have the authority to
>require hams to maintain factory built equipment in it's original
>state?"

I say "Yes" if the owner of said equipment has demonstrated that he/she cannot be trusted to perform modifications in a responsible manner.

I say the right to modify equipment carries with it the responsibility to do so in accordance with FCC rules and regs.

Thought experiment: Ham buys a Heath SB-220/1 amplifier. Ham modifies same to cover 30 meters and proceeds to use it there, at a power level far above that

authorized. FCC finds out. Does FCC have the power to make ham un-modify it? Or is their only possible action seizure/confiscation and destruction?

I'm 45 and only two years short of QCWA, because I got my no-code licence
back in G-land in 1980. It's a huge irony that I've been a ham longer, not
because I was willing to learn the code, but because I was willing to
compromise and start with a no-code licence! BTW, the QCWA favour
abolition of the code test. Are you sure you want to join?

You gave a G0L__ as your old call, but that's too recent to be 1983, isn't
it?

To besmirch someone because they don't, or wait to, upgrade is quite
ridiculous. What if someone is happy with Tech/Tech+, General, etc.?

My husband is a General, has been for I don't know how long, a few years
anyway. I haven't seen a thing he can do that piques my interest enough to
desire an upgrade to do them. In fact, for the past year at least, the
Yaesu 890FT has been completely disconnected (we remodeled this room and the
radio's just never been hooked back up).

People are not missing anything by not upgrading, if the upgraded privileges
don't provide anything more they wish.

> >

Not to mention that Larry cannot state facts as here, because no one can
predict the future. There's no difference right now with the CW issue than
there ever has been--except that the testing requirement MAY be eliminated
(and I am not so sure anymore).

Under current testing requirements, someone has to be encouraged (or just
have the personal desire) to study CW to pass that part of the requirement.

That desire was either "just there," which was probably in a minimum of persons; or they had to be encouraged by someone. (Larry's probably never encouraged anyone, unless they are gluttons for punishment or like being beat down.) Anyway, so there is no difference now or then in the CW issue from the perspective of "getting people interested in it."

Larry said:
> > As has always been the case, the ability of any advocate of Morse code

> > that existed under the previous licensing process.
>
> Guess you'll just have to accept that.
>

Well, plus that has not changed and any changes to testing requirements will not change it. Which, by the way, proves that having CW testing there for that purpose is not successful in any way.

>
> Agreed.
>

> to overcome in the recruiting process.
>

I think the real issue is that Larry knows he is challenged to encourage anyone to learn and use CW--he's not up for the challenge. I daresay there aren't as many people interested in HF operation as many may think. I just don't think they are. It's much more fun on 2M/70cm, where one can also decide to have a meal with the folks they are talking to. HF is/may be fun for an occasional contest or Field Day, or something like that. But most of us, I bet, get a whole lot more fun outaa local FM chats.

> >
> > They will, however, most likely petition the ARRL and the FCC for more

> Bill K2UNK

>

Cough Yeah, that's probably not a Freudian slip, either. Anyway, as I said, I don't think most people new to the hobby are really all that interested in HF. Of the people I've known new to the hobby since "new" was 1998, very few have disappeared to HF. They all have way too much fun on 2M.

So, don't worry, Larry. Your HF is still and will be quite as it is now. If you find that exciting and interesting, others may not and they don't have to.

Actually, the good test for good manners and courtesy and respect on the air, is the acid test. Every person I have witnessed being in the class the majority calls an "idiot" operator, has soon disappeared from the FM side of ham radio. They get tired of "being encouraged" to talk right, operate right, etc., or they get tired of being ignored. Guess where some have disappeared to?

You got it: HF. They can have a lot more anonymity there, and they have less chance of running into the same people over and over again.

You said you didn't know what was worse with respect to me, so now
you're calling me a "rapist...child molester...spousal abuser...?"

Merely because I think you grossly overreact to each and every post
Len makes?

> > Maybe you need to call in some help to make that big decision. Maybe
> > they'll help you get back on your meds.
>
> You and Lennie keep insisting on this.

Steve, it's the only logical conclusion one could draw from your
insane postings.

I am sure you wish it were
> true,

It obviously is.

but it seems it's your only "defense" against being held up to
> public scrutiny for your own shortcomings.

You are the Avenging Angel of rrap?

> It doesn't work.

Then apparently you have not been diagnosed by a licensed
professional. See if you can get some dealer samples at least.

The problem is that you and Leonard are you own
> worst enemies. The virtual slapping around you take in this forum is

> fueled by your own ramblings.

I think the "slapping around" that I take is from wacko's such as yourself, and it would be forthcoming simply because I disagree with you. Some, such as DICK and Kelly, range from merely curt replies to rude name calling. You're off the scale.

> > And quit reading Len's posts. They obviously have an ruinous effect
> > on you.
>
> I don't tolerate liars, nor do I tolerate the callous and rude.

I don't see you attacking WA8ULX. You believed his story of how he tested for Extra, and he is callous and rude.

> Lennie is all of that, and you "defend" him...So guess where that
> leaves you?

So far, I haven't defended Len. I merely said that you were wrong about the shuttle tragedy. It really did occur. And I've suggested that you refrain from reading Len's posts in the hope that you'll be able to sleep at night.

Now you imply that I'm a rapist...

Get some help.

Kim,

I don't think that you mentioned the
only practical use for CW, today. In
an emergency operation one can use CW
almost as a cipher. If Newsreporters, whom
possess "investigative skills", were to
attempt their intercepts by a scanner,
then they would simply have no
comprehension.

At a EMA ARES training session, the
one of the ARES officials told us
that CW should be considered for
passing of vital information solely
to keep the opsec tight.

Opsec happens to mean Operation Security.
I guess that everyone loves Delta
Force and the terms endeared by SFOD-1D.

At the Boston Marathon I was given
a code key for authentication purposes.

Jim, you're starting to sound like the gun control people.

There is a whole range of actions available to FCC, including a big NAL,
designating license for review, prohibiting use of 30M by this
particular induhvidual, or whatever.

"Radios don't break radio laws, people do."

With all kind wishes,

2093. The myth that BPL is a solution for rural broadband

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-20 15:43:52 UTC
From: robkemp90210@hotmail.com
Message-ID: <6114e4af.0307200743.77d5e419@posting.google.com>
Source record: 71981
Cross-posted to:
rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.shortwave

The claim that BPL is good for rural deployment is yet another myth propagated by the BPL lobbyists. In essence it is bait and switch. The BPL strategy is to get the FCC to allow the high levels of interference / pollution as the FCC is focused on getting broadband to rural communities that don't have it.

In reality, if the BPL lobbyists succeed, they will immediately focus on the wealthy suburban markets that are profitable (and already have cable and DSL) and ignore the rural areas.

DSL can work out to about ~ 16,000 feet from the central office. BPL can only go 2,000 feet from the BPL equivalent of a DSLAM, then BPL needs an expensive repeater installed by a linesman trained to work with 11,000 volt cables. So for a 16,000 foot run 8 BPL repeaters are needed.
At the customer's pole transformer a bridge will need to be installed to couple the signals from the 11,000 volt line to the 110 volt line (imagine what would happen if the bridge failed and your sockets had 11,000 volts!!).

However the math is worked, there is no way they can implement this vast array of expensive equipment in rural areas with any hope of meeting the alleged pricing.

The existing DSL broadband technology is proven and could be provided to almost everyone who has a phone, the barriers are political not technical. The solution to universal broadband lies in ensuring the phone companies serve all of their customers equally. BPL is a broken and polluting technology that is a pure distraction to the objective of universal broadband.

Im not so sure about that. Ive been on PSK31 since late 98 and whenever a
actual carrier, i.e. digital or cw, or whatever gets close on
frequency.....well to put it mildly things go to crap in a handbasket.

With BPL as I understand it you will have multiple TONES being sent down the lines and thus into your receivers. These tones will be received by the PSK31 program and attempted to be decoded.

NO COMPUTER can decode as well as a human ear/brain combination. In CW communications it takes two things to communicate, an operator on both ends.

Along those lines Larry. I became a ham in 1961. By 1964 I was a 'cruit' in the US Air Force and sitting in that wooden building at Lackland with no Air conditioning in JUNE.

They were giving us AFQTs (Air Force Qualification Tests) or something like that...hi. To make a long story short. Because I WAS A LICENSED GENERAL CLASS HAM AND COULD COPY MORSE CODE at 13wpm I WAS IMMEDIATLY QUALIFIED and was given a 3 level straight out of basic. I was assigned as a radio operator without ANY TRAINING AT ALL in my speciality...because I ALREADY HAD IT. Being a Ham, CW QUALIFIED and a MARS member. It helped a lot on that run towards Sergeant.

My amateur radio license was instrumental in getting me employeed after the military in the electronics repair field. In fact my ham license helped me get every single job I ever held.
Can we say the same now a days? I doubt it.

Just trying to reinforce your statements.

No, Dee, "they" could not have "done". The FCC does not have the
authority to confiscate anything, and in any event, radio equipment
that is not smuggled into the United States is not contraband and
is not seizable without a court order or statutory authority.

The bozo (a highly technical term) could have wanted to surrender the
equipment as part of a plea bargain where all other action is
deferred, but it appears from the questions being asked in the
letter that the FCC District Office has a more substantial penalty
in mind. This is just the first step.

> And you refuse to identify these clubs by name. I am sure that is
>directly due to the fact that we will then be able to confirm, via
>third parties, that you silly assertions are false.

I went to a Ham club in CT yesterday. I know, failure results from doing the same things that didn't work before, but it was a "new" type of club. It was the VHF/UHF/Microwave club in CT. Between the DXpedition and this event, I will skeptical of any Ham Radio event from now on.

Lots of homebrewed microwave stuff. And they supposedly did Minimum Signal Testing, although I didn't stick around to verify this.

I found the Ham culture similar to other clubs, however. Mostly talking about Ham stuff. Some technical talk about their setup. However, the technical person would feel out of place there. A few talked about the people they contacted. A few were happy to include others. Most of them were not. They seemed to contact people through the radio, but not in person.

About 20+ people were there. More were showing up, but I didn't say long. Also, it was 100% male. About half were old and about 75% were overweight. Not that there is anything wrong with that. There just seems to be a correlation in Ham Radio demographics. What is is about Ham radio that makes you want to eat alot? Surprising, Ham Radio brings in few females.

>Again, WHY do you insist that these things don't go on when
>indeed they are frequent topics of conversation in QST, 73, CQ,
>etc...?!?!

I cant find any, despite my best effort. Lets face it, Hams are anti-social males. Significant percentages are overweight and older. Most do not like the technical aspect, either. You'll find that at any random Ham Radio gathering or event.

With all due respect, William (or is it Bill), seems that deliberately coding/encrypting on the amateur bands is contrary to the R&R, if ya know what I mean. And, it also seems to me that any reporter with really good investigative skills would be well aware of your scenario, above.

However, CW is definitely a practical skill, and a needed one, in EmCom. I've never, ever disputed that. And, I encouraged openings and training for CW whenever I have been in a position of leadership in the EmCom world. I've also encouraged and trained with openings to HF, etc. The only thing we never were able to accommodate is SSTV and ATV. We had every other check-in. We would call from FM (2M *AND* 70cm) to the net participants we knew had HF points. They would call to all net participants on all bands we could cover at any particular training net; then those individuals would relay to CW for any CW net participants. Then it would all be relayed back into the 2M/70cm nets. What would have happened "in an actual emergency" (GRIN), was all FM operations would have then become tactical with local Emergency Services; and we--as amateur radio operators--would "set up" the rest of the operations, as needed, for net operations.

The goal was to have all H&W set up and operating via relay (on different freqs than the local operation freqs) from FM to HF/CW capability. We also had PSK ops in that arena. For "relief" portions of the net (those ops that would be looking for food and refreshment, extra batteries, more equipment, more cars, chainsaws...what-have-you) was relayed from FM to FM capable hams that also had FRS/GMRS, etc. They would relay those ops needs out to non-hams (we called it the auxilliary service) and that included, by the way, anyone who needed babysitters, animals fed, home needs. It was our desire to have as much of the community/families involved as we could--regardless of their amateur radio license status.

>
> At a EMA ARES training session, the

> passing of vital information solely
> to keep the opsec tight.
>

I understand the concept, and I know that in an emergency the R&R may very well go out the window--as you know, all that is debatable. BUT, that given, there are ways to handle sensitive information by using other means than CW; although CW is a fine choice also!

>
> Opsec happens to mean Operation Security.
> I guess that everyone loves Delta
> Force and the terms endeared by SFOD-1D.
>

We were "aware" of any lingo that might be used by our served agencies (that was also done and learned by actually visiting the served agencies and seeing/learning how they operate). However, on the support ops part of the net--we didn't get into using all that fancy stuff, we pretty much used plain language.

Morse code as a cure for cancer or cause of cancer, whats the difference. If you smoke cigarettes, you know its bad for you, but its enjoyable so you keep doing it.

>I'd say do it, get it over with and join the
>fun!

Yes, Morse code is fun, I guess. Its good to have as many people as possible using Morse code.

I don't want a test requirement for Morse code. I won't use Morse code, but I want others to use Morse code.

Whenever I used to bootleg--and I did before I was licensed, I always made extra sure to stay out of ham radio frequencies--most hams know too much about R&R and DFing. ;) I won't do it now but only because I don't want to compromise my license. Well, along with the fact that now I realize what an idiot I was being.

You repeatedly misconstrue what people are saying. None of us ridicules or besmirches the person who does not upgrade because they have no interest in the privileges of the higher class. They have achieved their personal goals regarding ham radio and found their niche. What we oppose is the person that wants the privileges of the higher class but refuses to do the work to get them. I know some people that want to be a general but not only have they been waiting for years for the elimination of the code test but have refuses to even try.

Brain, there is noting "logical" about lying and callous
indiscretion that you and your buddy favor. Your other attempts to
twist what was clearly said in archived posts is likewise illogical.

> I am sure you wish it were
> > true,
>
> It obviously is.

To you, perhaps. But then it seems it's just you and Lennie in
one corner and everyone else in the other. Even those who also favor
your basic views on Code testing do their best to distance themselves
from you and Lennie.

Don't you wonder why?

> but it seems it's your only "defense" against being held up to
> > public scrutiny for your own shortcomings.
>
> You are the Avenging Angel of rrap?

Do YOU think I am? Then I must be. Otherwise, I am just another Amateur licensee who doesn't like some lookie-loo making irresponsible and untruthful statements about something of which I have first hand knowledge.

> > It doesn't work.
>
> Then apparently you have not been diagnosed by a licensed
> professional. See if you can get some dealer samples at least.

There's nothing to be "diagnosed", Brain.

Other than my unwillingness to let go of Lennie's tail, no one can argue with the validity of MY statements, nor can they deny the arrogance and inaccuracies of Lennie's...And yours, for that matter.

> The problem is that you and Leonard are you own
> > worst enemies. The virtual slapping around you take in this forum is
> > fueled by your own ramblings.
>
> I think the "slapping around" that I take is from wacko's such as
> yourself, and it would be forthcoming simply because I disagree with
> you. Some, such as DICK and Kelly, range from merely curt replies to
> rude name calling. You're off the scale.

I am sure you think I am. But then you also can't delineate the difference between "authorization" and "acceptance", nor can you validate any of the assertions you've made vis-a-vis your "credit" as a "DX" operator.

Many people here disagree with me, and I they...but the basic fiber of the exchanges don't degrade to this point because we can agree to disagree. You and Lennie can't/won't do that.

> > > And quit reading Len's posts. They obviously have an ruinous effect
> > > on you.
> >
> > I don't tolerate liars, nor do I tolerate the callous and rude.
>
> I don't see you attacking WA8ULX. You believed his story of how he
> tested for Extra, and he is callous and rude.

Brucie is in the killfile. Brucie is KNOWN to suffer various mental abborations, and his rantings are so childish and idiotic that they are clearly that to even the casual reader. He's an idiot-bar-none, always was, always will be.

> > Lennie is all of that, and you "defend" him...So guess where that
> > leaves you?

>
> So far, I haven't defended Len...(SNIP)

Sure you have. Read back the last 15 messages in this thread
alone.

> I merely said that you were wrong
> about the shuttle tragedy. It really did occur.

Sure it did. But you have somehow insinuated that by having
identified Lennie as a liar I am saying he lies about this. I did
not. I said he's a callous, insensitive creep. This was but yet one
more a-burke-tion of what was said in order to create a fight in which
you fancy yourself as being on top.

> And I've suggested
> that you refrain from reading Len's posts in the hope that you'll be
> able to sleep at night.

Under FCC rules there is NOTHING ILLEGAL about modifying an amateur
radio transmitter. NOTHING. ZIPPO. NADA!

The *illegal* part of this incident lies in the *USE*.

I'm not here to defend this guy for USING his radio in the manner he
did, nor did I ever suggest the ARRL should defend his illegal use of
the radio, but they damn well SHOULD defend our existing privelege of
tinkering and modifying our equipment, as mandated by 97.1(b) of the
Commissions Rules.

"Modified radios don't break the rules, people do."

Actually it is a modification of the station license aspect of a ham license. You do know of course that our ham licenses are combination operator license and station license. It was not so long ago (although before I was into ham radio), that the license was actually a two part document, one part for the operator license and one part for the station license. You had to notify the FCC if you planned to operate from any location other than that listed on the station license. So, they have told this ham that he must return the unit to factory specs. This unit is his station and this constitutes a modification of his station license whether or not it is explicitly stated. Thus it is within the FCC's authority to do so.

They could have seized it as part of the "evidence" for an investigation
though. It would take them only a few hours (if that) to get the
appropriate warrant.

So what do you plan to do to recruit people to Morse code. If want others to use it, you have the responsibility to get actively involved one way or another to get people into Morse code.

I don't know what's driving your sniping, Kim. I operate phone, CW,
RTTY and FM on the bands and frequencies of my choice from any of those
made available by the FCC.

You've told us that you aren't operating at all.

No, I was givin a three level right out of basic. Did not attend any tech
school at all. When I arrived at Lockbourn in Ohio I was given my first
stripe and assigned as a 29330 and given a shift at the SAC Fast Talk radio
facility on base. In a very short time I passed my 5 level and was awarded
a 29350 and my next stripe as soon as I had my required Time in Grade.

>
> >
> > My amateur radio license was instrumental in getting me employeed after

> Not your prior radio operator experience in the military?

Not really. I did very little actual maintenance in the military because my speciality was OPERATIONS. However I kept learning and teaching myself electronics as I went along. I am self taught all the way. Including in ELECTRONICS.

And I totally credit my interest in HAM RADIO as the reason and source of my inspiration to advance.

Not to mention the fact that in order to stay on the air I had to learn how to fix that dang equipment.

I wouldnt know Kim. I am just telling you how it USED TO BE when a person had a ham license. How it USED TO MEAN SOMETHING.

When I got into this Amateur Radio was so respected that it actually opened doors for you. Not anymore. Thanks for helping dumb it down.

Your not going to belittle those that went before you. We don't have a damn thing to prove to you or those of your ilk.
We know, we have been there and got the tee shirt. Now pick up your jaw and commence to run off at the mouth little girl.

I have several friends in the "corn & wheat belt" of
Iowa and Nebraska. (I broker farm equipment)
All of them have internet access, either via traditonal
dialup or some who have DSL via telco fibre taps
in the trunks that run btwn the cities. Wireless BPL
would not be a seller. (one enterprising customer
in Ohio I know has set up his own wireless LAN that
covers a good chunk of his 4000 acre farm. He can
surf the web on his laptop while inside the cab of
his aftermarket A/C equipped John Deere 9000
Series Combine

> In reality, if the BPL lobbyists succeed, they will immediately focus
> on the wealthy suburban markets that are profitable (and already have
> cable and DSL) and ignore the rural areas.

Very true! Suburban customer and the VERY lucrative
College Campus market(s) are the real target
of this technology.

> The existing DSL broadband technology is proven and could be provided
> to almost everyone who has a phone, the barriers are political not
> technical. The solution to universal broadband lies in ensuring the

> and polluting technology that is a pure distraction to the objective
> of universal broadband.

The problem is there is one person at the FCC who
has known connections and investments into numerous
telecom corporations. His name is Michael Powell.
Get the big picture? Powell is to the FCC, what Murdoc
is to mass media.....

For an example of what I mean, go to the link below for more info :

Kim, you are forever the optimist. I've been reading his posts since
about '95, and he hasn't come up with one yet. I'm not so sure if
he's incapable, or if he's worried that he'll taint that "Stubborn
Missouri Mule" image that he's developed over the years and tears. In
any case, he just ain't right.

>No, that's not true.

Hello? It IS "true," but in a virtual way.

All that the US amateur radio license is is a grant from the US government
civil radio regulating agency stating that the grantee is entitled to
operate
according to US amateur radio regulations.

>An amateur license, driver's license and a "certificate of graduation"
(usually
>called a diploma) indicate that the holder has met the minimum requirements,
as
>determined by the agency in charge. Doesn't mean the holder is an expert,
fully
>qualified, or that the learning is done. Just that the person is considered
>permanently qualified to do certain things.

How about a gun permit or a hunting or fishing license? :-)

I'd strike the word "permanently" to be fully accurate, but you MUST
argue about such...and your win-all-rounds-at-all-costs hat must be
on this week. :-)

If you don't RENEW your ham license within the total 12 year period
from last renewal of first test you do NOT have any "permanent"
qualification. None. Zip. Nada. Byeeee....

>A learner's permit is a temporary, limited license, issued to allow the holder
>to learn, under the immediate supervision of an experienced person, skills
>which cannot be learned from a book or class. The holder of a learner's permit
>is not supposed to stay at that level, but to "graduate" to a permanent
>license.

Well, YOU don't have ANY sort of "learner's permit," do you? :-)

>Of course learning is a lifelong process, and no radio amateur knows all
>there is to know about radio or even amateur radio.

You don't?!? :-)

That seems very inconsistent.

>But a ham license is not a
>"learner's permit" by any stretch of imagination.

Nope. When you got yours, you were a fully qualified extra special
something or other, able to leap tall pileups at the stroke of a key.

> In the days when the Novice
>was extremely limited (distinctive call, xtal control, tiny parts of a few
>bands, very few modes) and nonrenewable, it might have been considered a
>learner's permit. But those days are long gone.

Somebody opened the door at the back of the bus.

Some of the lower-caste escaped. Perhaps they were looking for
drinking fountains without signs on them.

>attribute those advances to...if not the new generation
>of students graduating from our schools?

Invention of the transistor - 1947 by Bardeen, Brattain, and Shockley.

Invention of the integrated circuit - by Jack Kilby during a Texas
Instruments plant-wide vacation period when he was a new hire and
hadn't earned any vacation leave.

The cellular telephone was a US invention, a marriage of a handheld
radio (first by Motorola) and the US telephone system (a host of new
inventions all by itself).

The invention of the first microprocessor (Intel, up in Silicon Gulch)
opened the way for the modern PC...and all sorts of things from a
$40 lawn-sprinkler controller to a fully-automated cashier-receipt
maker-stock totalizer computer system in supermarkets.

The LED and LCD and TFT flat-screen display are all US inventions.

Both the space shuttle and the bikini swimsuit are inventions from
Southern California. :-)

"Lower standards?" Hmmm...in 2003 there is still a requirement for
demonstrated morse code skill to obtain two of the three US radio
amateur licenses. Morse code was first used commercially in
1844...in the USA. Seems like that "standard" has been inflexibly
kept for about 91 years in amateur radio!

>This may be a big reason for the "great giveaway" of late 1952.

"AM?!?" All along you've insisted that US hams had SSB in the 1950s!

>Perception can be quite different from reality. Unless we have the entire
>database or a truly representative sample, impressions are misleading.

Tsk, tsk, tsk...you keep interpreting your database info and claiming it
is THE interpretation. Are you saying you are now MISLEADING
everyone?!?

>>> Actually, the younger generation first has to know ham radio even exists.
>>
>>This is true ...
>
>Something we gotta fix.

Why? Is it broke? No sense "fixing" something if it ain't broken. :-)

>Of course. But how do you know that young people won't embrace traditions?
>For many people, the novelty of doing something that isn't mainstream is a big
>attraction. PCs used to be like that - now they're appliances.

Radio stations in homes were once new and interesting. Around 1935
or so. Now, HF transceivers are just appliances.

1935 was, oh, around SIXTY-EIGHT YEARS AGO. :-)

>>We obviously disagree. What makes you think that "Many folks are interested
>>in HF access as part of their 'portfolio' of capabilities." ???
>
>The disagreement is that the code test is a major disincentive to many. It's
>just a requirement. However, let's put that aside because it will soon be a
>moot point.

No, no!! Say it isn't so! You've reiterated that a morse code test is
NECESSARY because so many hams around the world use morse
code! Don't tell us you've changed your mind?!?!

>Nope. The whole artificial above/below 30 MHz thing came about because of
>S25.5. That's not going to be an issue much longer. Time to take a fresh look
>at things.

A "fresh look?!?" Good grief.

Definitely a change of mind. Reverend Jim must have found a new stash.

>>NCI's "agenda" is to eliminate Morse testing.
>>
>I'm not asking "NCI".

Sorry, you are blatantly addressing Carl and NCI.

>I'm asking a wideranging question of anyone who's
>interested. It's time to look beyond the code test as the only issue on the
>table, if we're really interested in improving the future of the ARS.

Then apply for a staff position at ARRL. Remember, Dave Sumner will
retire eventually...there's your CHANCE at becoming Executive
Director For Life! :-)

Until then, test element 1 is still in Part 97. The fat lady hasn't sung.
It ain't over in here yet until test element goes away.

When
>the dust settled it took 20 per to get a full privileges. Why was FCC so
hopped
>up on code testing back then?

Intense lobbying by the ARRL?

1965 is THIRTY-EIGHT YEARS AGO, Reverend Jim. No Internet then and Washington, DC, was a far place to get to and communicate by paper. Hams in the USA rarely wrote to the FCC for anything...

THIRTY-EIGHT YEARS AGO there was still some morse code used in various radio services AS a communications medium even though it was waning then. Ham radio long-timers made up the bulk of ARRL membership and those long-timers insisted that morse code skills were "essential" to amateur radio.

THIRTY-EIGHT YEARS AGO the Class D CB had already been a fact for 7 years and the FCC had changed the CB callsigns.

THIRTY-EIGHT YEARS AGO hams in the USA were still buying and operating US-made HF radio equipment. The influx of off-shore designed and made ham equipment had not yet started.

THIRTY-EIGHT YEARS AGO the solid-state era in all of electronics was just starting...integrated circuits were expensive and limited in kind and quantity. The microprocessor was on the drawing boards and the home personal computer essentially non-existant.

THIRTY-EIGHT YEARS AGO the average long-timer US ham probably got started around 1935. He (almost always male) was thoroughly ingrained in the 1930s' standards and practices of ham radio.

Try not to live in the past so much.

>Did they "test" you for your actual proficiency level encoding and decoding
>CW? I'd hope they did.

Disregarding USAF jargon such as "3 level," I'd say they should have.
US Army did it for the old Field Radio MOS at the time...and few
formerly-civilian morsemen could cut the Army requirements. :-)

>> I was assigned as a radio
>> operator without ANY TRAINING AT ALL in my speciality...because I ALREADY
>> HAD IT. Being a Ham, CW QUALIFIED and a MARS member. It helped a lot on
>> that run towards Sergeant.
>
>But still, they did give you some kind of test, right?

Tsk, tsk, the US Army was fussier. Us recruits got placement testing into
an Army branch prior to Basic training, but that was it.

I wasn't any licensed radio op going in, certainly with no morse code
experience, and wound up in Microwave Radio Relay school at Fort
Monmouth. No particular Tests there although we had some short ones
periodically. Instructors (all GIs themselves) at that time had discretion
on who would pass and who would be reassigned.

I made E-5 (NCO, not Specialist) in a year and a half after being
assigned to ADA Transmitters; Army froze rank advancement during
school periods at the time. Absolutely NO "tests" of the formal or
written kind at ADA.

>> My amateur radio license was instrumental in getting me employeed after the
>> military in the electronics repair field.
>

>Not your prior radio operator experience in the military?

"Getting employed" at any given time depends on Who Is Hiring, and
where. :-)

It's usually a matter of keeping ones eyes/ears open and grabbing for
opportunities as they arise. I got jobs at three radio stations and one
TV station in 1956 after testing and being granted a First Phone. None
of my previous military experience had any direct bearing on "riding gain"
or operating a video switcher...just tuning tube type transmitters of high
power. Shrug.

In the fall of 1956 I was determined to go to Art Schools in either the
southeast or southwest sunbelt areas. Hughes Aircraft Co. had hiring
teams at major cities and one such hired me as a Senior Tech in
Environmental Testing Lab at the HAC El Segundo plant...in Chicago.
Zero environmental test experience, except being in hot and cold
weather. :-)

In each and every one of my personal experiences, everything about a
job was a learning experience and I learned as much as I could. Not
formal classroom learning, but on-the-job practicalities which were
reinforced by off-work study to find out Why certain things were done.
All was so interesting that I switched from art (illustrator) to engineering
and never regretted doing so.

>> In fact my ham license helped me
>> get every single job I ever held.
>> Can we say the same now a days? I doubt it.
>
>Yeah, my former Girl Scouting and Girl Scout Leadership experience has been
>a point of discussion when I interview. It's easy to impress anyone on the
>outside of something, isn't it? ;)

Heh heh heh.

If Personnel Departments have the "upper hand" in hiring folks, they WILL
be Credentialists looking for all the wonderful certificates and degrees
with attendant Rank therein. Pretty paper is extremely important to the
Human Resources (PC term for Personnel) folks...makes their decision-
making tasks much, much easier.

In Southern California Aerospace industry, engineering departments have
the FINAL say in who gets hired and who doesn't...and the engineers
within those departments have to do the final interviews. They WILL
find out who is REALLY qualified and who isn't, degree or not. That
method works very well indeed and was responsible for my long, long
route on getting a fancy piece of paper announcing I was "qualified" to
do something I'd already QUALIFIED in for two decades previous. :-)

Folks who are INTO their hobby too deep seem to confuse the
differences between recreation and occupation. The "need" for
morsemen evaporated to a minor level worldwide at least three decades

ago but amateurs still insist it is a terrible "need" to be "qualified" to operate an HF transmitter. :-) Shrug.

In article <5c01b95b.0307180801.29ef89@posting.google.com>, k4yz@aol.com (Steve Robeson, K4CAP) writes:

>Does anyone know of a source for the mil-spec type handsets like the
>one that appears in many of the SGC ads? SGC sells them as
>accessories, but for well-over $375.
>
> Any help would be deeply appreciated.

Fair Radio Sales. See also www.fairradio.com, search for "handsets"

They currently list the H-33 (PTT) handset at $17.50 plus shipping.
The H-33 was (probably) the first of the skinny military handsets that
could slide the earpiece under the helmet in use. It was common
with AN/PRC-6 to PRC-12s during the active Korean War.

The H-250 (PTT) handset is $18.00 plus shipping. The H-250 was
used with the AN/PRC-25 in Vietnam (and other places) during the
1960s to 1970s period.

The connector plug will most likely have to be changed to connect
to a PARAMILITARY SGC-2020 arrangement. [Sojer in da woods
fun and games? :-) That seems to be what SGC is advertising.]

Fair also has the PRC-25 Accessory Kit for $69.50. This includes the
H-250, the AT-892 ribbon antenna and AT-271 telescoping antenna, all
in the CW-503 carrying bag. All could be used with a 2020 along with
one of SGC's automatic antenna tuners.

>So what do you plan to do to recruit people to Morse code. If want others
>to use it, you have the responsibility

No, what I meant is that its a better situation for me if more Hams use Morse code. For one thing, I won't be talking to them. But, I'm not going to go and recruit people to use Morse code.

>designating license for review, prohibiting use of 30M by this
>particular induhvidual, or whatever.

Sure. But those things take time and money. The unmodify action can be ordered right away.

To return to the Swift case, it's important to note what we DON'T know. K2ASP this is just the beginning, not the end of enforcement action against this guy. I'm very inclined to believe that.

We also don't know anything about the accused except what's in the database. We don't know how old he is, what his experience or record is, or even if the FT-2500M is his own property. We don't know his mental health or criminal history. We don't know if the distress calls started a wide range SAR or if they were quickly identified as bogus. We don't even know where the unmodify idea came from.

But I bet the FCC knows!

Maybe it was HIS idea, suggested verbally to the FCC.

What, exactly, would you have ARRL and hams do? Personally I am surprised that FCC did not find a way to take the radio as evidence. However, I defer to K2ASP's expertise on the difference between surrender, seizure, and confiscation of property in a case like this.
>

>"Radios don't break radio laws, people do."

Yup. And one solution to the problem is to remove the means of lawbreaking from those who violate the laws.

"Guns don't kill people. Bullets kill people. I say give everybody guns and lock up all the bullets" - Pat Paulsen, 1968

Well Len what I didn't mention, due to it not being relevant to the
discussion that I also have 8 years Army time, from 71 to 79.

Upon enlistment (in 1971) I was given the MOS of O5C20, and a rank of PFC.
After basic I received my Army specialty of O5C40/CW qualified. All based
on my AF speciality.

I received Sgt E5 as soon as I made TIG while in Germany in 72 or 73. Still
having attended NO MILITARY SCHOOLS in the speciality.

As to your comment of not being able to meet the Army requirements.
FYI...while deployed to Don Muong Air Base in 1966 I was given a TDY
assignment. It was to downtown Bangkok to work with the Army Morse
Intercept group. They needed a immediate and temporary fill in. I

qualified....again due to my AMATEUR RADIO LICENSE.

Good duty.

Dan/W4NTI

2137. With CW gone, can the CW allocations be far behind?

Newsgroup: rec.radio.amateur.policy

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Now that Bruce Parens and NCI have won the CW wars, what will happen to the exclusive CW allocations if a CW requirement is dropped? Certainly there can be no argument for keeping the current band structure in place, and phone operations probably ought to be spread out into what was once exclusively reserved for CW operators. Not only would this alleviate the congestion in the phone bands, but it would finally and officially place CW into perspective: Just another optional mode of operation without any exclusive rights to any frequency.

Dan, you really should stop being so reactionary. Perhaps you'll re-read
the comment "In an emergency operation one can use CW almost as a cipher."
Then, perhaps you'll look at my response in a different light. I was
remarking on the fact that William (Bill) was promoting the idea that CW
is/can be used as a cipher. That would not be legal in any way, and
promoting the idea of CW as being a way to "cipher" information is quite
misleading, don't you think?
```

Sheesh, take some time off...

>with 11,000 volt cables.

All utility repair maintainers ("linesmen") must be trained and
qualified to work with primary voltages (11,000 V in your example).
There are special tools ("hot sticks") which they use daily to work
such open lines live, and they have no hesitation to pull the fuses
and work them "cold" if need be. Even after they pull the fuses and
ground the lines, they still use the "hot sticks" which are designed
specifically for the hardware in use.

Transmission voltages (34 KV and up) are something else. Those are
never worked hot.

(As the Portland General Electric channel on my scanner chatters in
the background.)

But you are 100% on point as to what is needed and what the
utilities are liable to do.

You want other hams to use Morse so you don't have to talk to them. That's extremely anti-social on your part and totally opposite of your previously stated desires that you would like to get hams to be more social.

Dee, I don't think I am miscontrueing a thing. It baffles me to no end that
it would actually bother someone to have another wait for their opportunity
to come along. I see nothing at all wrong with someone waiting until
testing requirements meet *their* expectations.

Remember it is not only CW that uses these sections of the bands but also the other digital modes. The large number of hams in the US combined with the limited amount of HF spectrum allotted to hams means some time of regulation may continue to be necessary here. While a voluntary band plan might work, I wouldn't count on it. I've read postings from Europeans where they have problems because people will not follow the band plans especially during their contests. They have a lot fewer hams than we do.

Given the activity on the air right now and the last several weeks, the congestion has been in the CW/digital subbands not the phone bands. Conditions on phone have been poor and there has, in general been little activity, other than a pileup or two on a DX station. Expanding the phone bands won't clear up those types of activities.

So since there isn't any real congestion in the phone bands right now, there is no need to expand them at the expense of all the digital modes (PSK31, RTTY, Amtor, Packet, a myriad of lesser known modes, and also CW).

Then you can't say that you didn't study. You simply used a different study path. No one is born knowing Ohm's law, etc. There is not and never has been any requirement to use the common study guides such as those put out by the ARRL or W5YI. The requirement is to pass the test. If you studied the material in a different venue that is still studying. It does not count as "having passed the test without cracking open a book." Though knowing just the electronics is not enough to pass the test. To get a passing grade, it's necessary to know some of the FCC rules, some of the standard amateur practices, antenna theory (not general taught in most electronics text books), propagation (again not covered in most electronics text books), etc. So one way or another, you learned that too as you're not born knowing that either.

>Now that Bruce Parens and NCI have won the CW wars, what will happen
>to the exclusive CW allocations if a CW requirement is dropped?

The only exclusive CW allocations in US amateur radio are 50.0 to 50.1 and
144.0-144.1 (MHz).

The non-phone parts of 80, 40, 20, 17, 15, 12 and 10 meters are also open to a
wide variety of "digital" modes, from good ol' Baudot RTTY to PSK-31 and
PACTOR-II. Same for all of 30 meters.

>Certainly there can be no argument for keeping the current band
>structure in place,

Sure there is.

>and phone operations probably ought to be spread
>out into what was once exclusively reserved for CW operators.

Actually, I agree with the Central States VHF Society's proposal.

>Not
>only would this alleviate the congestion in the phone bands, but it
>would finally and officially place CW into perspective: Just another
>optional mode of operation without any exclusive rights to any
>frequency.

You might want to check Part 97...

They don't do it because they are more interested in ham radio than the
people who just learned the requirments. ;^)

Even if it is waiting 10 years or better??

I like to see people succeed. Those who wait do not succeed because they do not take control over and responsibility for their own lives. It is heartbreakingly sad to see people electing to be failures because they are waiting for someone to give them something.

If you wait for opportunity to knock, it never will.

Well, us bourgeoises and "lower class" minded people will just have to sit
in
the back of the bus and drink from different water fountains, won't we? :-)

Did the Almighty make all the Royal-Noble Radio Regulations (hardly
different now than from the pre-WW2 era) or did ordinary humans make
those regulations then? Since when do those LAWS remain fixed,
forever engraved in unchageable stone and protected by the armor of
"tradition?" Laws were made by humans and laws can be UNMADE by
humans.

There's been a movement to change those magnificent code laws for some
time and it has ended on the international side.

I know this is a terrible shock, perhaps trauma to the "higher class" elite,
but S25.5 AS-YOU-KNOW-IT went bye-bye. Try to accept reality with some
good grace. It is difficult, I realize, but it must be done.

>They have achieved their personal goals
>regarding ham radio and found their niche.

In my case, I've not found any good reason to join a SERVICE of pretend-
quasi-military radio operators by having to relearn morse code.

>What we oppose is the person
>that wants the privileges of the higher class but refuses to do the work to
>get them.

Tsk, tsk, tsk, the Elite "higher-class" talking again!

Hmmm...I got on HF legally and militarily some 50 years ago, transmitting
on HF from any one of 43 transmitters. Did that for two years without any
formal schooling in the military HF communications whatsoever. I guess
that made me "lazy" in your view, didn't it? Since ADA didn't use any
morse code through those 43 transmitters, it was "lower-class" stuff, right?

Will you agree that "radio" was used? I don't think so. From your tone,
I'd say that you think AMATEUR radio works by different principles than
commercial or government radio...therefore such military radio "isn't as
good" as ham equipment...

>I know some people that want to be a general but not only have
>they been waiting for years for the elimination of the code test but have
>refuses to even try.

Well, you upper-class uppercrust make sure all those signs are up in
bus, the ones directing the lower-class to the uncomfortable back.

That gives you (and so many others) the ILLUSION that you are "superior" and "more advanced" and all that self-promotional stuff. Have fun in your imaginary nirvana. Realignment and reality are just around the corner.

>I wouldnt know Kim. I am just telling you how it USED TO BE when a person
>had a ham license. How it USED TO MEAN SOMETHING.

It still means a great deal. Especially to the ARRL.

However, most Personnel departments back then seemed to think a
Commercial First Phone was a bit "more important" than any amateur
thing. Shrug.

>When I got into this Amateur Radio was so respected that it actually opened
>doors for you. Not anymore. Thanks for helping dumb it down.

Coincidentally, I installed a garage door opener in my house garage about
1965. It opened the garage door every day for me. Wireless remote. No
ham license required.

I've walked into many stores and supermarkets for the last two decades
that had automatic door openers. Worked by reflected microwaves. No
ham license required.

>Your not going to belittle those that went before you. We don't have a damn
>thing to prove to you or those of your ilk.

Oh, YES you do!

I was doing HF military communications a decade before you were beeping
for the USAF. No morse code required or used. No ham license helped me
in any way at ADA...even though the OIC (Capt. William P. Boss) was a
licensed ham and the maintenance NCOIC was a licensed ham plus having
both Commercial Radiotelegraph and Radiotelephone licenses.

Before you got into the USAF, I had worked VHF, UHF, Microwaves, MF (in
AM broadcasting). No morse code used or needed anywhere there...and
some of that communications involved cryptographic transmissions.

Now prove that morse code is an absolute necessity for licensing in a
hobby-recreational pursuit, SERVICEman.

>We know, we have been there and got the tee shirt. Now pick up your jaw
>and commence to run off at the mouth little girl.

Poor guy. Ought to launder that tee shirt by now. You are about to make
some dirty comments... :-)

My brother had an electronics workshop in the basement when I was growing up.
I took electronics at a Vo-Tech in high school. I have been on CB since 1977.

All the stuff you mentioned has been covered by my life's experience.

Remember, all larger items can be broken down into simpler items. Knowing
how they all interact to create a complex system, is important. If you
don't understand the simple concepts, you can't understand the big picture.

>> vanish into the noise level - figuratively speaking.

I was being sarcastic. I guess sarcasm doesn't do well in printed form.

Someone here (Bill Sohl I think) was telling me that Pro-coders now had
the responsibility of recruiting more users of the mode, lest we lose
our bandwidth.

I was turning that statement around to the no-coders, many of who note
all the qualified EE's who are going to swell the ranks after the code
test is gone. I consider that these new hams and those who paved the way
for them to be responsible for what happens after this.

And I was also just repeating Jim's "holier than thou" statement in the
sarcasm.

Hopefully that clears things up.

THAT'S what I've been trying to get through to some of these good folk!!!!

I didn't get my license until I was in my mid-40's, and now regret I
didn't get it a long time ago. Granted, I didn't get interested in the
ARS until the late 1990's, but if there is any advice I can give the
prospective ham is that "It's too much fun, don't waste ANY time getting
your ticket!"

Shows how little you know. If you're smart enough to dig out the info, you will find that I am a long way from being able to qualify as an old timer. I've learned through personal practice and experience as to what works when and under what conditions. It is based on experience that I believe all hams should learn the basics of code. I've used many of the digital modes to be sure I understood their advantages and disadvantages, although these modes are not interesting to me. It is on my personal development plan to do the same with PSK31, the current "flavor of the month."

I have never, ever disliked no-codes. We have some many fine ones in our club. Those who are interested in HF are studying to upgrade. Those who are not interested in HF are fine too. Our satellite experts happen to be no-codes. If I want to know anything about satellites (if ever I choose to invest in the equipment), I will consult them on their experiences and follow their recommendations. That they are no-codes and I'm an Extra (from before restructuring) is unimportant and irrelevant. In that particular area they are the experts with hands on experience while my knowledge in this area is limited to book learning. I have no problem whatsoever acknowledging that expertise. The only no-codes that I find objectionable are those who want the privileges of a higher class without meeting the requirements. Waiting for requirements to change is simply wasting one's time even though they are now likely to change.

But there is. You're wacko for Len.

> Other than my unwillingness to let go of Lennie's tail, no one
> can argue with the validity of MY statements, nor can they deny the
> arrogance and inaccuracies of Lennie's...And yours, for that matter.

I just did, and successfully, I might add. Unless you can come up
with some proof that the shuttle tragedy didn't occur, and that the
astronauts are safe and can renew their amateur licenses when they are
within the renewal period.

You've got your work cut out for you. Better get busy.

> > The problem is that you and Leonard are you own

I've operated DX from Korea, Guam, and Somalia. I didn't need your
approval, then or now.

> Many people here disagree with me, and I they...but the basic
> fiber of the exchanges don't degrade to this point because we can
> agree to disagree. You and Lennie can't/won't do that.

Then there's definitely something up between you and Len. You cannot
ignore even one of his postings. You've got to start a new thread
with almost every response, with eyes rolled back capitalization to
the hilt.

Get a grip and get some help.

> > > > And quit reading Len's posts. They obviously have an ruinous effect

So put on your Avenging Angel wings and destroy him. You said that
you don't tolerate liars, the callous, and the crude. So get to work,
OR...

just ignore Len the way you are able to ignore Bruce.

And by the way, how is it that you can see "mental abberations" in
Bruce that you cannot recognize in yourself?

> > > Lennie is all of that, and you "defend" him...So guess where that
> > > leaves you?
> >
> > So far, I haven't defended Len...(SNIP)
>

This isn't about Len. This is about your insane behavior. You said
Len was a liar in a reply about the shuttle tragedy. You were wrong.

> > I merely said that you were wrong
> > about the shuttle tragedy. It really did occur.
>
> Sure it did. But you have somehow insinuated that by having
> identified Lennie as a liar I am saying he lies about this.

No insinuation. Go back and reread your post.

> I did not.

Oh, but you did. You called him a liar.

> I said he's a callous, insensitive creep.

Yes, you did. But first you called him a liar. Its plainly there in
your post.

This was but yet one
> more a-burke-tion of what was said in order to create a fight in which
> you fancy yourself as being on top.

Look, Steve. You crapped your pants. Just excuse yourself and go
clean up. Then put Len in your "kill file" as you've done with Bruce.
You'll feel a lot better afterward.

> > And I've suggested
> > that you refrain from reading Len's posts in the hope that you'll be
> > able to sleep at night.
>
> I sleep fine, Brain. What would make you think otherwise?
>
> > Now you imply that I'm a rapist...
>
> There YOU go trying to make an insinuation that just isn't true.

You're the one who said you couldn't decide what would be worse. When
pressed, you said "rapist...child molester...spouse abuser.."

Fine.

Look, go ahead and take your parting shot. I'm out of this thread,
but I reserve the right point out your poor behavior in your next new
thread.

RK,

Don't know if this is really about Shortwave; may be the interference
that it can cause to Shortwave reception.

But if you have your facts right then BPL would do little for our
rural communities but would do some major harm to radio reception in
Urban Areas.

I don't want to talk to some older males. Thats not anti-social.

And they are there Fri, Sat night on several bands, including 40m, 2m, and ATV.
I know from the DXpedition in May.

Many Hams will work DX. They get a thrill from that. But, they won't talk to
the person next door or to anyone in person. Thats why a local Ham's neighbor
complained that the Ham has too many antennas at his house.

Nope. ARRL's proposal was to go back to the pre-1953 system where it took an
Advanced or Extra for full privileges. Also reopen the Advanced to new
licenses.

> 1965 is THIRTY-EIGHT YEARS AGO,

So what? You talk about much older things that are much less relevant.

> No Internet then and
> Washington, DC, was a far place to get to and communicate by paper.

Not at all. An envelope and a stamp.

> Hams in the USA rarely wrote to the FCC for anything...

Wrong. The incentive licensing proposals brought in over 6000 comments back
then, even though there were only about 250,000 US hams.

Did you have a point to make?

2174. Re: Ham Radio In The Post-Code Testing Era

>300,000 exchanges per year or nearly 1000 per day. That would keep the
>bands pretty busy.

Whoa, hold on a sec, Dee.

Let's look at that 1000 QSOs/day. Say a QSO lasts a half-hour on average - that's 500 QSO-hours per day. Or, to put it another way, there would be about 21 QSOs going on at any one time.

Now if we just consider the bands 160 through 70 cm., we have 13 bands. Might work out to one QSO on each HF/MF band and three QSOs each on 6, 2, 222 and 70 cm. Hardly enough to keep the bands pretty busy!

If you meant to say "one QSO per DAY", then things are much different.

>But instead we hear the same people over and over on the
>VHF and HF frequencies. We have 150 members or so in our club and I only
>hear about a dozen on the repeater regularly. It's the same dozen that do

> ....what will happen to the exclusive CW allocations....

Except in the USA, most amateurs do not labor under "sub-bands" based on mode. As an example Canadian amateur have no such restrictions. It's a source of continuing wonder to me that the FCC continues to arbitrarily slice and dice the bands based on mode, license class, power levels, and similar artificial constructs of their imagination.

73, de Hans, K0HB

PS: There are no "exclusive CW allocations" below 50MHz.

Well, folks, there it is -- as I've been saying for years, it's all about
getting a microphone in hand and yakking away!

>>

Jim:

I sure hope you're right about what you say about PSK31. However, I have
been using that mode since shortly after it was available to hams, and have
not noticed any particular ruggedness when dealing with QRM. In fact,
just about anything will cause a "hit" when copying a PSK31 signal. And
while this generally does not render the whole QSO useless, it doesn't
offer any more copying accuracy than CW under adverse conditions, IMHO.
Personally, I think plain ole FEC AMTOR is a lot better, but the only way
I've ever had a QSO in that mode is to ask someone working RTTY to
switch over and give it a try.

>because I was willing to learn the code, but because I was willing to
>compromise and start with a no-code licence! BTW, the QCWA favour
>abolition of the code test. Are you sure you want to join?

Alun:

It is not unusual for amateur radio organizations to take a "politically
correct" stance re: code testing. Even FISTS, and organization which
hails itself as "The International Morse Preservation Society" does not
"officially" support the concept of Morse code testing for an amateur
radio license. I have been a member of FISTS, but haven't paid my
dues since '01. I may "re-join," even though my FISTS number is good
for life whether I pay the dues or not, since paying up only gets me a
rather lame newsletter.

>You gave a G0L__ as your old call, but that's too recent to be 1983, isn't
>it?

I received my U.K. call, G0LYW, in 1989 whilst stationed at RAF
Mildenhall, UK. I operated mainly 40- and 20-meter CW, and, oddly
enough, a bunch of 2-meter SSB.

>>
>>
>
>I suppose Larry will never consider me a fully-fledged ham, even with 20
>wpm, 'cause I operate 100% phone, LOL.

Alun, my opinion of you as a ham is not dependant on your usage of CW. All I ask is that you don't whine about it, and that as a ham, you make an effort to do something more challenging than just yakking into a microphone. That would imply the use of at least one digital mode. CW operation would be the icing on the cake, and go a long way to impress me. However, I'm not here to be impressed by you, or anyone else. At the end of the day, your participation as a ham will always be driven by whatever provides you with the greatest satisfaction, and I don't begrudge anyone having fun on their own terms. However, the code testing debate was started by those claiming that code testing was impinging on the development of technical skills within the ARS, which is patently untrue. Therefore, before you judge me, you must understand where I've been coming from throughout this debate -- that code testing imparts a useful skill on radio amateurs, and increases their overall communications capabilities. Those who don't know the code or use it regularly simply are not qualified to judge those who support code testing requirements.

Kim:

Hey, I'd like a Ph. D in Electrical Engineering. How long do you think
I'll have to wait for the testing requirements to be reduced to a 50-question
multiple guess with a passing score of 70%, with an open question
pool and no dissertation required? Since I'll never actually do any
electrical engineering, those are my expectations of what the testing
requirements should be. So, whaddya say -- 5 years? More? Less?

"N2EY" <n2ey@aol.com> wrote

>
> Then why did the Navy (at least) keep training them, and to high levels of
> proficiency?
>

Because until about 1960, most of the "small boys" (destroyers,
submarines, frigates, and fleet tugs) still used Morse for passing
traffic ashore. With the advent of Orestes (covered Baudot) in these
hulls, about 1963, the widespread training of Navy Morse code operators
ceased. After that point, each ship had a complement of 2 or 3 Morse
capable operators "just in case" until the late 70's when even that
modest capability was no longer maintained. We're talking about a
quarter century ago!

>
> But then why was the FCC so hot for more code testing in the 1960s?
>

Because ARRL had the ear of FCC minions like Johnny Johnston, et. al.
In that same era others at FCC were pushing a "dual ladder" licensing
structure
with 4 or five levels of progressively more technical no-code or
minimal-code "VHF/UHF Communicator" licensees. ARRL didn't think these
guys would be "real hams" and used their "inside guys" at FCC to squash
such progressive thinking.

There is a little bit over 50Mhz of frequencies they could do alot with there, and I almost would accept the loss of those bands if and only if we had a guarantee that the rest of our bands will never be altered again. What the hell, we sure aren't doing much with those bands as a hobby as a whole.

Some can't get enough pretty, engraved certificates. Those prove you are SOMEBODY!!!

You need a Worked All Certificates award.

"Knock" it off, Dee. Nobody is a "failure" for not liking morse code.

If you want to be "sad" (whether heartbreakingly so or otherwise), then
weep for EVERY OTHER RADIO SERVICE that either never used
morse code or never intended to. That ought to get you through at
least 10 boxes of Kleenex with all the "sadness."

Boo hoo...

I had sent a copy to a few of the area newspapers to see if it was gonna
show up as a follow-up story, but have seen nothing as of yet. Would be
good to see the good side of the article printed in some newspaper.

Oh Goody. Turn that info over to the FCC Inspector General and the U S Attorney General, because it is a violation of Federal law to be so involved and/or he is perjuring himself on the required annual Financial Disclosure form.

Because we had to sell my then-wife's AT&T stock when I joined the FCC as a field engineer, I have no sympathy for someone else who tries to slide by without such divestiture....if in fact it is happening.

You do have solid proof of that, right?

>They could have seized it as part of the "evidence" for an investigation
>though. It would take them only a few hours (if that) to get the
>appropriate warrant.

No, Dee, the FCC cannot "seize" equipment under any circumstance.
The seizure would have to be done by the U S Marshal Service in
compliance with a court order.

Even in a situation like this, the probability of getting a warrant
- and the Marshal to serve it - within a few hours is rather nil
especially when the U.S. Attorney's Office for the Northern District
of California is involved. In years past there was a warrant
paralegal there who speeded our cases through on a one-to-one
personal basis because our paperwork was always complete,
understandable, and error-free, but she is long retired and her
successors are not so inspired.

Too many people in the U S Attorney's office, the Marshals, and the
courts are involved in examining and approving the procedure, and
getting them out of bed in the middle of the night is not
realistic for situations like this where the culprit has been
identified and interviewed and, most important, the interference
abated.

This isn't Lennie Briscoe and "Law and Order" where warrants appear
out of thin air. Our usual lead time on an equipment seizure
warrant was three days and that was considered "fast".

If you haven't figured it out by now, applying for and getting
warrants was one of my major specialties at the FCC and I've been told
the procedures and the roadblocks haven't changed.

> What was untruthful about the shuttle tragedy?

That you continue to try an make the tragedy's occurence itself
the center of discussion is yet more evidence of your unwillingness to
stand up to the truth. The topic was Lennie's blatant ugliness in
using it for some irrelevent newsgroup positioning.

> > There's nothing to be "diagnosed", Brain.
>
> But there is. You're wacko for Len.

Nope. Lennie's wacko himself. That he continues to feed the NG
with fuel for his own demise is his problem. You are following in his
footsteps. Too closely I might add.

> > Other than my unwillingness to let go of Lennie's tail, no one

> within the renewal period.

No...what you have done is try to make the tragedy itself the
center of discussion...It's not and never was. Lennie's blatant and
callous use of it for his own petty arguments was.

That you attempt to compound that act with his "defense" lumps
you in with him.

Whatever last vestiges of credibility you enjoyed prior to this
round has evaporated.

> You've got your work cut out for you. Better get busy.

I said Len is a liar. That is not in dispute. I said he is
callous, insensitive, and a creep. That's not in dispute either.

YOU said I said he lied about the shuttle tragedy. That is a
lie. That you choose to further continue your attempts to cover up
your own foolishness and callousness is evident.

> > > I merely said that you were wrong
> > > about the shuttle tragedy. It really did occur.

> thread.

As well you should be, Brain. You should have never enetered it
in the first place, ESPECIALLY since you seem to be unable to get the
order and context correct.

As for "parting shot(s)", I doubt this will be the last time we
tangle, Brain. You've consistently proven your wilingness to engage
in topics of conversation that you are either clearly unprepared for
and give little thought to the probable outcome when tasked to be
forthright or provide evidence of support for.

Auf Wiedersehn.

Great post up to here, and the information is truly appreciated.

> [Sojer in da woods
> fun and games? :-) That seems to be what SGC is advertising.]

Acutally I want it for base station operatins in a high noise
enviroment, but one where wearing a headset is impractical.

Usual "dissing" of "sojer in da woods" and alleged paramilitary
activities noted. I am unable to speak for SGC's intent.

The acronym "OPSEC" has been around for many decades - long before Delta Force or whatever. I first heard it from my father when I was just a young child. And I've seen the acronym in very old books about WWII.

I agree with Dee's post in it's entirety. While I can accept the
paring down of the present "Novice" allocations to make more phone
spectrum available on those bands, CW and the other narrowband modes
still enjoy significant following among ALL operators on all HF bands.

Perhaps it might be more "palatable" to those who disdain Morse
Code if we simply refer to them as "narrow band" and "wideband"
allocations?

I imagine that the "class" restrictions will fade soon.

As for mode restrictions, see my comment on Dee's post...Perhaps
if we consider these as "wideband" and "narrowband" allocations it
would be more palatable to all (or at least more)?

I also think it will happen much quicker then most expect. I wouldn't lock myself into a fixed time period at this point, but I do suspect some action in this direction fairly soon.

Actually, I suspect the FCC has been gearing up for a long time for a relatively quick move in this direction when it became possible. Some of their comments and actions over the last few years has only fueled that suspicion (nothing specific in what they've said or done - just a feeling).

I guess we'll see soon enough if we're right.

Not only that but the stupid allocation of the 7.00-7.100 as a CW
only band makes 40 meters almost unusable outside of the U.S. That's
our entire 40 meter band, and so we can't work the states without spilt
operation, which doesn't often work because we are swamped with European
brodcasters.

We can't work locally, because by convention, we use ssb in the upper
half and get destroyed by all those digital signals that come from the
U.S. and clobber us.

IMHO the best thing to do is open 7.050-7.100 for ssb in the U.S. and move
the digital stuff to the old novice band.

Geoff.

It's kinda like saying "I'm not going to buy a (new computer, digital camera,
PDA, flatscreen TV/monitor, MP3 player, etc., etc.) until the price drops below
X dollars", isn't it?

In fact, might not part of the driving force behind a "wait and see" policy?
One of the best ways to kill a sale of items like the ones above is to say
"there's a new model coming out soon that will do more and cost less".

True story: Close friend of mine needed a PDA for work. Everybody at her
workplace uses iPaqs, so she goes to the local computer store and gets one at a
discount. It's the demo model, last one in the store. Takes it home, installs
hardware and software, struggles with it, dern thing won't sync with her PC no
matter what she does. Takes it back, store tech says it's a defective cradle
and she gets a full refund.

Two weeks later goes back to the same store and gets a brand new iPaq, no
discount, with more features, longer life battery, yada yada - for less money.
Works perfectly.

Sure - so FCC was behind that curve. Note also W4NTI's military service and use of Morse skill in same.
>
>> But then why was the FCC so hot for more code testing in the 1960s?
>
>Because ARRL had the ear of FCC minions like Johnny Johnston, et. al.

Yet it was FCC, not ARRL, that wanted more code testing. If FCC had simply adopted ARRL's 1963 proposal, 13 wpm and an Advanced would have gotten hams all privileges.

FCC came up with 16 wpm from a source other than ARRL. The League and others eventually got FCC to drop that idea.

>In that same era others at FCC were pushing a "dual ladder" licensing
>structure with 4 or five levels of progressively more technical no-code or
>minimal-code "VHF/UHF Communicator" licensees.

You might want to recheck the dates and details on that, Hans.

The incentive licensing stuff started in earnest in 1963 and was enacted in 1967. The first changes took effect in '67 (Novices made 2 year, Advanced reopened to new issues, written tests changed.) The reduction of privileges of Advanceds and Generals took effect in November '68 and '69.

The dual ladder idea was proposed in 1975, almost a decade later. It called for 3 licenses in the "HF" ladder and three in the "VHF" ladder, with the Extra on top of both ladders. Kinda like an A-frame stepladder. Seven classes in all, and the top of the heap included 20 wpm code.

>ARRL didn't think these
>guys would be "real hams" and used their "inside guys" at FCC to squash
>such progressive thinking.

There was a detailed questionaire sent to all members back then, and the views of the members were clearly against the dual ladder idea. After all the bad feeling from the IL mess there wasn't much desire to promote an unpopular scheme.

This was also the peak of the CB craze, when FCC wanted to reallocate 220-225 to a new "Class E" cb service.

It's interesting that you call the seven-class two-ladder system "progressive thinking", but today favor a two-class license system, as I recall.

They are only "agreements" written by
IARU and what is IARU ? Nothing, just
smoke ...
The next target is to FORBID totally CW
on ham bands below 1 GHz, because of
pollution generated by CW and old farts
CW coders using illegal amps. All
no-coders hams must put a mondial complaint about CW pollution in the
world.
Remember TITANIC had sunk because CW
was used. If SSB was used, the ship
has been saved. Samuel Morse invented
his silly code because he was not
enough clever to invent SSB.

> see is CW HF, then thats all you've got.

But in hundreds and hundreds of posts, Vipul, you've said just
the opposite...As a matter of fact, you have LAMENTED the lack of
activities or opportunities in Amateur Radio. Myself and others have
been telling you otherwise but you insisted that Amateur activities
were (in your opinion) limited to two or three specific activities.

Finally wake up and smell the coffee?

BTW, Larry has frequently mentioned several other data/digital
modes he utilizes. Why do you avoid addressing/accepting this?

Sure it is.

It's also discriminatory. How would you feel if I told YOU that I
don't want to talk to persons of Central Asian origin based soley upon
that criteria...?!?!

> And they are there Fri, Sat night on several bands, including 40m, 2m, and ATV.
> I know from the DXpedition in May.

What DXpedition? A DXpedition is the operation of an Amateur
Radio station from a rare or semi-rare location for the purpose of
activating that entity, ie: Cocos Keeling, Swan Island, Bouvet, etc.

> Many Hams will work DX. They get a thrill from that. But, they won't talk to
> the person next door or to anyone in person. Thats why a local Ham's neighbor
> complained that the Ham has too many antennas at his house.

Neighbors complain about antennas because they percieve them as
asthetically inappropriate for the neighborhood, a safety concern, or
perceived RFI source, NOT because the guy next door won't talk to him!

Precious, Vippy...just PRECIOUS!

What was progressive was the notion (which ARRL rejected) that a ham could be advanced along technical/scientific lines without being able to copy Morse code. It's interesting that you didn't take the time to review my proposal to FCC in response to WT Docket 98-143. If you'd taken just a moment, you'd have noted that it included the same notion of a "dual ladder" which included an option for advanced electronics qualifications without Morse testing. Sunuvagun, isn't that interesting!

With all kind wishes,

Maybe two dozen hams in Star Valley. 10K-foot mtns on east side;
9K-foot mtns on west. Virtually no HF workings here. Everybody on 2M
with repeater at north end at 8900-feet linked westward to Oregon and
southward to Henderson, Nevada through Snowbird Links. Repeater at
south end is 1,200-feet AGL for valley traffic. Another repeater in
Jackson Hole for traffic there with some of us able to access it.
Everyone else on the Internet for 'Round-the-world communications!'

This cannot be, for no one wants to take anything away from Morse code users.

Dan, its not a first, its a second.

One ham on rrap has suggested that he would not only use Morse/CW but
that he would send the characters so atrociously that it could not be
read by a computer code reader so that the NCTs couldn't know what he
was saying.

You have DICK to thank for that.

voltages up to at least 765kv are worked hot in the states. there is a
helicopter company that specializes in this kind of work so that those lines
don't have to be shut down to do repairs. lower voltages like 115kv and
69kv are worked hot with fiberglass 'hot sticks'.

That's right Larry! The problem is CW may be "semi-officially"
gone, but it's pungent aroma remains. To be honest I really do not
think it makes a difference anyway now, as what young person
in their right mind is going to consider a hobby full of tired old
white men who only shop at the dollar store and "double" time
and time again on the HF nets because they can't even HEAR
each other in the first place thru their $2000 Icom and
Yaesu HF radios? A casual tune thru 20/75/40 meters will
convince anyone of this...

Yack on boys!

Capitulate? You overestimate your importance to the world of amateur
radio. You aren't involved in any capacity, Little Leonard. You issue
catcalls from the sidelines of a newsgroup.

Yes you are right.

Cypher/Incrypting is used to hide the intelligence in the communication. Morse Code is not that. Morse Code is used to transmit plain text (English in this example) which can be 'decoded' by a real ham anywhere on this planet.

Of course I understand his initial meaning. That the general public and MOST ham operators cant copy Morse Code. So it would be equivilant to incryption.

Ive been know to do that in some situations. I.E. When the returning station is sending perfect cw and cant copy a thing I sent to him. Must be on a reader and a keyboard. I just screw up the character spacing, or go to a bug. Works every time.

> alot?

Oh, you believe that amateur radio causes overeating. Ever hang around
a Burger King? I see fat people going in and coming out. It must be
that Burger King causes overeating.

> Surprising, Ham Radio brings in few females.

Why is that surprising? Automobile restoration brings in few females.
Model railroading brings in few females. Maybe you want to take up
ceramics or flower arranging.

> I cant find any, despite my best effort. Lets face it, Hams are > anti-social males.

Ah, my little troll, you've tried to sell this same load of manure a
number of times. Perhaps you, the electro-geek are the anti-social one.

> Significant percentages are overweight and older.

A significant percentage of all Americans are overweight and older.
America's birthrate is down. Older people tend to have more expendable
income. We also have inexpensive, plentiful food in America.

> Most do not like the
> technical aspect, either. You'll find that at any random Ham Radio gathering or
> event.

You don't know anything about what most do.

Why do you assume everyone gives a damn about your credentials? Im not in a
contest with you. I was just responding to a question or comment, directed
to me.

And NO. I don't think Im better than you in Electronics at that point.
Because I was not into electronics at that point. I was a GROUND RADIO
OPERATOR in 1965.

>
> >And I totally credit my interest in HAM RADIO as the reason and source of

Nope, I was a GROUND RADIO OPERATOR at that time and didn't need
electronics courses to advance in that area. As far as patriotism and love

of country....I think 2 years plus in Nam and 12 years in uniform is enough proof.

>

There were no 'mods' and 'diode snippings' involved. My ham station of the 1960s consisted of homebrew tx and later a Knight T50, then several other junkers. I had to keep fixin them to keep em on the air. I got smart quick. Or was not on the air. Original 'Incentive Licensing' for me.

Very good indeed. The Commercial First Phone. Which had absolutly nothing to do with ham radio. Some said it was equivilant to the Amateur Extra ticket. I wouldnt know. I only had the Ham stuff. No need for a commercial. I was never into being a 'broadcast engeeennnare'. You know the switch thrower. And the solder jockey at the KW AM street corner broadcast station. Didnt need one in the military, and didn't need on when I worked for Bendix in the Avionics department. Nor at the Anniston Army Depot where I was a electronics technician.

I guess if I really needed one I would have gotten it. But why bother? I don't get licensees and degrees to impress some people...like some folks do..... I get em if/when I need them.

You must be mentally challanged or something Len. I never said I did a damn
thing doing Morse in the military. You have some sort of a problem. What
it is I dont know, nor do I care. But you need to seek help.

I think what must have happened was that guy that knew CW must have stolen
yourcup cake and you can't get over it.

Your pathetic Len. You really are.

Whoop de do. By that time, the US Army was phasing OUT morse
code for tactical field communications...it already did NOT have
any need for morse methods in long-haul strategic communications.

>Upon enlistment (in 1971) I was given the MOS of O5C20, and a rank of PFC.
>After basic I received my Army specialty of O5C40/CW qualified. All based

What's an "O5C20?" Or "O5C40?" The US Army changed MOS
designations after I got out in 1960 and again before present day.

>I received Sgt E5 as soon as I made TIG while in Germany in 72 or 73. Still

Ooooo! All due to your AMATEUR RADIO LICENSE!

Of course they did. How could they fail to overlook the wonderful
skill and dedication of hard-working morsemen?

Did you make DXCC from Bangkok? WAC?

Can you copy Thai at 20 WPM?

No? Never? Not even in metal mesh suits, suspended from a
helicopter?

Gosh, I'd better write the IEEE SPECTRUM real quick...a few years ago
they had a big article with photos on how those MHV lines ARE
worked hot.

Thanks for the heads up.

> users.

Why not, 8 years ago, the Arrl did a survey. They asked amateurs who had passed a morse code exam if they EVER used morse code. Two out of three responded "no". I.e. 2/3's of the hams surveyed NEVER used morse code.

Of course in those days they spun it as "1 out 3 sometimes uses morse code".

So if it came to a vote you'd have a hard time keeping things as they are.

Geoff.

>Remember the UPS-220-222 MHz fiasco? FCC granted UPS that frequency
>range THEN UPS found it to be useless for their purposes.

Amateur Urban Myth Number 1. UPS never applied for, and were
never granted, a license to operate a system on 220 MHz. The push
to "develop" that band was made by "Tio Carlos" Roberts, an ex-FCC
"fair haired boy" engineer who had stayed with the agency long
enough to talk them into giving him a grant to pursue a Master's
degree in Communications Engineering on a non-competitive basis - I
would have loved to get considered for that grant but I was not of
Hispanic heritage - and then dickered around as a rather ineffective
Bureau Chief until "the industry" waved money in front of him.

The ACSB equipment that he was hawking never worked, and UPS got
tired to waiting and went to The Big Emm and bought the existing
800 MHz system.

>We still didn't get it back.

By that time, other nation-wide entities (including the American Red
Cross) had applied for and were granted licenses for more conventional
(FM) networks nationwide.

The ARRL did appeal the takeaway through the courts but the courts
did not reverse the Commission.

As is the Condor Connection. The repeaters are all in the 222-225
band. My understanding is that the inter-repeater links are all on
440 these days. One or two of the repeaters are down at the moment,
but most of them are up and working.

Most of the 222-225 repeater frequency allocations here in the SF Bay
area seem to be occupied by active repeaters. Some of them are
standalone, but at least half seem to be crosslinked to local 2-meter
repeaters.

Where did you see that concept in the 1975 dual ladder proposal? In
that proposal, all of the VHF/UHF licenses required code tests except
for the very basic "Communicator" class, which would have had an
extremely simple written exam. Full privileges would have required an
Extra, with its 20 wpm exam.

> It's interesting that you didn't take the time to

I reviewed it but did not see it as "progressive" in that sense. Your
proposal is actually a four-class system, with three tests: two
written and one code. The only incentive offered for more technical
tests is more power.

Keep in mind that the US has over 600,000 amateurs. The only other country with similar numbers is Japan, most of whom are limited to very low power operation however. If Japan is excluded, all the other countries combined don't have as many amateurs as the US. The foreign countries do have band plans. Unfortunately they do not honor these band plans during contests. It is unlikely that the US would do any better in following voluntary band plans so with our numbers of hams, it may very well be wiser to keep regulated restrictions.

The recent WRC conference has directed broadcasters to move out of the 7.00
to 7.200 segment by 2009 and that will become a ham only band worldwide.

Opening up 7.050 to 7.100 for ssb in the US won't solve your problems. You
will still get clobbered by the US digital signals as they won't move. It's
too well established in the band plans for people to change.

The ARRL had a new survey in the last 6 months. Half of the respondants use morse any where from occasionally to 100% of the time. Morse code usage appears to be on the rise. In the past year, participation in the ARRL Morse contests showed an increase of 20% over the previous year. Participation in the voice contests was practically the same as last year with virtually no growth.

So that 8 year old survey does not reflect today's situation.

>the state on 222 - all gone!

Incorrect. The Condor Net is still alive and functioning well...as of
5 July 2003. For particulars, go to -

www.condor-connection.org

Condor Net is a remarkable amateur radio privately-owned network that
is accessible by any licensed amateur...no dues or "membership"
required. It covers California, Nevada, and Arizona with a small part of
Utah included. 14 mountain-top stations on frequences from 223.84 to
224.90 MHz, all with emergency power capability.

All access and linkage is through CTCSS tone coding, as it was in
early 1978 when Harry Terraneau (WA6SXR?) demonstrated it for me in
Newbury Park, California.

Well, Dwight, some in here still think there was CW used in the First
Gulf War to send intel data "from behind enemy lines." :-)

I've never heard the term "OPSEC" in the 1950s while on active duty or
any time as a civilian from the 1960s on through the end of the 1980s
while visiting different military branch installations.

COMSEC or COMmunications SECurity is the current buzzword (of the
last decade or so) and refers to any means of encryption in military
communications.

Oddly, "ICOM" or "Integrated COMSEC" is applied to later models of the
SINCGARS R/T that includes hardware for voice/data encryption and
decryption. That does not refer to the Japanese designer-manufacturer
of communications equipment Icom.

Perhaps some have seen too many Chuck Norris movies? :-)

The US government is more aware about VHF and higher frequency use than you think. The NTIA periodically conducts wideband recording of ALL RF emitters from VHF and up in many urban centers. You can see such reports with full information on equipment, maps of coverage, etc. at the NTIA website.

So-called line-of-sight bands aren't going to sound the same as HF ham bands due to different propagation effects. For example, you could not be expected to hear anything of the Condor Net in Michigan despite the Condor Net operating over three western states (CA-NV-AZ). The Condor Net began in 1978 and is still running with 14 stations in three states, all done under private ownership with free access to any licensed amateur with 220 equipment having PL/CTCSS tone capability. A quarter century of service, all done voluntarily, says to me that there sure as hell is something going on in the bands above 30 MHz.

I fail to see the connection of the FCC and the US Navy insofar as
modes of communications "influence" in military radio. That is
solely your inference/opinion and not bolstered by any factual data.

>Note also W4NTI's military service and use of Morse skill in same.

Totally irrelevant. Dan, W4NTI, served in the USAF and was TDY
in Thailand to an Army unit doing ELINT work, interceptions. That
is NOT communications, just military intelligence tasks.

While there is cooperation between military branches on methods
and hardware for same, the USN is not "influenced" on needed
choices of communications by what either the USA or USAF use.

Hans Brakob has a lot of experience in USN communications. I
have some experience in US Army communications. We have both
serviced in the military. You have not served in the US military and
have no prior claim to doing any sort of military communications.

>>> But then why was the FCC so hot for more code testing in the 1960s?

All this "insider information" on cause-effect is a lot of uncorroborated
opinions based on very little. 1963 was FORTY YEARS AGO and
you have not yet had any personal experience with amateur radio at
age 8.

>>In that same era others at FCC were pushing a "dual ladder" licensing

>broadcast station. Didnt need one in the military, and didn't need on when
>I worked for Bendix in the Avionics department. Nor at the Anniston Army
>Depot where I was a electronics technician.

Strange, most personnel departments give more credence to a
commercial radio license versus an amateur radio license. The former
is for professional work while the latter is, well, amateur stuff.

The US military does not require any civilian radio operator licenses of
its service people. The FCC does not rule over any military radio use.

Your amateur radio license does NOT authorize you to transmit on civil
airways frequencies nor conduct maintenance on civil avionics. It was
that way in 1956 and still is in 2003.

>I guess if I really needed one I would have gotten it. But why bother? I
>don't get licensees and degrees to impress some people...like some folks
>do..... I get em if/when I need them.

No? No impress-the-friends wallpaper?

Some in here are so adamant about Passing Ham TESTS that they insist
that all in a newsgroup MUST have passed a Ham TEST.

The TEST passing is all important. But, it can only be an AMATEUR
test. Harder commercial tests are considered "inferior." Illogical.

>You must be mentally challanged or something Len. I never said I did a damn
>thing doing Morse in the military. You have some sort of a problem. What
>it is I dont know, nor do I care. But you need to seek help.

I sought help from the FCC in the form of Comments on FCC 98-143.

So, you did NOT use morse code in the military? Which is it? First you
brag about the ham license (which required morse code demonstration)
as "helping you advance" in the military yet now you say you never used it?

>I think what must have happened was that guy that knew CW must have stolen
>yourcup cake and you can't get over it.

No "guy that knew CW" ever stole any "cup cake" from me, neither the confection nor the "cupcake" type of girlfriend. :-)

>Your pathetic Len. You really are.

Nope. I'm an American of Scandinavian ancestry who has never seen any need or necessity in having a morse code test for an amateur radio test in the last 30 years or so.

I was DOING 24/7 radio communications on HF 50 years ago and never once had to use any morse codings...not then, not afterwards...and don't consider such as license-test-worthy for licensing in a hobby-recreation activity involving radio.

You are under the presumption that your vaunted amateur radio license gives you some special permission to denigrate and demean others. It doesn't do that. Your "pathetic" comment only serves to prove that you won't accept any opinion that is not in line with your personal opinion.

You need another venue for venting your aggressive frustrations. :-)

Yes, most colleges (if not all) already have T-1 or T-3 lines which are
networked through every building. I seriously doubt they would ever
consider BPL technology because it would be a net loss of something on the
order of 70% of their current bandwidth. Each student has more or less the
equivalent of something like 5% of the total bandwidth available via BPL..
(these are only guesstimates, but they are based upon figures I have seen
posted about BPL's bandwidth, it starts getting down to dial-up levels by
the time it's been distributed to 2,000 users..)

Sorry for not spelling out my underlying assumptions more clearly. I was really thinking HF only and US only. Plus I should have cut the number in half because only half the hams are licensed for HF. Still though I did mean one QSO per year. There have been occasions when I have monitored the HF bands for an entire day either because I was ill or just felt like doing that on a weekend and outside of contests or DX pileups, I've never heard anything approaching a total of 250 QSOs on all the HF bands combined.

But your calculation is a valid way to look at it too. If every ham made one QSO per day, your calculation would mean 365 simultanous QSOs on every one of the HF bands and more than that on the VHF/UF. Boy could we justify more total spectrum then. Wouldn't that be sweet.

Once again you haven't read was written. Larry only stated that he didn't like being a no-coder. He never said he didn't like amateur radio and never said that there weren't enough areas of interest. He simply did not like being without code.

I have NO problem with REAL facts, Reverend Jim.

I have a big problem with suppositions and inferences and obvious spin-doctoring which are presented as "real facts." :-)

>> You constantly repeat What Was Done.
>
>So? You constantly repeat What Len Did.

Tsk, tsk, tsk...what I did was in areas where you've never been involved. The US military for one such area. Probably the commercial radio services, too, since you cannot divulge your employer's name. :-)

The US Army decided NOT to use any morse code for long-haul communications on HF way back in 1948. That wasn't up to me to decide. Five years later I would be one of many thousands who were in the service and involved with HF communications at the same time as I was. I've seen and been a part of what many consider as the "Big Leagues" in HF radio communications. You know very little of such and were never a military serviceman.

You are desperate to keep up appearances that one of your personal favorite modes of radio communications (OOK CW) is "still in use" and therefore should be included on license testing. As such you try to depict what thousands of others have done while in the military as either irrelevant or incosequential. It isn't, but you cannot bear to admit it. If you agreed with it you would destroy your own argument in favor of continuation.

I've only shown EXAMPLES of radio communications NOT involving morse code by having direct experience with such. I didn't decide that morse code should not be used in such applications. You are resentful that anyone has extensive experience in radio and communications beyond your own amateur efforts. Not my problem.

>Heaven forbid someone prove you to be in error about anything.

I TRY to be correct in my written facts...and include source references wherever possible. If I make a TRUE error, then I will admit it.

However, I will NOT change anything because someone presents opinion, inference, and conjecture as "facts." I will NOT accept pseudo-facts that are really spin-doctorings of what some political entity considers "facts" such as the ARRL.

>Your personal experience of fifty plus years ago is irrelevant to
>amateur radio policy, but you repeat it anyway.

I can't help that I've had experience in radio communications going back
50 years. It hasn't been in amateur radio, true, but there is NO
difference in radio physics between "amateur" and "professional" radio.

If morse code OOK CW was so wonderful, error-free, able to really get
through when nothing else would, then many other radio services
would have continued to use that mode. They have NOT despite your
continuing insistence that they "should" or even "ought to."

Radio, the whole of radio, not the microcosm of use represented by
amateurs, is and has been a proving ground for what does really work
in the way of communications. Since the physics of radio is the same
regardless of the human legislation as to use-terms, that only leaves
actual operation (by design or trial and error) as the PROOF of what
works and what doesn't. Just because you personally favor some
mode of communications does not make you some kind of all-knowing
wizard of mode judgement, amateur or professional.

>> THIRTY-EIGHT YEARS AGO you were about 10 years old. At the

>> wave communications with my Honorable Discharge received five
>> years in the past.
>
>Irrelevant to the discussion.

How so? As a 10 year old were you precociously gifted with an
adult's ability to judge anything?

You keep speaking of a time 38 years ago as a true life experience in
radio coupled with perfect adult observation and judgement. I doubt
that you were so gifted based on your current comments.

>> Did you frequent the FCC Reading Room in DC a lot?
>
>No - did you?

Since 1956 Washington, DC, has been about 3K miles from my home.
You live much closer to DC than I do.

>> Frankly, I don't think you did squat about any
>> comments way back when.
>
>I don't claim to.

Then why did you mention them?

>Did you comment "way back then"?

Not on amateur radio.

>Do you have any disproof of my facts as stated?
>
>Didn't think so.

I do have disproof in what I've written in this message.

You've also stated a number of negatives. Neither I nor anyone else
can disprove a negative, a non-existant condition.

>Tell us more about the ham-astronauts and their callsigns, Len.

Sorry, that is "irrelevant." :-)

Why don't you tell us all about your involvement with the space program?

Sorry, Alun, but I've already been licensed in radio (since 1956). :-)

I've never expressed any real intent to get an amateur radio license in
here. My involvement is to eliminate the US code test for any radio
license examination. It's as simple as that.

>> I don't want to talk to some older males. Thats not anti-social.
>
>If we go by your rules, it certainly is.

Its still consistent. Those Hams are on the radio, not in person. For example, those Hams at the "DXpedition" contacted other (anti-social) Hams on Sat night, but did not meet anyone in person.

That has nothing to do with the technical part of the hobby. The technical part occurred during the antenna and equipment setup. There was plenty of operating during the day, so operating on Sat night more represented the social aspect more than any technical aspect. Therefore, this is how those Hams spent their Sat night. Seems anti-social to me.

>You didn't go on a DXpedition.

They called it a DXpedition.

>> Many Hams will work DX. They get a thrill from that. But, they won't talk
>to
>> the person next door or to anyone in person.
>
>Your record is stuck, Vipul. Your claim is simply another tired
>stereotype offered without proof of any kind.

I gave an example above where the Hams contacted people through the radio, but did not meet anyone in person. (Probably avoided it). This was not my local club. It was a random group of Hams.

>Not only that but the stupid allocation of the 7.00-7.100 as a CW
>only band makes 40 meters almost unusable outside of the U.S.

Sounds like anti-American arrogance.....

There are no CW-only American subbands below 50 MHz. They're all shared with 'phone and image modes.

>That's
>our entire 40 meter band,

Because YOUR GOVERNMENTS (R1 and R3) want it that way. Been that way since before WW2.

>and so we can't work the states without spilt

If you think digital is bad, what do you think would happen with SSB?

>IMHO the best thing to do is open 7.050-7.100 for ssb in the U.S. and move
>the digital stuff to the old novice band.

Uh huh. Then it will be SSB and AM from the USA clobbering you instead of digital. Guess which group tends to run more power? The US power limit is 1500 W peak output.

One of the main reasons the US has limited 'phone bands is to give those outside the US a place to work without being clobbered by high powered US 'phones.

R1 and R3 are supposed to get 7100-7200 over the next few years, and the SWBC move out.

>Why not, 8 years ago, the Arrl did a survey.

That's pretty close - 1996

> They asked amateurs who had
>passed a morse code exam if they EVER used morse code.

No, you are mistaken. On several counts.

They asked 1100 US hams, chosen at random. Of these, 100 were Novices and 200
each Techs, Tech Pluses, Generals, Advanceds and Extras. So they asked hams who
had not taken a code test as well as hams who had.

The question was "How much do you operate Morse code?" and there were only
three possible answers: "Regularly", "Rarely" and "Never". No definitions of
what those terms mean, no questions on other modes, etc. (After all, a ham who
is not on the air at all never uses Morse code on the air).

>Two out of three
>responded "no". I.e. 2/3's of the hams surveyed NEVER used morse code.

Wrong again!

35% answered "Never"
37% answered "Rarely"
27% answered "Regularly"
1% did not answer.

It is obvious that the question is so flawed as to be meaningless. For example,
how much Morse operation is "regular"?

Note that the question doesn't specify HF operation, or ask if the ham is
active at all, if he/she is equipped for HF operation, etc. etc.

>Of course in those days they spun it as "1 out 3 sometimes uses morse code".

Wrong again!

64% (37+27) sometimes use Morse code, according to that survey. That's a fact,
not spin.
>

>So if it came to a vote you'd have a hard time keeping things as they are.

Maybe.

Try this "survey": Actually listen to the CW/digital subbands and see how much activity there really is. Try 40 meters below 7050 some evening.

>I thought you told us that hams don't homebrew gear.

I guess VHF/UHF/Microwave or QRP clubs do.

>What would you expect hams to talk about a ham radio club meeting?

It was an operating event, not a club meeting.

I did not expect them to be similar to other clubs. When I asked different people about their setup, he seemed busy and not wanting to talk about it. If it was me, I would happily explain what I made, brag about it, show interested people schematics, share technical info, etc.

>However, the technical person
>> would feel out of place there.
>
>You mean around the homebrew microwave gear?

Yes, once they were setup, they were much the same as the non-homebrewing Ham.

>Are you telling us that they sat around conversing with each other by
>using their homebrew microwave gear while at the meeting?

They contacted other Hams, not the same hams that were at the gathering, of course.

>> What is is about Ham radio that makes you want to eat
>> alot?
>
>Oh, you believe that amateur radio causes overeating. Ever hang around
>a Burger King?

Okay, it was not a random group (they were a VHF/UHF/Microwave club), but it was still Hams. And this trend occurs at several Ham radio events. Such events require little physical activity. Also, people often eat unhealthy food at these events. This could be a good reason for the tendency to weigh more.

>> Most do not like the
>> technical aspect, either. You'll find that at any random Ham Radio
>gathering or
>> event.
>
>You don't know anything about what most do.

Sure, I have not taken a poll. But isn't it foolish to believe otherwise when you always encounter is anti-social, non technical people? I "let" my club

membership expire. If I am missing a segment that fits what I am looking for, I would like to know about it and I would join that type of club.

Facts (and spin) are in the eye of the beholder, Jim. Your "64%
sometimes use Morse code" is trumped by the fellow who uses the same
numbers to factually state that "72% (35+37) of the hams surveyed rarely
or never use Morse code".

While in Europe as DA2LJ I operated 40 meters. My experience was that the 'broadcast' stations were skipping over me. And were not really a problem for me in Germany.

However on this side of the pond it is a serious problem.

Just my observations.

Yep for a 'so called dead mode' (cw) there sure seems to be a LOT of
activity in the real world.

Hi Dave,

You kinda conveniently left out "Well, along with the fact that now I realize what an idiot I was being." I believe that pretty much answers your last query. We ALL make foolish errors in our youth and most of us eventually grow up, hopefully, wiser for the wear. It's got sump'n to do with casting the first stone or some such saying. ;-)

Dan, I've never treated you in any way that warrants you telling me, "thanks for dumbing down the ARS." You're comments are those of someone who acts like a jerk, walks like a jerk, and probably is a jerk. So, if you're going to be a jerk, yes, you are an asshole.

I don't treat everyone like that. You seem to...except those who "think" just like you do--if that's what you call it these days. You know what? You're a bigger jerk than Larry.

Absolutely! The only reason I don't kill someone is because I don't believe
in killing; not because it's illegal. Do you only refrain from doing things
because they are illegal? You really should get out of that book!

Dee, I can understand that kind of sentiment for things other than "hobby"
or "interest" related items. Perhaps those who chose to wait until testing
philosophies met their expectations/requirements/likes, did so because they
were very busy succeeding at financial matters, like work, family, church,
etc.?

I don't know, Larry. But why would you take even more time to study--even
minimal requirements--when you already have a degree you don't utilize? It
would take a lot less time and effort if you just use that degree and get a
job with it.

You wouldn't use it any way, so it probably doesn't matter. But, if you
want to wait, you go right ahead.

(yeah... off-topic but I am a fan of both shows mentioned)

I just had a interesting though in relation to that television show.....
Since Briscoe on "Law and Order" and Sipowitz on "NYPD Blue" both can't seem
to keep a partner, I think it would be cool to see the series where they are
both partners eh?

I call it a two-class system, "Basic" and "Standard", each of which could be endorsed for HF operation upon passing a 5WPM Morse exam. If it suits your agenda, feel free to call that four classes.

> The only incentive offered for more
> technical tests is more power.

Incentive? I consider incentive licensing to be a spectaculure failure, mostly an attempt at "social engineering" by ARRL/FCC, and my proposal is not based on "incentives". The difference in power levels is based on safety issues --- the Basic test material probably would not prepare a licensee to safely deal with "full gallon" powered stations. (As an aside, I do not belive the current Technican exam prepares an applicant for these power levels either.)

Then rather than demanding a change of requirements, then they should wait to pursue the hobby until they have time for it. I've many times put a variety of things on hold for higher priorities such as family and job. I didn't expect the rest of the world to change because of my wants.

No one has as much time available as they would like so they have to make choices. That's true in all aspects of one's life including hobbies.

Should I really expect to be first chair clarinet in our community band (a voluntary hobby group) when I don't put in the time to practice enough to be good enough. No. Same with other hobby activities. Wanting something, even in a hobby, is not sufficient. You've got to put in the effort.

That is something I have observed as well..... kinda like the addage, "I am
a ham operator, I have friends all over the world, but none in my backyard!"
I believe (IMHO) that we should work outward from where we are getting to
know our nieghbors first, and working out like the ripples in a pond after a
rock is thrown into it. My personal preference is to get to know a person
for who they are, what they are passionate and interested about,
likes/dislikes etc., for the times when I am not operating in a public
service/emergency communications setting.

(seriously asking this question)
So if a person is getting into technical research, project building of any kind (generically speaking), or any other strong contribution to amateur radio, but DOES like to "yakking into a microphone" whilst on the air is a bad thing?

Just curious,

Ya know, I actually see that comment as kinda funny..... At least in my area, as I cannot speak for the country as a whole, I am seeing a 100-300% increase in the foreclosure notices in the newspapers around here. Surprisingly I saw one where the final debt was only like 8000 bucks! And of course I have seen quite a few in the $200,000-350,000 range as well, but do not feel sorry for those elitist, yuppie a$$holes who purchase way beyond their means.

So you don't believe in killing someone (which is illegal) but you
didn't mind bootlegging on the radio (which is illegal). You believe in
one but not the other. You'd have us believe that it is a simple matter
of personal choice.

If you believed in killing someone (which is illegal), the legality
wouldn't matter to you by your logic. Society's rules are the ones
which count, Kim.

The last decade or so? I can confirm that the military used the term at least as far back as 1968. It appears in DOS material dating back at least forty years. COMSEC refers not only to "any means of encryption" but the equipment used for carrying out the secure communications.

Subj: [CLARC] FCC Memorandum Opinion & Order (FCC Docket 03-175)
Date: 7/21/2003 10:20:26 PM Central Daylight Time

This was taken from today's FCC Daily Digest. Edited for readability by N0JAA.

AMENDMENT OF PART 15 OF THE COMMISSION'S RULES TO ALLOW CERTIFICATION OF EQUIPMENT IN THE 24.05 - 24.25 GHZ BAND AT FIELD STRENGTHS UP TO 2500 MV/M.
Denied the Petition for Reconsideration filed by the National Association for Amateur Radio (ARRL) in response to our Report and Order in this proceeding. (Dkt. No. 98-156). Action by: the Commission.
Adopted: 07/15/2003 by MO&O. (FCC No. 03-175). OET

Pages 1--6 from Microsoft Word - 29580
Federal Communications Commission FCC 03- 175
Before the Federal Communications Commission
Washington, D. C. 20554

In the matter of Amendment of Part 15 of the Commission’s Rules
to allow certification of equipment in the 24.05 – 24.25 GHz band
at field strengths up to 2500 mV/ m

ET Docket No. 98- 156

MEMORANDUM OPINION AND ORDER
Adopted: July 15, 2003 Released: July 21, 2003
By the Commission:

INTRODUCTION
1. By this memorandum opinion and order, we deny the petition for reconsideration filed by the National Association for Amateur Radio (ARRL) [1] in response to our Report and Order in this proceeding. [2] We affirm the decision to allow the unlicensed operation under Part 15 of the Rules of fixed point-to-point transmitters in the 24.05 - 24.25 GHz band at field strengths up to 2500 mV/m. We reject ARRL’s argument that such operation will result in an increased risk of interference to licensed amateur operations.

BACKGROUND
2. In the Report and Order, the Commission amended Part 15 of the Rules to allow unlicensed operation of fixed point-to-point transmitters in the 24.05 - 24.25 GHz band with field strengths up to 2500 mV/m. [3] The Commission also adopted strict frequency stability requirements to limit out-of-band emissions to minimal levels. [4] The Commission further decided that such devices must use directional antennas with gains of at least 33 dBi or a main lobe beamwidth not exceeding 3.5 degrees. [5] In taking this action, the Commission concluded that it is in the public interest to allow such operation

on an unlicensed basis to supplement the growing demand for licensed point-to-point facilities that satisfy important communications needs.

Notes

[1] Petition for reconsideration filed by the National Association for Amateur Radio (ARRL), also known as The American Radio Relay League, Incorporated.

[2] Amendment of Part 15 of the Commission’s Rules to allow certification of equipment in the 24.05 – 24.25 GHz band at field strengths up to 2500 mV/m, ET Docket No. 98-156, Report and Order, 16 FCC Record 22, 337 (2001).

[3] Report and Order at ¶7. 47 CFR § 15.249 (b)(1).

[4] Id. at ¶15. 5 Id., 47 CFR § 15.249 (b)(3). The Commission also licenses transmitters in the 24.05 - 24.25 GHz band under Part 90 of the Rules. 47 C. F. R. § 90. 103.

For example, the Commission concluded that increasing the field strength limit would promote greater use of Part 15 unlicensed devices for emergency restoration of communications in disaster situations, low-cost telecommunications delivery in rural areas, and other beneficial applications.

3. The Commission declined to adopt ARRL's proposal to require manufacturers to maintain detailed records of unlicensed transmitter installations operating with the parameters authorized in this proceeding and to supply this information periodically to ARRL for coordination purposes. It found that ARRL had failed to demonstrate a sufficient potential for interference or to provide any other basis for such a requirement. The Commission also reaffirmed its initial decision to exclude the 24.00 – 24.05 GHz sub- band due to the potential interference to primary amateur satellite operations and the uncertain operating
characteristics of future amateur satellites in that band.

DISCUSSION
4. Petition for reconsideration. In its petition, ARRL argues that the power level and antenna gain/ beamwidth figures adopted in the Report and Order for fixed point-to-point equipment operating in the 24.05 - 24.25 GHz band are inappropriate for unlicensed operation under Part 15 due to the potential for interference to licensed amateur services. [6] In particular, ARRL is concerned about interference to the terrestrial amateur weak-signal stations that operate at 24.192 GHz within the 24.05 – 24.25 GHz band and notes that these stations utilize the same sensitive receivers as do amateur satellite communications in the 24.00 – 24.05 GHz sub band. ARRL contends that

unlicensed fixed point-to-point operation in the 24.05 - 24.25 GHz band with 2500 mV/m and antenna gains of 33 dBi will create a "significant interference potential" to these licensed amateur services. [7] While admitting in their reply that it is proper for the Commission to make a determination of interference potential in each case, [8] ARRL asserts that the Commission improperly drew the line in this proceeding. [9] ARRL argues that the Commission's authority to authorize unlicensed operation under Part 15 is limited by Section 301 [10] of the Communications Act to instances where the Commission finds that there is not a "substantial" or "significant interference potential" to licensed services. [11] ARRL further argues that Section 302 (a) [12] obligates the Commission to limit the interference potential of RF devices, and creates no exception to the Section 301 licensing requirement for devices that have significant potential for interference to licensed radio services. [13] ARRL contends that if a RF device is found by the Commission to have a significant

---

interference potential, it is improper for the Commission to rely upon the requirement to cease operation under Section 15.5(c) [14] in cases where harmful interference is being caused. [15] It also asserts that devices such as those authorized in this proceeding

serve the same function as licensed point-to-point microwave services, and therefore require individual licenses. [16] Finally, ARRL requests that we “reconsider and reverse the portion of the Report and Order that addresses the Commission’s jurisdiction to authorize unlicensed operation of radio devices which have significant potential for interference to licensed radio services pursuant to Section 302(a) of the Communications Act...” [17]

5. On the other hand, as clarified in its reply, ARRL explicitly states that it does not challenge the Commission's general authority to authorize unlicensed operations under Part 15. ARRL also concurs that the Commission can make reasonable regulations regarding Part 15 devices pursuant to Section 302(a) of the Act. [18] Indeed, ARRL notes that it takes no issue with the bulk of the Part 15 decisions made by the Commission over the years. [19] ARRL states its belief that, below some interference potential, it is appropriate for the Commission to authorize unlicensed operation under Part 15. [20] In particular, ARRL accedes that the question of where to draw the line between licensed operation under Section 301 and unlicensed operation under Part 15 is "not a fixed, bright-line determination premised on an ERP or EIRP level, or a fixed field strength.” [21] ARRL further states that the line is "dependent in every case on those factors, plus, for example, duty cycle, bandwidth, antenna gain or loss, emission type, deployment area, and the number of devices to be deployed." Finally, ARRL acknowledges that "the Commission is the proper authority to draw the line in each instance, just as it does now."

6. Opposition. In opposition to the petition for reconsideration, the IEEE Project 802 Local and Metropolitan Area Network Committee (IEEE 802) and the Information Technology Industry Council (ITI) argue that the Commission properly concluded that the potential for interference to licensed services from the systems authorized by the Report and Order is sufficiently low to allow their operation under Part 15. [22] ITI argues that, unlike the 24.0 – 24.05 GHz band, which is designated primarily for amateur satellite operation, the 24.05 – 24.25 GHz band is shared with Radio Location Services, Earth Satellite Services, Part 90 Private Land Mobile devices, Part 18 Industrial, Scientific and Medical (ISM) equipment, and Part 15.249 radio devices. [23] ITI notes that the systems authorized in the Report and Order for unlicensed operation under Part 15 in this frequency range are highly directional point-to-point systems. Consequently, ITI argues that, even operating at 2500 mV/m using narrow beam directional antennas, these line-of-sight systems, should not pose any undue or significant threat to licensed amateur operation. Opponents also uniformly disagree with ARRL's interpretation that Section 301 posits a bright-line "significant interference potential" threshold for requiring individual licensing. They argue that the Commission properly exercised its authority in the Report and Order to authorize unlicensed operation under Part 15 in this proceeding.

Notes

[14] Section 15.5(c) states: “The operator of a radio frequency device shall be required to cease operating the device upon notification by a Commission representative that the device is causing harmful interference. Operation shall not resume until the condition causing the harmful interference has been corrected.” 47 USC § 15.5(c).

7. Decision. At its most fundamental level, ARRL asserts that the Commission improperly concluded in the Report and Order that the unlicensed operation authorized therein would not create an increased risk of interference to licensed amateur services. Specifically, ARRL argues that unlicensed point-to-point operation in the 24.05 – 24.25 GHz band at 2500 mV/m creates a “significant” or “substantial” interference potential to licensed amateur services. We reject that proposition and, in doing so, also find the remainder of ARRL's petition to be without merit.

8. We affirm the central technical finding made in the Report and Order, namely, that devices having field strengths up to 2500 mV/m and conforming to the specified directional antenna requirements are suitable for unlicensed operation under Part 15 in the 24.05 – 24.25 GHz band. In particular, we affirm the conclusion that devices operating within these requirements will not increase the interference potential to licensed amateur services in the band. [24] The Commission found that the use of a directional antenna would change the shape of the radiated field but not increase the total geographic area being radiated. In other words, while signals will travel further along the narrow path of intended communication, the signals will be limited in all other directions. [25] The Commission found support for this rationale in other proceedings which find that a directional antenna requirement would ensure that the area over which harmful interference can occur is equivalent to what would be caused by a transmitter using an omni- directional antenna operating at a lower output power. [26] The Commission further rejected arguments by ARRL that the decision strayed from an earlier Commission decision in Docket No. 79-337 that denied a request to allow low power, fixed systems in the 24.05 - 24.25 GHz band. [27] In light of the much higher transmitter output power levels involved

in that proceeding (up to 100 mW, as compared with typically less than 1 mW herein), the Commission found that the interference concerns addressed in Docket No. 79-337 were significantly greater that those at issue in this proceeding.

9. Due to the very narrow transmit antenna beamwidth authorized in this proceeding, an amateur receive antenna is highly unlikely to be illuminated by an unlicensed transmitting antenna unless the two antennas are oriented in direct alignment. In the event that a boresight alignment occurs, any interference that might result should be readily identified for remedial action because of the fixed nature of the unlicensed operation authorized in this proceeding. Furthermore, as noted in the Report and Order, Part 15 field disturbance sensors are already permitted to operate at field strengths up to 2500 mV/m in the 24.075 - 24.175 GHz band segment. [28] These devices have been authorized for years with no adverse impact on other users in the band, including amateur operations. [29] Consequently, we agree with ITI that these line- of- sight systems authorized in the Report and Order, even operating at 2500 mV/m using narrow beam directional antennas, should not pose any undue or significant threat to licensed amateur operations. [30]

10. ARRL presents no new information concerning the interference potential of the devices authorized in the Report and Order and merely reargues its contention that the interference potential is so

great as to be inappropriate for unlicensed status under Part 15. We find that ARRL’s arguments do little more than disagree with the technical analysis and conclusions in the Report and Order concerning the interference potential of the operation authorized therein. Bare disagreement, absent new facts and arguments, is insufficient grounds for granting reconsideration. [31] Furthermore, petitions for reconsideration are not granted for the purpose of altering our basic findings or debating matters that have been fully considered and substantively settled. [32] The resolution of the issue regarding the

interference potential of operation with 2500 mV/m has been the central question of this rule making from the outset. Full opportunity for all affected parties to comment has been afforded and we have fully considered all relevant matters in the record. In the absence of any new information, and in light of our review herein of the analysis and judgments made in the Report and Order, we find ARRL’s arguments about the increased interference potential to be repetitive and without merit.

11. According to ARRL, Section 301 of the Act requires individual licensing whenever there is a finding by the Commission of a significant interference potential to licensed services. Consequently, under ARRL’s interpretation of our statutory authority, the purported violation of Section 301 has no basis unless we accept ARRL's proposition that the interference potential with 2500 mV/m is so high in this particular case as to be inappropriate for unlicensed operation under Part 15. As affirmed above, we reject the assertion that there is a significant interference potential from the unlicensed operation authorized in the Report and Order. Because we find no such significant interference potential, we need not reach ARRL’s statutory argument.

12. ARRL also asserts that devices such as those authorized in this proceeding may be used to serve the same function as licensed point-to- point microwave services, and therefore must be licensed. [33] However, ARRL provides no support or rationale for the proposition that a device is per se disqualified from unlicensed operation solely because it may be used for a similar function as provided by another service that might be licensed. We find ARRL's contention in that regard to be without merit.

13. Finally, ARRL requests “that the Commission reconsider and reverse that portion of the Report and Order which addresses the Commission’s jurisdiction to authorize the unlicensed operation of radio frequency devices which have significant potential for interference to licensed radio services, pursuant to Section 302 (a) of the Communications Act...” [34] Citing paragraph 12 of the Report and Order, ARRL argues that “... the Commission is incorrect in its assumption that it has unfettered jurisdiction pursuant to Section 302(a) of the Communications Act to authorize unlicensed devices, regardless of the interference potential of those devices to licensed radio services.” [35]

14. We reject ARRL’s characterization of the Commission’s decision in the Report and Order. In paragraph 12 of the Report and Order, the Commission cited Section 302 of the Act as a basis for our authority to adopt rules governing unlicensed operations under Part 15. By way of explaining that authority, the Commission noted that the operating requirements of Part 15 appropriately provide a means for allowing unlicensed devices to share spectrum with licensed services with little risk of interference to licensed services.

Notes

[31] See, e.g., Regulatory Policy Regarding the Direct Broadcast Satellite Service, Memorandum Opinion and Order, 94 FCC 2d 741, 747-748 (1983) (citing, e.g., WWIZ, Inc., 37 FCC 685, 686 (1964), aff'd sub nom., Lorain Journal Co. v. FCC, 351 F. 2d 824 (DC Cir. 1965), cert. denied, 383 US 967 (1966); Florida Gulfcoast Broadcasters, Inc., 37 FCC 833 (1964); Employment Practices of Stations -- Charlotte, NC Market, 77 FCC 2d 1 (1980); WEOK Broadcasting, 4 Rad. Reg. 2d (P&F) 503 (1965)).

[33] ARRL petition at i and 24.
[34] Id. at 1.
[35] Id. at 4 - 5. 5

Page 6

Significantly, ARRL concurs in its reply that it is appropriate for the Commission to make reasonable regulations regarding Part 15 devices pursuant to Section 302(a) of the Act. [36] The technical operating parameters adopted in the Report and Order are designed to ensure that the interference risk will not be increased to licensed amateur services and we affirm that the rules adopted in the Report and Order are reasonable for regulating the unlicensed operation that was authorized under Part 15 in this proceeding. ORDERING CLAUSES

15. Accordingly, IT IS ORDERED that pursuant to Sections 4(i), 302, 303(e) 303(f), 303(g), 303(r) and 405 of the Communications Act of 1934, as amended, 47 USC §§ 154(i), 302, 303(e), 303(f), 303(g) and 405, the petition for reconsideration filed by ARRL IS DENIED.

16. IT IS FURTHER ORDERED that the proceeding in ET Docket No. 98-156 IS TERMINATED. FEDERAL COMMUNICATIONS COMMISSION Marlene H. Dortch Secretary

What has that to do with amateur radio? You've mentioned your
commercial license (issued in 1956) so many times that you can only be
attempting to impress hams. Wow, Len. I'm impressed.

> I've never expressed any real intent to get an amateur radio license in
> here.

Why certainly you have, Leonard. You've told us on a number of
occasions of your interest dating back several decades. You told us
just a few years ago that you were going for an "Extra right out of the
box". So are we to believe your earlier statements or this one?

> My involvement is to eliminate the US code test for any radio
> license examination. It's as simple as that.

Well, it is as peculiar as that.

Fine, Vipul. Then those hams present with you must not have talked to
each other or to you. If they did otherwise, there was social
interaction. I've worked several hams in India any number of times over
the past couple of decades. I've never met them in person nor have I
telephoned them to chat and ask of their families. By your definition,
I'm anti-social.
